Introduction

FROM the moment when, through the courtesy of my friend Barrett Wendell, I came first to know Mr. Henry Adams's book, *Mont-Saint-Michel and Chartres*, I was profoundly convinced that this privately printed, jealously guarded volume should be withdrawn from its hiding-place amongst the bibliographical treasures of collectors and amateurs and given that wide publicity demanded alike by its intrinsic nature and the cause it could so admirably serve.

To say that the book was a revelation is inadequately to express a fact; at once all the theology, philosophy, and mysticism, the politics, sociology, and economics, the romance, literature, and art of that greatest epoch of Christian civilization became fused in the alembic of an unique insight and precipitated by the dynamic force of a personal and distinguished style. A judgment that might well have been biased by personal inclination received the endorsement of many in two continents, more competent to pass judgment, better able to speak with authority; and so fortified, I had the honour of saying to Mr. Adams, in the autumn of 1912, that the American Institute of Architects asked the distinguished privilege of arranging for the publication of an edition for general sale, under its own imprimatur. The result is the volume now made available for public circulation.

In justice to Mr. Adams, it should be said that such publication is, in his opinion, unnecessary and uncalled-for, a con-

clusion in which neither the American Institute of Architects, the publishers, nor the Editor concurs. Furthermore, the form in which the book is presented is no affair of the author, who, in giving reluctant consent to publication, expressly stipulated that he should have no part or parcel in carrying out so mad a venture of faith — as he estimated the project of giving his book to the public.

In this, and for once, his judgment is at fault. *Mont-Saint-Michel and Chartres* is one of the most distinguished contributions to literature and one of the most valuable adjuncts to the study of mediaevalism America thus far has produced. The rediscovery of this great epoch of Christian civilization has had issue in many and valuable works on its religion, its philosophy, its economics, its politics, and its art, but in nearly every instance, whichever field has been traversed has been considered almost as an isolated phenomenon, with insufficient reference to the other aspects of an era that was singularly united and at one with itself. Hugh of Saint Victor and Saint Thomas Aquinas are fully comprehensible only in their relationship to Saint Anselm, Saint Bernard, and the development of Catholic dogma and life; feudalism, the crusades, the guilds and communes weave themselves into this same religious development and into the vicissitudes of crescent nationalities; Dante, the cathedral builders, the painters, sculptors, and music masters, all are closely knit into the warp and woof of philosophy, statecraft, economics, and religious devotion; indeed, it may be said that the Middle Ages, more than any other recorded epoch of history, must be considered *en bloc*, as a period of consistent unity as highly emphasized as was its dynamic force.

It is unnecessary to say that Mr. Adams deals with the art of the Middle Ages after this fashion: he is not of those who would determine every element in art from its material antecedents. He realizes very fully that its essential element, the thing that differentiates it from the art that preceded and that which followed, is its spiritual impulse; the manifestation may have been, and probably was, more or less accidental, but that which makes Chartres Cathedral and its glass, the sculptures of

Rheims, the *Dies Irae*, *Aucassin and Nicolette*, the *Song of Roland*, the Arthurian Legends, great art and unique, is neither their technical mastery nor their fidelity to the enduring laws of all great art — though these are singular in their perfection — but rather the peculiar spiritual impulse which informed the time, and by its intensity, its penetrating power, and its dynamic force wrought a rounded and complete civilization and manifested this through a thousand varied channels.

Greater, perhaps, even than his grasp of the singular entirety of mediaeval civilization, is Mr. Adams's power of merging himself in a long dead time, of thinking and feeling with the men and women thereof, and so breathing on the dead bones of antiquity that again they clothe themselves with flesh and vesture, call back their severed souls, and live again, not only to the consciousness of the reader, but before his very eyes. And it is not a thin simulacrum he raises by some doubtful alchemy: it is no phantasm of the past that shines dimly before us in these magical pages; it is the very time itself in which we are merged. We forgather with the Abbot and his monks, and the crusaders and pilgrims in the Shrine of the Archangel: we pay our devoirs to the fair French Queens — Blanche of Castile, Eleanor of Aquitaine, Mary of Champagne — fighting their battles for them as liege servants: we dispute with Abélard, Thomas of Aquino, Duns the Scotsman: we take our parts in the Court of Love, or sing the sublime and sounding praises of God with the Canons of Saint Victor: our eyes opened at last, and after many days we kneel before Our Lady of Pity, asking her intercession for her lax but loyal devotees. Seven centuries dissolve and vanish away, being as they were not, and the thirteenth century lives less for us than we live in it and are a part of its gaiety and light-heartedness, its youthful ardour and abounding action, its childlike simplicity and frankness, its normal and healthy and all-embracing devotion.

And it is well for us to have this experience. Apart from the desirable transformation it effects in preconceived and curiously erroneous superstitions as to one of the greatest eras in all history, it is vastly heartening and exhilarating. If it gives

new and not always flattering standards for the judgment of contemporary men and things, so does it establish new ideals, new goals for attainment. To live for a day in a world that built Chartres Cathedral, even if it makes the living in a world that creates the 'Black Country' of England or an Iron City of America less a thing of joy and gladness than before, equally opens up the far prospect of another thirteenth century in the times that are to come and urges to ardent action toward its attainment.

But apart from this, the deepest value of *Mont-Saint-Michel and Chartres*, its importance as a revelation of the eternal glory of mediaeval art and the elements that brought it into being is not lightly to be expressed. To every artist, whatever his chosen form of expression, it must appear unique and invaluable, and to none more than the architect, who, familiar at last with its beauties, its power, and its teaching force, can only applaud the action of the American Institute of Architects in making Mr. Adams an Honorary Member, as one who has rendered distinguished services to the art, and voice his gratitude that it has brought the book within his reach and given it publicity before the world.

Preface

[December, 1904.]

Some old Elizabethan play or poem contains the lines:

> ... Who reads me, when I am ashes,
> Is my son in wishes .....

The relationship, between reader and writer, of son and father, may have existed in Queen Elizabeth's time, but is much too close to be true for ours. The utmost that any writer could hope of his readers now is that they should consent to regard themselves as nephews, and even then he would expect only a more or less civil refusal from most of them. Indeed, if he had reached a certain age, he would have observed that nephews, as a social class, no longer read at all, and that there is only one familiar instance recorded of a nephew who read his uncle. The exception tends rather to support the rule, since it needed a Macaulay to produce, and two volumes to record it. Finally, the metre does not permit it. One may not say: 'Who reads me, when I am ashes, is my nephew in wishes.'

The same objections do not apply to the word 'niece.' The change restores the verse, and, to a very great degree, the fact. Nieces have been known to read in early youth, and in some cases may have read their uncles. The relationship, too, is convenient and easy, capable of being anything or nothing, at the will of either party, like a Mohammedan or Polynesian or American marriage. No valid objection can be offered to this change in the verse. Niece let it be!

The following pages, then, are written for nieces, or for those who are willing, for the time, to be nieces in wish. For convenience of travel in France, where hotels, in out-of-the-way places, are sometimes wanting in space as well as luxury, the nieces shall count as one only. As many more may come as like, but one niece is enough for the uncle to talk to, and one niece is much more likely than two to listen. One niece is also more likely than two to carry a kodak and take interest in it, since she has nothing else, except her uncle, to interest her, and instances occur when she takes interest neither in the uncle nor in the journey. One cannot assume, even in a niece, too emotional a nature, but one may assume a kodak.

The party, then, with such variations of detail as may suit its tastes, has sailed from New York, let us say, early in June for an entire summer in France. One pleasant June morning it has landed at Cherbourg or Havre and takes the train across Normandy to Pontorson, where, with the evening light, the tourists drive along the *chaussée*, over the sands or through the tide, till they stop at Madame Poulard's famous hotel within the Gate of the Mount.

The uncle talks:

MONT-SAINT-MICHEL AND CHARTRES

I. *Saint Michiel de la Mer del Peril*

THE Archangel loved heights. Standing on the summit of the tower that crowned his church, wings upspread, sword uplifted, the devil crawling beneath, and the ock, symbol of eternal vigilance, perched on his mailed foot, aint Michael held a place of his own in heaven and on earth hich seems, in the eleventh century, to leave hardly room for e Virgin of the Crypt at Chartres, still less for the Beau Christ the thirteenth century at Amiens. The Archangel stands for hurch and State, and both militant. He is the conqueror of atan, the mightiest of all created spirits, the nearest to God. is place was where the danger was greatest; therefore you find m here. For the same reason he was, while the pagan danger sted, the patron saint of France. So the Normans, when they ere converted to Christianity, put themselves under his power- l protection. So he stood for centuries on his Mount in Peril the Sea, watching across the tremor of the immense ocean— *mensi tremor oceani* — as Louis XI, inspired for once to poetry, scribed on the collar of the Order of Saint Michael which he eated. So soldiers, nobles, and monarchs went on pilgrimage his shrine; so the common people followed, and still follow, e ourselves.

The church stands high on the summit of this granite rock, d on its west front is the platform, to which the tourist ought st to climb. From the edge of this platform, the eye plunges wn, two hundred and thirty-five feet, to the wide sands or the

wider ocean, as the tides recede or advance, under an infinite sky, over a restless sea, which even we tourists can understand and feel without books or guides; but when we turn from the western view, and look at the church door, thirty or forty yards from the parapet where we stand, one needs to be eight centuries old to know what this mass of encrusted architecture meant to its builders, and even then one must still learn to feel it. The man who wanders into the twelfth century is lost, unless he can grow prematurely young.

One can do it, as one can play with children. Wordsworth, whose practical sense equalled his intuitive genius, carefully limited us to 'a season of calm weather,' which is certainly best; but granting a fair frame of mind, one can still 'have sight of that immortal sea' which brought us hither from the twelfth century; one can even travel thither and see the children sporting on the shore. Our sense is partially atrophied from disuse, but it is still alive, at least in old people, who alone, as a class, have the time to be young.

One needs only to be old enough in order to be as young as one will. From the top of this Abbey Church one looks across the bay to Avranches, and towards Coutances and the Cotentin — the *Constantinus pagus* — whose shore, facing us, recalls the coast of New England. The relation between the granite of one coast and that of the other may be fanciful, but the relation between the people who live on each is as hard and practical a fact as the granite itself. When one enters the church, one notes first the four great triumphal piers or columns, at the intersection of the nave and transepts, and on looking into M. Corroyer's architectural study which is the chief source of all one's acquaintance with the Mount, one learns that these piers were constructed in 1058. Four out of five American tourists will instantly recall the only date of mediaeval history they ever knew, the date of the Norman Conquest. Eight years after these piers were built, in 1066, Duke William of Normandy raised an army of forty thousand men in these parts, and in northern France, whom he took to England, where they mostly stayed. For a hundred and fifty years, until 1204, Normandy and Eng

and were united; the Norman peasant went freely to England with his lord, spiritual or temporal; the Norman woman, a very capable person, followed her husband or her parents; Normans held nearly all the English fiefs; filled the English Church; crowded the English Court; created the English law; and we know that French was still currently spoken in England as late as 1400, or thereabouts, 'After the scole of Stratford atte bowe.' The aristocratic Norman names still survive in part, and if we look up their origin here we shall generally find them in villages so remote and insignificant that their place can hardly be found on any ordinary map; but the common people had no surnames, and cannot be traced, although for every noble whose name or blood survived in England or in Normandy, we must reckon hundreds of peasants. Since the generation which followed William to England in 1066, we can reckon twenty-eight or thirty from father to son, and, if you care to figure up the sum, you will find that you had about two hundred and fifty million arithmetical ancestors living in the middle of the eleventh century. The whole population of England and northern France may then have numbered five million, but if it were fifty it would not much affect the certainty that, if you have any English blood at all, you have also Norman. If we could go back and live again in all our two hundred and fifty million arithmetical ancestors of the eleventh century, we should find ourselves doing many surprising things, but among the rest we should pretty certainly be ploughing most of the fields of the Cotentin and Calvados; going to mass in every parish church in Normandy; rendering military service to every lord, spiritual or temporal, in all this region; and helping to build the Abbey Church at Mont-Saint-Michel. From the roof of the Cathedral of Coutances over yonder, one may look away over the hills and woods, the farms and fields of Normandy, and so familiar, so homelike are they, one can almost take oath that in this, or the other, or in all, one knew life once and has never so fully known it since.

Never so fully known it since! For we of the eleventh century, hard-headed, close-fisted, grasping, shrewd, as we were, and as

Normans are still said to be, stood more fully in the centre of the world's movement than our English descendants ever did. We were a part, and a great part, of the Church, of France, and of Europe. The Leos and Gregories of the tenth and eleventh centuries leaned on us in their great struggle for reform. Our Duke Richard-Sans-Peur, in 966, turned the old canons out of the Mount in order to bring here the highest influence of the time, the Benedictine monks of Monte Cassino. Richard II, grandfather of William the Conqueror, began this Abbey Church in 1020, and helped Abbot Hildebert to build it. When William the Conqueror in 1066 set out to conquer England, Pope Alexander II stood behind him and blessed his banner. From that moment our Norman Dukes cast the Kings of France into the shade. Our activity was not limited to northern Europe, or even confined by Anjou and Gascony. When we stop at Coutances, we will drive out to Hauteville to see where Tancred came from, whose sons Robert and Roger were conquering Naples and Sicily at the time when the Abbey Church was building on the Mount. Normans were everywhere in 1066, and everywhere in the lead of their age. We were a serious race. If you want other proof of it, besides our record in war and in politics, you have only to look at our art. Religious art is the measure of human depth and sincerity; any triviality, any weakness cries aloud. If this church on the Mount is not proof enough of Norman character, we will stop at Coutances for a wider view. Then we will go to Caen and Bayeux. From there, it would almost be worth our while to leap at once to Palermo. It was in the year 1131 or thereabouts that Roger began the Cathedral at Cefalu and the Chapel Royal at Palermo; it was about the year 1174 that his grandson William began the Cathedral of Monreale. No art — either Greek or Byzantine, Italian or Arab — has ever created two religious types so beautiful, so serious, so impressive, and yet so different, as Mont-Saint-Michel watching over its northern ocean, and Monreale, looking down over its forests of orange and lemon, on Palermo and the Sicilian seas.

Down nearly to the end of the twelfth century the Norman

was fairly master of the world in architecture as in arms, although the thirteenth century belonged to France, and we must look for its glories on the Seine and Marne and Loire; but for the present we are in the eleventh century — tenants of the Duke or of the Church or of small feudal lords who take their names from the neighbourhood — Beaumont, Carteret, Gréville, Percy, Pierpont — who, at the Duke's bidding, will each call out his tenants, perhaps ten men-at-arms with their attendants, to fight in Brittany, or in the Vexin toward Paris, or on the great campaign for the conquest of England which is to come within ten years — the greatest military effort that has been made in western Europe since Charlemagne and Roland were defeated at Roncesvalles three hundred years ago. For the moment, we are helping to quarry granite for the Abbey Church, and to haul it to the Mount, or load it on our boat. We never fail to make our annual pilgrimage to the Mount on the Archangel's Day, October 16. We expect to be called out for a new campaign which Duke William threatens against Brittany, and we hear stories that Harold the Saxon, the powerful Earl of Wessex in England, is a guest, or, as some say, a prisoner or a hostage, at the Duke's Court, and will go with us on the campaign. The year is 1058.

All this time we have been standing on the *parvis*, looking out over the sea and sands which are as good eleventh-century landscape as they ever were; or turning at times towards the church door which is the *pons seclorum*, the bridge of ages, between us and our ancestors. Now that we have made an attempt, such as it is, to get our minds into a condition to cross the bridge without breaking down in the effort, we enter the church and stand face to face with eleventh-century architecture; a ground-plan which dates from 1020; a central tower, or its piers, dating from 1058; and a church completed in 1135. France can offer few buildings of this importance equally old, with dates so exact. Perhaps the closest parallel to Mont-Saint-Michel is Saint-Benoît-sur-Loire, above Orléans, which seems to have been a shrine almost as popular as the Mount, at the same time. Chartres was also a famous shrine, but of the Virgin,

and the west porch of Chartres, which is to be our peculiar pilgrimage, was a hundred years later than the ground-plan of Mont-Saint-Michel, although Chartres porch is the usual starting-point of northern French art. Queen Matilda's Abbaye-aux-Dames, now the Church of the Trinity, at Caen, dates from 1066. Saint Sernin at Toulouse, the porch of the Abbey Church at Moissac, Notre-Dame-du-Port at Clermont, the Abbey Church at Vézelay, are all said to be twelfth-century. Even San Marco at Venice was new in 1020.

Yet in 1020 Norman art was already too ambitious. Certainly nine hundred years leave their traces on granite as well as on other material, but the granite of Abbot Hildebert would have stood securely enough, if the Abbot had not asked too much from it. Perhaps he asked too much from the Archangel, for the thought of the Archangel's superiority was clearly the inspiration of his plan. The apex of the granite rock rose like a sugar-loaf two hundred and forty feet (73.6 metres) above mean sea-level. Instead of cutting the summit away to give his church a secure rock foundation, which would have sacrificed about thirty feet of height, the Abbot took the apex of the rock for his level, and on all sides built out foundations of masonry to support the walls of his church. The apex of the rock is the floor of the *croisée*, the intersection of nave and transept. On this solid foundation the Abbot rested the chief weight of the church, which was the central tower, supported by the four great piers which still stand; but from the croisée in the centre westward to the parapet of the platform, the Abbot filled the whole space with masonry, and his successors built out still farther, until some two hundred feet of stonework ends now in a perpendicular wall of eighty feet or more. In this space are several ranges of chambers, but the structure might perhaps have proved strong enough to support the light Romanesque front which was usual in the eleventh century, had not fashions in architecture changed in the great epoch of building, a hundred and fifty years later, when Abbot Robert de Torigny thought proper to reconstruct the west front, and build out two towers on its flanks. The towers were no doubt beautiful, if

one may judge from the towers of Bayeux and Coutances, but their weight broke down the vaulting beneath, and one of them fell in 1300. In 1618 the whole façade began to give way, and in 1776 not only the façade but also three of the seven spans of the nave were pulled down. Of Abbot Hildebert's nave, only four arches remain.

Still, the overmastering strength of the eleventh century is stamped on a great scale here, not only in the four spans of the nave, and in the transepts, but chiefly in the triumphal columns of the croisée. No one is likely to forget what Norman architecture was, who takes the trouble to pass once through this fragment of its earliest bloom. The dimensions are not great, though greater than safe construction warranted. Abbot Hildebert's whole church did not exceed two hundred and thirty feet in length in the interior, and the span of the triumphal arch was only about twenty-three feet, if the books can be trusted. The nave of the Abbaye-aux-Dames appears to have about the same width, and probably neither of them was meant to be vaulted. The roof was of timber, and about sixty-three feet high at its apex. Compared with the great churches of the thirteenth century, this building is modest, but its size is not what matters to us. Its style is the starting-point of all our future travels. Here is your first eleventh-century church! How does it affect you?

Serious and simple to excess! is it not? Young people rarely enjoy it. They prefer the Gothic, even as you see it here, looking at us from the choir, through the great Norman arch. No doubt they are right, since they are young: but men and women who have lived long and are tired — who want rest — who have done with aspirations and ambition — whose life has been a broken arch — feel this repose and self-restraint as they feel nothing else. The quiet strength of these curved lines, the solid support of these heavy columns, the moderate proportions, even the modified lights, the absence of display, of effort, of self-consciousness, satisfy them as no other art does. They come back to it to rest, after a long circle of pilgrimage — the cradle of rest from which their ancestors started. Even here they find the repose none too deep.

Indeed, when you look longer at it, you begin to doubt whether there is any repose in it at all — whether it is not the most unreposeful thought ever put into architectural form. Perched on the extreme point of this abrupt rock, the Church Militant with its aspirant Archangel stands high above the world, and seems to threaten heaven itself. The idea is the stronger and more restless because the Church of Saint Michael is surrounded and protected by the world and the society over which it rises, as Duke William rested on his barons and their men. Neither the Saint nor the Duke was troubled by doubts about his mission. Church and State, Soul and Body, God and Man, are all one at Mont-Saint-Michel, and the business of all is to fight, each in his own way, or to stand guard for each other. Neither Church nor State is intellectual, or learned, or even strict in dogma. Here we do not feel the Trinity at all; the Virgin but little; Christ hardly more; we feel only the Archangel and the Unity of God. We have little logic here, and simple faith, but we have energy. We cannot do many things which are done in the centre of civilization, at Byzantium, but we can fight, and we can build a church. No doubt we think first of the church, and next of our temporal lord; only in the last instance do we think of our private affairs, and our private affairs sometimes suffer for it; but we reckon the affairs of Church and State to be ours, too, and we carry this idea very far. Our church on the Mount is ambitious, restless, striving for effect; our conquest of England, with which the Duke is infatuated, is more ambitious still; but all this is a trifle to the outburst which is coming in the next generation; and Saint Michael on his Mount expresses it all.

Taking architecture as an expression of energy, we can some day compare Mont-Saint-Michel with Beauvais, and draw from the comparison whatever moral suits our frame of mind; but you should first note that here, in the eleventh century, the Church, however simple-minded or unschooled, was not cheap. Its self-respect is worth noticing, because it was short-lived in its art. Mont-Saint-Michel, throughout, even up to the delicate and intricate stonework of its cloisters, is built of granite. The

pts and substructures are as well constructed as the surfaces st exposed to view. When we get to Chartres, which is gely a twelfth-century work, you will see that the cathedral rc, too, is superbly built, of the hardest and heaviest stone hin reach, which has nowhere settled or given way; while, eath, you will find a crypt that rivals the church above. e thirteenth century did not build so. The great cathedrals r 1200 show economy, and sometimes worse. The world w cheap, as worlds must.

ou may like it all the better for being less serious, less heroic, militant, and more what the French call *bourgeois*, just as may like the style of Louis XV better than that of Louis V — Madame du Barry better than Madame de Montespan or taste is free, and all styles are good which amuse; but e we are now beginning with the earliest, in order to step vn gracefully to the stage, whatever it is, where you prefer top, we must try to understand a little of the kind of energy ch Norman art expressed, or would have expressed if it had ught in our modes. The only word which describes the man style is the French word *naïf*. Littré says that *naïf* ies from *natif*, as *vulgar* comes from *vulgus*, as though native ts must be simple, and commonness must be vulgar. Both se derivative meanings were strange to the eleventh century. veté was simply natural and vulgarity was merely coarse. man naïveté was not different in kind from the naïveté of gundy or Gascony or Lombardy, but it was slightly different xpression, as you will see when you travel south. Here at nt-Saint-Michel we have only a mutilated trunk of an enth-century church to judge by. We have not even a tde, and shall have to stop at some Norman village — at ton or Ouistreham — to find a west front which might suit Abbey here, but wherever we find it we shall find something ttle more serious, more military, and more practical than will meet in other Romanesque work, farther south. So, the central tower or lantern — the most striking feature of man churches — has fallen here at Mont-Saint-Michel, we shall have to replace it from Cérisy-la-Forêt, and

Lessay, and Falaise. We shall find much to say about the value of the lantern on a Norman church, and the singular power it expresses. We shall have still more to say of the towers which flank the west front of Norman churches, but these are mostly twelfth-century, and will lead us far beyond Coutances and Bayeux, from *flèche* to *flèche*, till we come to the flèche of all flèches, at Chartres.

We shall have a whole chapter of study, too, over the eleventh-century apse, but here at Mont-Saint-Michel, Abbot Hildebert's choir went the way of his nave and tower. He built out even more boldly to the east than to the west, and although the choir stood for some four hundred years, which is a sufficient life for most architecture, the foundations gave way at last, and it fell in 1421, in the midst of the English wars, and remained a ruin until 1450. Then it was rebuilt, a monument of the last days of the Gothic, so that now, standing at the western door, you can look down the church, and see the two limits of mediaeval architecture married together — the earliest Norman and the latest French. Through the Romanesque arches of 1058, you look into the exuberant choir of latest Gothic, finished in 1521. Although the two structures are some five hundred years apart, they live pleasantly together. The Gothic died gracefully in France. The choir is charming — far more charming than the nave, as the beautiful woman is more charming than the elderly man. One need not quarrel about styles of beauty, as long as the man and woman are evidently satisfied and love and admire each other still, with all the solidity of faith to hold them up; but, at least, one cannot help seeing, as one looks from the older to the younger style, that whatever the woman's sixteenth-century charm may be, it is not the man's eleventh-century trait of naïveté; — far from it. The simple, serious, silent dignity and energy of the eleventh century have gone. Something more complicated stands in their place; graceful, self-conscious, rhetorical, and beautiful as perfect rhetoric, with its clearness, light, and line, and the wealth of tracery that verges on the florid.

The crypt of the same period, beneath, is almost finer still

and even in seriousness stands up boldly by the side of the Romanesque; but we have no time to run off into the sixteenth century: we have still to learn the alphabet of art in France. One must live deep into the eleventh century in order to understand the twelfth, and even after passing years in the twelfth, we shall find the thirteenth in many ways a world of its own, with a beauty not always inherited, and sometimes not bequeathed. At the Mount we can go no farther into the eleventh as far as concerns architecture. We shall have to follow the Romanesque to Caen and so up the Seine to the Île de France, and across to the Loire and the Rhone, far to the South where its home lay. All the other eleventh-century work has been destroyed here or built over, except at one point, on the level of the splendid crypt we just turned from, called the Gros Piliers, beneath the choir.

There, according to M. Corroyer, in a corner between great constructions of the twelfth century and the vast Merveille of the thirteenth, the old refectory of the eleventh was left as a passage from one group of buildings to the other. Below it is the kitchen of Hildebert. Above, on the level of the church, was the dormitory. These eleventh-century abbatial buildings faced north and west, and are close to the present parvis, opposite the last arch of the nave. The lower levels of Hildebert's plan served as supports or buttresses to the church above, and must therefore be older than the nave; probably older than the triumphal piers of 1058.

Hildebert planned them in 1020, and died after carrying his plans out so far that they could be completed by Abbot Ralph de Beaumont, who was especially selected by Duke William in 1048, 'more for his high birth than for his merits.' Ralph de Beaumont died in 1060, and was succeeded by Abbot Ranulph, an especial favourite of Duchess Matilda, and held in high esteem by Duke William. The list of names shows how much social importance was attributed to the place. The Abbot's duties included that of entertainment on a great scale. The Mount was one of the most famous shrines of northern Europe. We are free to take for granted that all the great people of

Normandy slept at the Mount and, supposing M. Corroyer to be right, that they dined in this room, between 1050, when the building must have been in use, down to 1122 when the new abbatial quarters were built.

How far the monastic rules restricted social habits is a matter for antiquaries to settle if they can, and how far those rules were observed in the case of great secular princes; but the eleventh century was not very strict, and the rule of the Benedictines was always mild, until the Cistercians and Saint Bernard stiffened its discipline toward 1120. Even then the Church showed strong leanings toward secular poetry and popular tastes. The drama belonged to it almost exclusively, and the Mysteries and Miracle plays which were acted under its patronage often contained nothing of religion except the miracle. The greatest poem of the eleventh century was the 'Chanson de Roland,' and of that the Church took a sort of possession. At Chartres we shall find Charlemagne and Roland dear to the Virgin, and at about the same time, as far away as at Assisi in the Perugian country, Saint Francis himself — the nearest approach the Western world ever made to an Oriental incarnation of the divine essence — loved the French *romans*, and typified himself in the 'Chanson de Roland.' With Mont-Saint-Michel, the 'Chanson de Roland' is almost one. The 'Chanson' is in poetry what the Mount is in architecture. Without the 'Chanson,' one cannot approach the feeling which the eleventh century built into the Archangel's church. Probably there was never a day, certainly never a week, during several centuries, when portions of the 'Chanson' were not sung, or recited, at the Mount, and if there was one room where it was most at home, this one, supposing it to be the old refectory, claims to be the place.

Most pilgrims who come to the Mount
Enquire much and are quite right,
How the church was founded
At first, and established.
Those who tell them the story
That they ask, in memory
Have it not well, but fall in error
In many places, and misapprehension.
In order to make it clearly
Intelligible to those who have
No knowledge of letters, it has been turned
From the Latin, and wholly rendered
In Romanesque verses, newly,
Much in secret, for his convent,
By a youth; a monk he is of the Mount.
God in his kingdom grant him part!
William is his name, of Saint Pair
As is seen written in this book.
In the time of Robert of Torigny
Was this roman made and invented.

THESE verses begin the 'Roman du Mont-Saint-Michel,' and if the spelling is corrected, they still read almost as easily as Voltaire; more easily than Verlaine; nd much like a nursery rhyme; but as tourists cannot stop to ear their path, or smooth away the pebbles, they must be ted over the rough spots, even when roughness is beauty. ranslation is an evil, chiefly because every one who cares for ediaeval architecture cares for mediaeval French, and ought care still more for mediaeval English. The language of this

'Roman' was the literary language of England. William of Saint-Pair was a subject of Henry II, King of England and Normandy; his verses, like those of Richard Coeur-de-Lion, are monuments of English literature. To this day their ballad measure is better suited to English than to French; even the words and idioms are more English than French. Any one who attacks them boldly will find that the 'vers romieus' run along like a ballad, singing their own meaning, and troubling themselves very little whether the meaning is exact or not. One's translation is sure to be full of gross blunders, but the supreme blunder is that of translating at all when one is trying to catch not a fact but a feeling. If translate one must, we had best begin by trying to be literal, under protest that it matters not a straw whether we succeed. Twelfth-century art was not precise; still less 'précieuse,' like Molière's famous seventeenth-century prudes.

The verses of the young monk, William, who came from the little Norman village of Saint-Pair, near Granville, within sight of the Mount, were verses not meant to be brilliant. Simple human beings like rhyme better than prose, though both may say the same thing, as they like a curved line better than a straight one, or a blue better than a grey; but, apart from the sensual appetite, they chose rhyme in creating their literature for the practical reason that they remembered it better than prose. Men had to carry their libraries in their heads.

These lines of William, beginning his story, are valuable because for once they give a name and a date. Abbot Robert of Torigny ruled at the Mount from 1154 to 1186. We have got to travel again and again between Mont-Saint-Michel and Chartres during these years, but for the moment we must hurry to get back to William the Conqueror and the 'Chanson de Roland.' William of Saint-Pair comes in here, out of place, only on account of a pretty description he gave of the annual pilgrimage to the Mount, which is commonly taken to be more or less like what he saw every year on the Archangel's Day, and what had existed ever since the Normans became Christian in 912:

jorz iert clers e sanz grant vent.	The day was clear, without much wind.
meschines e les vallez	The maidens and the varlets
ascuns d'els dist verz ou sonnez.	Each of them said verse or song;
is li viellart revunt chantant	Even the old people go singing;
leece funt tuit semblant.	All have a look of joy.
i plus ne seit si chante *outree*	Who knows no more sings *Hurrah*,
Dex aie u *Asusee*.	Or *God help*, or *Up and On!*
jugleor la u il vunt	The minstrels there where they go
it lor vieles traites unt	Have all brought their viols;
z et sonnez vunt vielant.	Lays and songs playing as they go.
tens est beals la joie est grant.	The weather is fine: the joy is great:
palefrei e cil destrier	The palfreys and the chargers,
il roncin e cil sommier	And the hackneys and the packhorses
i errouent par le chemin	Which wander along the road
e menouent cil pelerin	That the pilgrims follow,
totes parz henissant vunt	On all sides neighing go,
la grant joie que il unt.	For the great joy they feel.
is par les bois chantouent tuit	Even in the woods sing all
oiselet grant et petit.	The little birds, big and small.
buef les vaches vunt muant	The oxen and the cows go lowing
les forez e repaissant.	Through the forests as they feed.
s e boisines e fresteals	Horns and trumpets and shepherd's pipes
leutes e chalemeals	And flutes and pipes of reed
noent si que les montaignes	Sound so that the mountains
retintoent et les pleignes.	Echo to them, and the plains.
e esteit dont les plaiseiz	How was it then with the glades
les forez e des larriz.	And with the forests and the pastures?
cels par a tel sonneiz	In these there was such sound
n si ce fust cers acolliz.	As though it were a stag at bay.
or le mont el bois follu	About the Mount, in the leafy wood,
travetier unt tres tendu	The workmen have tents set up:
es unt fait par les chemins.	Streets have made along the roads.
ntei i out de divers vins	Plenty there was of divers wines,
n e pastez fruit e poissons	Bread and pasties, fruit and fish,
els obleies veneisons	Birds, cakes, venison,
totes parz aveit a vendre	Everywhere there was for sale.
ez en out qui ad que tendre.	Enough he had who has the means to pay.

If you are not satisfied with this translation, any scholar of ench will easily help to make a better, for we are not studying ammar or archaeology, and would rather be inaccurate in ch matters than not, if, at that price, a freer feeling of the art

could be caught. Better still, you can turn to Chaucer, who wrote his Canterbury Pilgrimage two hundred years afterwards:

> Whanne that April with his shoures sote
> The droughte of March hath perced to the rote...
> Than longen folk to gon on pilgrimages
> And palmeres for to seken strange strondes...
> And especially, from every shires ende
> Of Englelonde, to Canterbury they wende
> The holy blisful martyr for to seke,
> That hem hath holpen whan that they were seke.

The passion for pilgrimages was universal among our ancestors as far back as we can trace them. For at least a thousand years it was their chief delight, and is not yet extinct. To feel the art of Mont-Saint-Michel and Chartres we have got to become pilgrims again: but, just now, the point of most interest is not the pilgrim so much as the minstrel who sang to amuse him — the *jugleor* or *jongleur* — who was at home in every abbey, castle or cottage, as well as at every shrine. The jugleor became a jongleur and degenerated into the street-juggler; the minstrel, or *menestrier*, became very early a word of abuse, equivalent to blackguard; and from the beginning the profession seems to have been socially decried, like that of a music-hall singer or dancer in later times; but in the eleventh century, or perhaps earlier still, the jongleur seems to have been a poet, and to have composed the songs he sang. The immense mass of poetry known as the 'Chansons de Geste' seems to have been composed as well as sung by the unnamed Homers of France, and of all spots in the many provinces where the French language in its many dialects prevailed, Mont-Saint-Michel should have been the favourite with the jongleur, not only because the swarms of pilgrims assured him food and an occasional small piece of silver, but also because Saint Michael was the saint militant of all the warriors whose exploits in war were the subject of the 'Chansons de Geste.' William of Saint-Pair was a priest-poet; he was not a minstrel, and his 'Roman' was not a *chanson*; it was made to read, not to recite; but the 'Chanson de Roland' was a different affair.

So it was, too, with William's contemporaries and rivals of

edecessors, the monumental poets of Norman-English literare. Wace, whose rhymed history of the Norman dukes, which called the 'Roman de Rou,' or 'Rollo,' is an English classic the first rank, was a canon of Bayeux when William of Saint-ir was writing at Mont-Saint-Michel. His rival Benoist, who ote another famous chronicle on the same subject, was also historian, and not a singer. In that day literature meant rse; elegance in French prose did not yet exist; but the elencies of poetry in the twelfth century were as different, in id, from the grand style of the eleventh, as Virgil was different om Homer.

William of Saint-Pair introduces us to the pilgrimage and the jongleur, as they had existed at least two hundred years fore his time, and were to exist two hundred years after him. all our two hundred and fifty million arithmetical ancestors io were going on pilgrimages in the middle of the eleventh ntury, the two who would probably most interest every one, er eight hundred years have passed, would be William the rman and Harold the Saxon. Through William of Saint-ir and Wace and Benoist, and the most charming literary nument of all, the Bayeux tapestry of Queen Matilda, we can ild up the story of such a pilgrimage which shall be as his-ically exact as the battle of Hastings, and as artistically true the Abbey Church.

According to Wace's 'Roman de Rou,' when Harold's father, rl Godwin, died, April 15, 1053, Harold wished to obtain release of certain hostages, a brother and a cousin, whom dwin had given to Edward the Confessor as security for his od behaviour, and whom Edward had sent to Duke William safe-keeping. Wace took the story from other and older rces, and its accuracy is much disputed, but the fact that rold went to Normandy seems to be certain, and you will see Bayeux the picture of Harold asking permission of King ward to make the journey, and departing on horseback, with hawk and hounds and followers, to take ship at Bosham, ur Chichester and Portsmouth. The date alone is doubtful. mmon sense seems to suggest that the earliest possible date

could not be too early to explain the rash youth of the aspirant to a throne who put himself in the power of a rival in the eleventh century. When that rival chanced to be William the Bastard, not even boyhood could excuse the folly; but Mr. Freeman, the chief authority on this delicate subject, inclined to think that Harold was forty years old when he committed his blunder, and that the year was about 1064. Between 1054 and 1064 the historian is free to choose what year he likes, and the tourist is still freer. To save trouble for the memory, the year 1058 will serve, since this is the date of the triumphal arches of the Abbey Church on the Mount. Harold, in sailing from the neighbourhood of Portsmouth, must have been bound for Caen or Rouen, but the usual west winds drove him eastward till he was thrown ashore on the coast of Ponthieu, between Abbéville and Boulogne, where he fell into the hands of the Count of Ponthieu, from whom he was rescued or ransomed by Duke William of Normandy and taken to Rouen. According to Wace and the 'Roman de Rou':

Guillaume tint Heraut maint jour	William kept Harold many a day,
Si com il dut a grant enor.	As was his due in great honour.
A maint riche torneiement	To many a rich tournament
Le fist aller mult noblement.	Made him go very nobly.
Chevals e armes li dona	Horses and arms gave him
Et en Bretaigne le mena	And into Brittany led him
Ne sai de veir treiz faiz ou quatre	I know not truly whether three or four times
Quant as Bretons se dut combattre.	When he had to make war on the Bretons.

Perhaps the allusion to rich tournaments belongs to the time of Wace rather than to that of Harold a century earlier, before the first crusade, but certainly Harold did go with William on at least one raid into Brittany, and the charming tapestry of Bayeux, which tradition calls by the name of Queen Matilda, shows William's men-at-arms crossing the sands beneath Mont-Saint-Michel, with the Latin legend: 'Et venerunt ad Montem Michaelis. Hic Harold dux trahebat eos de arena. Venerunt ad flumen Cononis.' They came to Mont-Saint-Michel, and Harold dragged them out of the quicksands. They came to the

er Couesnon. Harold must have got great fame by saving e on the sands, to be remembered and recorded by the Nor-ans themselves after they had killed him; but this is the affair historians. Tourists note only that Harold and William came the Mount: 'Venerunt ad Montem.' They would never have red to pass it, on such an errand, without stopping to ask the lp of Saint Michael.

If William and Harold came to the Mount, they certainly ned or supped in the old refectory, which is where we have n in wait for them. Where Duke William was, his jongleur — gleor — was not far, and Wace knew, as every one in Nor-ndy seemed to know, who this favourite was — his name, his aracter, and his song. To him Wace owed one of the most nous passages in his story of the assault at Hastings, where ke William and his battle began their advance against the glish lines:

llefer qui mult bien chantout	Taillefer who was famed for song,
un cheval qui tost alout	Mounted on a charger strong,
ant le duc alout chantant	Rode on before the Duke, and sang
Karlemaigne e de Rollant	Of Roland and of Charlemagne,
'Oliver e des vassals	Oliver and the vassals all
i morurent en Rencevals. "	Who fell in fight at Roncesvals.
ant il orent chevalchie tant	When they had ridden till they saw
as Engleis vindrent apreismant:	The English battle close before:
e,' dist Taillefer, 'merci!	'Sire,' said Taillefer, 'a grace!
os ai longuement servi.	I have served you long and well;
mon servise me devez.	All reward you owe me still;
se vos plaist le me rendez.	Today repay me if you please.
tot guerredon vos requier	For all guerdon I require,
vos voil forment preier	And ask of you in formal prayer,
eiez mei que io ni faille	Grant to me as mine of right
premier colp de la bataille.'	The first blow struck in the fight.'
lus respondi: 'Io l'otrei.'	The Duke answered: 'I grant.'

Of course, critics doubt the story, as they very properly ubt everything. They maintain that the 'Chanson de Roland' s not as old as the battle of Hastings, and certainly Wace ve no sufficient proof of it. Poetry was not usually written prove facts. Wace wrote a hundred years after the battle of stings. One is not morally required to be pedantic to the

point of knowing more than Wace knew, but the feeling of scepticism, before so serious a monument as Mont-Saint-Michel, is annoying. The 'Chanson de Roland' ought not to be trifled with, at least by tourists in search of art. One is shocked at the possibility of being deceived about the starting-point of American genealogy. Taillefer and the song rest on the same evidence that Duke William and Harold and the battle itself rest upon, and to doubt the 'Chanson' is to call the very roll of Battle Abbey in question. The whole fabric of society totters; the British peerage turns pale.

Wace did not invent all his facts. William of Malmesbury is supposed to have written his prose chronicle about 1120 when many of the men who fought at Hastings must have been alive, and William expressly said: 'Tunc cantilena Rollandi inchoata ut martium viri exemplum pugnaturos accenderet, inclamatoque dei auxilio, praelium consertum.' Starting the 'Chanson de Roland' to inflame the fighting temper of the men, battle was joined. This seems enough proof to satisfy any sceptic, yet critics still suggest that the 'cantilena Rollandi' must have been a Norman 'Chanson de Rou,' or 'Rollo,' or at best an earlier version of the 'Chanson de Roland'; but no Norman chanson would have inflamed the martial spirit of William's army, which was largely French; and as for the age of the version, it is quite immaterial for Mont-Saint-Michel; the actual version is old enough.

Taillefer himself is more vital to the interest of the dinner in the refectory, and his name was not mentioned by William of Malmesbury. If the song was started by the Duke's order, it was certainly started by the Duke's jongleur, and the name of this jongleur happens to be known on still better authority than that of William of Malmesbury. Guy of Amiens went to England in 1068 as almoner of Queen Matilda, and there wrote a Latin poem on the battle of Hastings which must have been complete within ten years after the battle was fought, for Guy died in 1076. Taillefer, he said, led the Duke's battle:

Incisor-ferri mimus cognomine dictus.

aillefer, a jongleur known by that name.' A mime was singer, but Taillefer was also an actor:

Histrio cor audax nimium quem nobilitabat.

jongleur whom a very brave heart ennobled.' The jongleur as not noble by birth, but was ennobled by his bravery.

Hortatur Gallos verbis et territat Anglos
Alte projiciens ludit et ense suo.

ke a drum-major with his staff, he threw his sword high in the and caught it, while he chanted his song to the French, and rified the English. The rhymed chronicle of Geoffroy Gaimer no wrote about 1150, and that of Benoist who was Wace's al, added the story that Taillefer died in the mêlée.

The most unlikely part of the tale was, after all, not the ging of the 'Chanson,' but the prayer of Taillefer to the uke:

'Otreiez mei que io ni faille
Le premier colp de la bataille.'

gally translated, Taillefer asked to be ennobled, and offered pay for it with his life. The request of a jongleur to lead the uke's battle seems incredible. In early French 'bataille' meant ttalion — the column of attack. The Duke's grant: 'Io trei!' seems still more fanciful. Yet Guy of Amiens distinctly nfirmed the story: 'Histrio cor audax nimium quem nobilita-t'; a stage-player — a juggler — the Duke's singer — whose avery ennobled him. The Duke granted him — *octroya* — his tent of nobility on the field.

All this preamble leads only to unite the 'Chanson' with the chitecture of the Mount, by means of Duke William and his eton campaign of 1058. The poem and the church are akin; ey go together, and explain each other. Their common trait their military character, peculiar to the eleventh century. ie round arch is masculine. The 'Chanson' is so masculine it, in all its four thousand lines, the only Christian woman so ich as mentioned was Alda, the sister of Oliver and the trothed of Roland, to whom one stanza, exceedingly like ater insertion, was given, toward the end. Never after the

first crusade did any great poem rise to such heroism as to sustain itself without a heroine. Even Dante attempted no such feat.

Duke William's party, then, is to be considered as assembled at supper in the old refectory, in the year 1058, while the triumphal piers of the church above are rising. The Abbot, Ralph of Beaumont, is host; Duke William sits with him on a daïs; Harold is by his side 'a grant enor'; the Duke's brother, Odo, Bishop of Bayeux, with the other chief vassals, are present; and the Duke's jongleur Taillefer is at his elbow. The room is crowded with soldiers and monks, but all are equally anxious to hear Taillefer sing. As soon as dinner is over, at a nod from the Duke, Taillefer begins:

Carles li reis nostre emperere magnes	Charles the king, our emperor, the great,
Set anz tuz pleins ad estet en Espaigne	Seven years complete has been in Spain,
Cunquist la tere tresque en la mer altaigne	Conquered the land as far as the high seas,
Ni ad castel ki devant lui remaigne	Nor is there castle that holds against him,
Murs ne citez ni est remes a fraindre.	Nor wall or city left to capture.

The 'Chanson' opened with these lines, which had such a direct and personal bearing on every one who heard them as to sound like prophecy. Within ten years William was to stand in England where Charlemagne stood in Spain. His mind was full of it, and of the means to attain it; and Harold was even more absorbed than he by the anxiety of the position. Harold had been obliged to take oath that he would support William's claim to the English throne, but he was still undecided, and William knew men too well to feel much confidence in an oath. As Taillefer sang on, he reached the part of Ganelon, the typical traitor, the invariable figure of mediaeval society. No feudal lord was without a Ganelon. Duke William saw them all about him. He might have felt that Harold would play the part, but if Harold should choose rather to be Roland, Duke William could have foretold that his own brother, Bishop Odo, after gorging himself on the plunder of half England, would turn into a Ganelon so dangerous as to require a prison for life.

When Taillefer reached the battle-scenes, there was no further need of imagination to realize them. They were scenes of yesterday and tomorrow. For that matter, Charlemagne or his successor was still at Aix, and the Moors were still in Spain. Archbishop Turpin of Rheims had fought with sword and mace in Spain, while Bishop Odo of Bayeux was to marshal his men at Hastings, like a modern general, with a staff, but both were equally at home on the field of battle. Verse by verse, the song was a literal mirror of the Mount. The battle of Hastings was to be fought on the Archangel's Day. What happened to Roland at Roncesvalles was to happen to Harold at Hastings, and Harold, as he was dying like Roland, was to see his brother Gyrth die like Oliver. Even Taillefer was to be a part, and a distinguished part, of his chanson. Sooner or later, all were to die in the large and simple way of the eleventh century. Duke William himself, twenty years later, was to meet a violent death at Mantes in the same spirit, and if Bishop Odo did not die in battle, he died, at least, like an eleventh-century hero, on the first crusade. First or last, the whole company died in fight, or in prison, or on crusade, while the monks shrived them and prayed.

Then Taillefer certainly sang the great death-scenes. Even this day every French school-boy, if he knows no other poetry, knows these verses by heart. In the eleventh century they wrung the heart of every man-at-arms in Europe, whose school was the field of battle and the hand-to-hand fight. No modern singer ever enjoys such power over an audience as Taillefer exercised over these men who were actors as well as listeners. In the mêlée at Roncesvalles, overborne by innumerable Saracens, Oliver at last calls for help:

Munjoie escriet e haltement e cler.	'Montjoie!' he cries, loud and clear.
Rollant apelet sun ami e sun per;	Roland he calls, his friend and peer:
Sire compainz a mei kar vus justez.	'Sir Friend! ride now to help me here!
Si grant dulur ermes hoi deserveret.'	Parted today, great pity were.'
Aoi.	

Of course the full value of the verse cannot be regained. One knows neither how it was sung nor even how it was pronounced.

The assonances are beyond recovering; the 'laisse' or leash of verses or assonances with the concluding cry, 'Aoi,' has long ago vanished from verse or song. The sense is as simple as the 'Ballad of Chevy Chase,' but one must imagine the voice and acting. Doubtless Taillefer acted each motive; when Oliver called loud and clear, Taillefer's voice rose; when Roland spoke 'doulcement et suef,' the singer must have sung gently and soft; and when the two friends, with the singular courtesy of knighthood and dignity of soldiers, bowed to each other in parting and turned to face their deaths, Taillefer may have indicated the movement as he sang. The verses gave room for great acting. Hearing Oliver's cry for help, Roland rode up, and at sight of the desperate field, lost for a moment his consciousness:

As vus Rollant sur sun cheval pasmet
E Olivier ki est a mort nafrez!
Tant ad sainiet li oil li sunt trublet
Ne luinz ne pres ne poet veeir si cler
Que reconuisset nisun hume mortel.
Sun cumpaignun cum il l'ad encuntret
Sil fiert amunt sur l'elme a or gemmet
Tut li detrenchet d'ici que al nasel
Mais en la teste ne l'ad mie adeset.
A icel colp l'ad Rollanz reguardet
Si li demandet dulcement et suef
'Sire cumpainz, faites le vus de gred?
Ja est ço Rollanz ki tant vus soelt amer.
Par nule guise ne m'aviez desfiet,'
Dist Oliviers: 'Or vus oi jo parler
Io ne vus vei. Veied vus damnedeus!
Ferut vus ai. Kar le me pardunez!'
Rollanz respunt: 'Jo n'ai nient de mel.
Jol vus parduins ici e devant deu.'
A icel mot l'uns al altre ad clinet.
Par tel amur as les vus desevrez!

There Roland sits unconscious on his horse,
And Oliver who wounded is to death,
So much has bled, his eyes grow dark to him,
Nor far nor near can see so clear
As to recognize any mortal man.
His friend, when he has encountered him,
He strikes upon the helmet of gemmed gold,
Splits it from the crown to the nose-piece,
But to the head he has not reached at all.
At this blow Roland looks at him,
Asks him gently and softly:
'Sir Friend, do you it in earnest?
You know 't is Roland who has so loved you.
In no way have you sent to me defiance.'
Says Oliver: 'Indeed I hear you speak,
I do not see you. May God see and save you!
Strike you I did. I pray you pardon me.'
Roland replies: 'I have no harm at all.
I pardon you here and before God!'
At this word, one to the other bends himself.
With such affection, there they separate.

No one should try to render this into English — or, indeed, to modern French — verse, but any one who will take the ɔuble to catch the metre and will remember that each verse the 'leash' ends in the same sound — *aimer*, *parler*, *cler*, *ɔrtel*, *damnedé*, *mel*, *deu*, *suef*, *nasel* — however the terminal llables may be spelled, can follow the feeling of the poetry as ell as though it were Greek hexameter. He will feel the simple rce of the words and action, as he feels Homer. It is the grand yle — the eleventh century:

Ferut vus ai! Kar le me pardunez!

ot a syllable is lost, and always the strongest syllable is chosen. ven the sentiment is monosyllabic and curt:

Ja est ço Rollanz ki tant vus soelt amer!

aillefer had, in such a libretto, the means of producing ramatic effects that the French comedy or the grand opera ver approached, and such as made Bayreuth seem thin and eble. Duke William's barons must have clung to his voice and tion as though they were in the very mêlée, striking at the lmets of gemmed gold. They had all been there, and were to e there again. As the climax approached, they saw the scene elf; probably they had seen it every year, more or less, since ey could swing a sword. Taillefer chanted the death of Oliver nd of Archbishop Turpin and all the other barons of the rear uard, except Roland, who was left for dead by the Saracens hen they fled on hearing the horns of Charlemagne's return- g host. Roland came back to consciousness on feeling a aracen marauder tugging at his sword Durendal. With a blow his ivory horn — *oliphant* — he killed the pagan; then feeling eath near, he prepared for it. His first thought was for urendal, his sword, which he could not leave to infidels. In e singular triple repetition which gives more of the same lidity and architectural weight to the verse, he made three tempts to break the sword, with a lament — a *plaint* — for ch. Three times he struck with all his force against the rock;

each time the sword rebounded without breaking. The third time —

Rollanz ferit en une pierre bise
Plus en abat que jo ne vus sai dire.
L'espee cruist ne fruisset ne ne briset

Cuntre le ciel amunt est resortie.
Quant veit li quens que ne la fraindrat mie
Mult dulcement la plainst a sei meisme.
'E! Durendal cum ies bele e saintisme!

En l'oret punt asez i ad reliques.
La dent saint Pierre e del sanc seint Basilie
E des chevels mun seignur seint Denisie
Del vestment i ad seinte Marie.
Il nen est dreiz que paien te baillisent.

De chrestiens devez estre servie.
Ne vus ait hum ki vacet cuardie!

Mult larges terres de vus averai cunquises
Que Carles tient ki la barbe ad flurie.

E li emperere en est e ber e riches.'

Roland strikes on a grey stone,
More of it cuts off than I can tell you.
The sword grinds, but shatters not nor breaks,
Upward against the sky it rebounds.
When the Count sees that he can never break it,
Very gently he mourns it to himself:
'Ah, Durendal, how fair you are and sacred!
In your golden guard are many relics,
The tooth of Saint Peter and blood of Saint Basil,
And hair of my seigneur Saint-Denis,
Of the garment too of Saint Mary.
It is not right that pagans should own you.
By Christians you should be served,
Nor should man have you who does cowardice.
Many wide lands by you I have conquered
That Charles holds, who has the white beard,
And emperor of them is noble and rich.'

This 'laisse' is even more eleventh-century than the other, but it appealed no longer to the warriors; it spoke rather to the monks. To the warriors, the sword itself was the religion, and the relics were details of ornament or strength. To the priest, the list of relics was more eloquent than the Regent diamond on the hilt and the Kohinoor on the scabbard. Even to us it is interesting if it is understood. Roland had gone on pilgrimage to the Holy Land. He had stopped at Rome and won the friendship of Saint Peter, as the tooth proved; he had passed through Constantinople and secured the help of Saint Basil; he had reached Jerusalem and gained the affection of the Virgin; he had come home to France and secured the support of his 'Seigneur' Saint Denis; for Roland, like Hugh Capet, was a liege-man of Saint Denis and French to the heart. France, to

m, was Saint Denis, and at most the Île de France, but not njou or even Maine. These were countries he had conquered ith Durendal:

Jo l'en cunquis e Anjou e Bretaigne
Si l'en cunquis e Peitou e le Maine
Jo l'en cunquis Normendie la franche
Si l'en cunquis Provence e Equitaigne.

e had conquered these for his emperor Charlemagne with the lp of his immediate spiritual lord or seigneur Saint Denis, but e monks knew that he could never have done these feats with- ut the help of Saint Peter, Saint Basil, and Saint Mary the essed Virgin, whose relics, in the hilt of his sword, were worth ore than any king's ransom. To this day a tunic of the Virgin the most precious property of the cathedral at Chartres. ther one of Roland's relics would have made the glory of any rine in Europe, and every monk knew their enormous value d power better than he knew the value of Roland's conquests. Yet even the religion is martial, as though it were meant for e fighting Archangel and Odo of Bayeux. The relics serve e sword; the sword is not in service of the relics. As the death- ene approaches, the song becomes even more military:

sent Rollanz que la mort le tresprent	Then Roland feels that death is taking him;
vers la teste sur le quer li descent.	Down from the head upon the heart it falls.
suz un pin i est alez curanz	Beneath a pine he hastens running;
r l'erbe verte si est culchiez adenz	On the green grass he throws himself down;
suz lui met s'espee e l'olifant	Beneath him puts his sword and oliphant,
rnat sa teste vers la paiene gent.	Turns his face toward the pagan army.
r ço l'ad fait que il voelt veirement	For this he does it, that he wishes greatly
ue Carles diet et trestute sa gent	That Charles should say and all his men,
gentils quens quil fut morz cunqueranz.	The gentle Count has died a conqueror.

Thus far, not a thought or a word strays from the field of war. ith a childlike intensity, every syllable bends toward the ngle idea —

Li gentils quens quil fut morz cunqueranz.

Only then the singer allowed the Church to assert some of its rights:

Ço sent Rollanz de sun tens ni ad plus
Devers Espaigne gist en un pui agut
A l'une main si ad sun piz batut.
'Deus meie culpe vers les tues vertuz
De mes pecchiez des granz e des menuz
Que jo ai fait des l'ure que nez fui
Tresqu'a cest jur que ci sui consouz.'
Sun destre guant en ad vers deu tendut
Angle del ciel i descendent a lui. Aoi.
Li quens Rollanz se jut desuz un pin
Envers Espaigne en ad turnet sun vis
De plusurs choses a remembrer li prist
De tantes terres cume li bers cunquist
De dulce France des humes de sun lign
De Carlemagne sun seignur kil nurrit
Ne poet muer men plurt e ne suspirt
Mais lui meisme ne voelt metre en ubli
Claimet sa culpe si priet deu mercit.
'Veire paterne ki unkes ne mentis
Seint Lazarun de mort resurrexis
E Daniel des liuns guaresis
Guaris de mei l'anme de tuz perils
Pur les pecchiez que en ma vie fis.'
Sun destre guant a deu en puroffrit
E de sa main seinz Gabriel lad pris
Desur sun braz teneit le chief enclin

Then Roland feels that his last hour has come
Facing toward Spain he lies on a steep hill,
While with one hand he beats upon his breast:
'Mea culpa, God! through force of thy miracles
Pardon my sins, the great as well as small,
That I have done from the hour I was born
Down to this day that I have now attained.'
His right glove toward God he lifted up.
Angels from heaven descend on him. Aoi.
Count Roland throws himself beneath a pine
And toward Spain has turned his face away.
Of many things he called the memory back,
Of many lands that he, the brave, had conquered,
Of gentle France, the men of his lineage,
Of Charlemagne his lord, who nurtured him;
He cannot help but weep and sigh for these,
But for himself will not forget to care;
He cries his Culpe, he prays to God for grace.
O God the Father who has never lied,
Who raised up Saint Lazarus from death,
And Daniel from the lions saved,
Save my soul from all the perils
For the sins that in my life I did!'
His right-hand glove to God he proffered;
Saint Gabriel from his hand took it;
Upon his arm he held his head inclined,

ıtes ses mains est alez a sa fin.	Folding his hands he passed to his end.
ıs li tramist sun angle cherubin	God sent to him his angel cherubim
eint Michiel de la mer del peril	And Saint Michael of the Sea in Peril,
emble od els Seinz Gabriels i vint	Together with them came Saint Gabriel.
nme del cunte portent en pareis.	The soul of the Count they bear to Paradise.

Our age has lost much of its ear for poetry, as it has its eye colour and line, and its taste for war and worship, wine and men. Not one man in a hundred thousand could now feel at the eleventh century felt in these verses of the 'Chanson,' d there is no reason for trying to do so, but there is a certain in trying for once to understand not so much the feeling as meaning. The naïveté of the poetry is that of the society. d the Father was the feudal seigneur, who raised Lazarus— baron or vassal — from the grave, and freed Daniel, as an dence of his power and loyalty; a seigneur who never lied, or s false to his word. God the Father, as feudal seigneur, sorbs the Trinity, and, what is more significant, absorbs or cludes also the Virgin, who is not mentioned in the prayer. this seigneur, Roland in dying, proffered (puroffrit) his ht-hand gauntlet. Death was an act of homage. God sent wn his Archangel Gabriel as his representative to accept the mage and receive the glove. To Duke William and his barons thing could seem more natural and correct. God was not ther away than Charlemagne.

Correct as the law may have been, the religion even at that ıe must have seemed to the monks to need professional vice. Roland's life was not exemplary. The 'Chanson' had en pains to show that the disaster at Roncesvalles was due Roland's headstrong folly and temper. In dying, Roland d not once thought of these faults, or repented of his worldly bitions, or mentioned the name of Alda, his betrothed. He d clung to the memory of his wars and conquests, his lineage, earthly seigneur Charlemagne, and of 'douce France.' He d forgotten to give so much as an allusion to Christ. The poet arded all these matters as the affair of the Church; all the rrior cared for was courage, loyalty, and prowess.

The interest of these details lies not in the scholarship or th historical truth or even the local colour, so much as in the ar The naïveté of the thought is repeated by the simplicity of th verse. Word and thought are equally monosyllabic. Nothin ever matched it. The words bubble like a stream in the woods

Ço sent Rollanz de sun tens ni ad plus.

Try and put them into modern French, and see what wil happen:

Que jo ai fait des l'ure que nez fui.

The words may remain exactly the same, but the poetry wil have gone out of them. Five hundred years later, even th English critics had so far lost their sense for military poetry tha they professed to be shocked by Milton's monosyllables:

Whereat he inly raged, and, as they talked,
Smote him into the midriff with a stone
That beat out life.

Milton's language was indeed more or less archaic and Biblical it was a Puritan affectation; but the 'Chanson' in the refector actually reflected, repeated, echoed, the piers and arches of th Abbey Church just rising above. The verse is built up. Th qualities of the architecture reproduce themselves in the song the same directness, simplicity, absence of self-consciousness the same intensity of purpose; even the same material; th prayer is granite:

Guaris de mei l'anme de tuz perils
Pur les pecchiez que en ma vie fis!

The action of dying is felt, like the dropping of a keystone int the vault, and if the Romanesque arches in the church, whic are within hearing, could speak, they would describe what the are doing in the precise words of the poem:

Desur sun braz teneit le chief enclin	Upon their shoulders have their head inclined,
Juintes ses mains est alez a sa fin.	Folded their hands, and sunken to thei rest.

Many thousands of times these verses must have been sun at the Mount and echoed in every castle and on every battle

d from the Welsh Marches to the shores of the Dead Sea. modern opera or play ever approached the popularity of 'Chanson.' None has ever expressed with anything like the ıe completeness the society that produced it. Chanted by ry minstrel — known by heart, from beginning to end, by ry man and woman and child, lay or clerical — translated) every tongue — more intensely felt, if possible, in Italy l Spain than in Normandy and England — perhaps most :ctive, as a work of art, when sung by the Templars in their at castles in the Holy Land — it is now best felt at Mont-nt-Michel, and from the first must have been there at home. e proof is the line, evidently inserted for the sake of its local ·ct, which invoked Saint Michael in Peril of the Sea at the aax of Roland's death, and one needs no original documents ·ontemporary authorities to prove that, when Taillefer came his invocation, not only Duke William and his barons, but more Abbot Ranulf and his monks, broke into a frenzy of ıpathy which expressed the masculine and military passions he Archangel better than it accorded with the rules of Saint edict.

III. The Merveille

THE nineteenth century moved fast and furious, so that one who moved in it felt sometimes giddy, watching it spin; but the eleventh moved faster and more furiously still. The Norman conquest of England was an immense effort, and its consequences were far-reaching, but the first crusade was altogether the most interesting event in European history. Never has the Western world shown anything like the energy and unity with which she then flung herself on the East, and for the moment made the East recoil. Barring her family quarrels, Europe was a unity then, in thought, will, and object. Christianity was the unit. Mont-Saint-Michel and Byzantium were near each other. The Emperor Constantine and the Emperor Charlemagne were figured as allies and friends in the popular legend. The East was the common enemy, always superior in wealth and numbers, frequently in energy, and sometimes in thought and art. The outburst of the first crusade was splendid even in a military sense, but it was great beyond comparison in its reflection in architecture, ornament, poetry, colour, religion, and philosophy. Its men were astonishing, and its women were worth all the rest.

Mont-Saint-Michel, better than any other spot in the world, keeps the architectural record of that ferment, much as the Sicilian temples keep the record of the similar outburst of Greek energy, art, poetry, and thought, fifteen hundred years before. Of the eleventh century, it is true, nothing but the church

hotograph by Clarence B. Mitchell

MONT-SAINT-MICHEL

nains at the Mount, and, if studied further, the century has
to be sought elsewhere, which is not difficult, since it is
served in any number of churches in every path of tourist
vel. Normandy is full of it; Bayeux and Caen contain little
e. At the Mount, the eleventh-century work was antiquated
ore it was finished. In the year 1112, Abbot Roger II was
iged to plan and construct a new group in such haste that
s said to have been finished in 1122. It extends from what
have supposed to be the old refectory to the parvis, and
its on the three lost spans of the church, covering about one
ndred and twenty feet. As usual there were three levels;
rypt or gallery beneath, known as the Aquilon; a cloister or
menoir above; and on the level of the church a dormitory,
w lost. The group is one of the most interesting in France,
ther *pons seclorum*, an antechamber to the west portal of
artres, which bears the same date (1110–25). It is the famous
iod of Transition, the glory of the twelfth century, the object
our pilgrimage.

Art is a fairly large field where no one need jostle his neigh-
ur, and no one need shut himself up in a corner; but, if one
ists on taking a corner of preference, one might offer some
use for choosing the Gothic Transition. The quiet, re-
ined strength of the Romanesque married to the graceful
ves and vaulting imagination of the Gothic makes a union
rer the ideal than is often allowed in marriage. The French,
their best days, loved it with a constancy that has thrown
ort of aureole over their fickleness since. They never tired of
possibilities. Sometimes they put the pointed arch within
round, or above it; sometimes they put the round within
pointed. Sometimes a Roman arch covered a cluster of
nted windows, as though protecting and caressing its chil-
n; sometimes a huge pointed arch covered a great rose-
ndow spreading across the whole front of an enormous
hedral, with an arcade of Romanesque windows beneath.
e French architects felt no discord, and there was none.
en the pure Gothic was put side by side with the pure Roman.
u will see no later Gothic than the choir of the Abbey Church

above (1450–1521), unless it is the north flèche of Chartres Cathedral (1507–13); and if you will look down the nave through the triumphal arches, into the pointed choir four hundred years more modern, you can judge whether there is any real discord. For those who feel the art, there is none; the strength and the grace join hands; the man and woman love each other still.

The difference of sex is not imaginary. In 1058, when the triumphal columns were building, and Taillefer sang to William the Bastard and Harold the Saxon, Roland still prayed his 'mea culpa' to God the Father and gave not a thought to Alda his betrothed. In the twelfth century Saint Bernard recited 'Ave Stella Maris' in an ecstasy of miracle before the image of the Virgin, and the armies of France in battle cried, 'Notre-Dame-Saint-Denis-Montjoie.' What the Roman could not express flowered into the Gothic; what the masculine mind could not idealize in the warrior, it idealized in the woman; no architecture that ever grew on earth, except the Gothic, gave this effect of flinging its passion against the sky.

When men no longer felt the passion, they fell back on themselves, or lower. The architect returned to the round arch, and even further to the flatness of the Greek colonnade; but this was not the fault of the twelfth or thirteenth centuries. What they had to say they said; what they felt they expressed; and if the seventeenth century forgot it, the twentieth in turn has forgotten the seventeenth. History is only a catalogue of the forgotten. The eleventh century is no worse off than its neighbours. The twelfth is, in architecture, rather better off than the nineteenth. These two rooms, the Aquilon and promenoir which mark the beginning of the Transition, are, on the whole, more modern than Saint-Sulpice, or Il Gesu at Rome. In the same situation, for the same purposes, any architect would be proud to repeat them today.

The Aquilon, though a hall or gallery of importance in its day, seems to be classed among crypts. M. Camille Enlart, in his 'Manual of French Archaeology' (p. 252) gives a list of Romanesque and Transition crypts, about one hundred and

enty, to serve as examples for the study. The Aquilon is not e of them, but the crypt of Saint-Denis and that of Chartres thedral would serve to teach any over-curious tourist all it he should want to know about such matters. Photographs h as those of the Monuments Historiques answer all the just rposes of underground travel. The Aquilon is one's first son in Transition architecture because it is dated (1112); and e crypt of Saint-Denis serves almost equally well because the bé Suger must have begun his plans for it about 1122. Both ve the same *arcs doubleaux* and *arcs-formerets*, though in opsite arrangement. Both show the first heavy hint at the broken h. There are no nervures — no rib-vaulting — and hardly uggestion of the Gothic as one sees it in the splendid crypt the Gros Piliers close at hand, except the elaborately interting vaults and the heavy columns; but the promenoir above an astonishing leap in time and art. The promenoir has the ne arrangement and columns as the Aquilon, but the vaults e beautifully arched and pointed, with ribs rising directly m the square capitals and intersecting the central spacings, a spirit which neither you nor I know how to distinguish m the pure Gothic of the thirteenth century, unless it is that e arches are hardly pointed enough; they seem to the eye nost round. The height appears to be about fourteen feet.

The promenoir of Abbot Roger II has an interest to pilgrims o are going on to the shrine of the Virgin, because the date of e promenoir seems to be exactly the same as the date which e Abbé Bulteau assigns for the western portal of Chartres. dinarily a date is no great matter, but when one has to run ward and back, with the agility of an electric tram, between o or three fixed points, it is convenient to fix them once for all. e Transition is complete here in the promenoir, which was nned as early as 1115. The subject of vaulting is far too bitious for summer travel; it is none too easy for a graduate the Beaux Arts; and few architectural fields have been so nestly discussed and disputed. We must not touch it. The e of the 'Chanson de Roland' itself is not so dangerous a topic. r vital needs are met, more or less sufficiently, by taking the

promenoir at the Mount, the crypt at Saint-Denis, and the western portal at Chartres, as the trinity of our Transition, and roughly calling their date the years 1115–20. To overload the memory with dates is the vice of every schoolmaster and the passion of every second-rate scholar. Tourists want as few dates as possible; what they want is poetry. Yet a singular coincidence, with which every classroom is only too familiar, has made of the years –'15 a curiously convenient group, and the year 1115 is as convenient as any for the beginning of the century of Transition. That was the year when Saint Bernard laid the foundations of his Abbey of Clairvaux. Perhaps 1115, or at latest 1117, was the year when Abélard sang love-songs to Héloise in Canon Fulbert's house in the Rue des Chantres, beside the cloister of Notre Dame in Paris. The Abbé Suger, the Abbé Bernard, and the Abbé Abélard are the three interesting men of the French Transition.

The promenoir, then, shall pass for the year 1115, and, as such, is an exceedingly beautiful hall, uniting the splendid calm and seriousness of the Romanesque with the exquisite lines of the Gothic. You will hardly see its equal in the twelfth century. At Angers the great hall of the Bishop's Palace survives to give a point of comparison, but commonly the halls of that date were not vaulted; they had timber roofs, and have perished. The promenoir is about sixty feet long, and divided into two aisles, ten feet wide, by a row of columns. If it were used on great occasions as a refectory, eighty or a hundred persons could have been seated at table, and perhaps this may have been about the scale of the Abbey's needs, at that time. Whatever effort of fancy was needed to place Duke William and Harold in the old refectory of 1058, none whatever is required in order to see his successors in the halls of Roger II. With one exception they were not interesting persons. The exception was Henry II of England and Anjou, and his wife Eleanor of Guienne, who was for a while Regent of Normandy. One of their children was born at Domfront, just beyond Avranches, and the Abbot was asked to be godfather. In 1158, just one hundred years after Duke William's visit, King Henry and his whole suite came to

e Abbey, heard mass, and dined in the refectory. 'Rex venit
. Montem Sancti Michaelis, audita missa ad magis altare,
medit in Refectorio cum baronibus suis.' Abbot Robert of
origny was his host, and very possibly William of Saint-Pair
oked on. Perhaps he recited parts of his 'Roman' before the
ing. One may be quite sure that when Queen Eleanor came
the Mount she asked the poet to recite his verses, for Eleanor
ve law to poets.

One might linger over Abbot Robert of Torigny, who was
very great man in his day, and an especially great architect,
t too ambitious. All his work, including the two towers,
umbled and fell for want of proper support. What would cor-
spond to the cathedrals of Noyon and Soissons and the old
ocher and flèche of Chartres is lost. We have no choice but to
p down into the next century at once, and into the full and
rfect Gothic of the great age when the new Chartres was
ilding.

In the year 1203, Philip Augustus expelled the English from
ormandy and conquered the province; but, in the course of
e war the Duke of Brittany, who was naturally a party to any
ar that took place under his eyes, happened to burn the town
neath the Abbey, and in doing so, set fire unintentionally
the Abbey itself. The sacrilege shocked Philip Augustus, and
e wish to conciliate so powerful a vassal as Saint Michel, or his
bot, led the King of France to give a large sum of money for
pairing the buildings. The Abbot Jordan (1191–1212) at
ce undertook to outdo all his predecessors, and, with an
mense ambition, planned the huge pile which covers the
ole north face of the Mount, and which has always borne the
pressive name of the Merveille.

The general motive of abbatial building was common to them
. Abbeys were large households. The church was the centre,
d at Mont-Saint-Michel the summit, for the situation com-
lled the abbots there to pile one building on another instead
arranging them on a level in squares or parallelograms. The
rmitory in any case had to be near a door of the church, be-
use the Rule required constant services, day and night. The

cloister was also hard-by the church door, and, at the Mount, had to be on the same level in order to be in open air. Naturally the refectory must be immediately beneath one or the other of these two principal structures, and the hall, or place of meeting for business with the outside world, or for internal administration, or for guests of importance, must be next the refectory. The kitchen and offices would be placed on the lowest stage, if for no other reason, because the magazines were two hundred feet below at the landing-place, and all supplies, including water, had to be hauled up an inclined plane by windlass. To administer such a society required the most efficient management. An abbot on this scale was a very great man, indeed, who enjoyed an establishment of his own, close by, with officers in no small number; for the monks alone numbered sixty, and even these were not enough for the regular church services at seasons of pilgrimage. The Abbot was obliged to entertain scores and hundreds of guests, and these, too, of the highest importance, with large suites. Every ounce of food must be brought from the mainland, or fished from the sea. All the tenants and their farms, their rents and contributions, must be looked after. No secular prince had a more serious task of administration, and none did it so well. Tenants always preferred an abbot or bishop for landlord. The Abbey was the highest administrative creation of the Middle Ages, and when one has made one's pilgrimage to Chartres, one might well devote another summer to visiting what is left of Clairvaux, Citeaux, Cluny, and the other famous monasteries, with Viollet-le-Duc to guide, in order to satisfy one's mind whether, on the whole, such a life may not have had activity as well as idleness.

This is a matter of economies, to be settled with the keepers of more modern hotels, but the art had to suit the conditions, and when Abbot Jordan decided to plaster this huge structure against the side of the Mount, the architect had a relatively simple task to handle. The engineering difficulties alone were very serious. The architectural plan was plain enough. As the Abbot laid his requirements before the architect, he seems to have begun by fixing the scale for a refectory capable of

ating two hundred guests at table. Probably no king in urope fed more persons at his table than this. According to . Corroyer's plan, the length of the new refectory is one ndred and twenty-three feet (37.5 metres). A row of columns wn the centre divides it into two aisles, measuring twelve feet ear, from column to column, across the room. If tables were t the whole length of the two aisles, forty persons could have en easily seated, in four rows, or one hundred and sixty rsons. Without crowding, the same space would give room r fifty guests, or two hundred in all.

Once the scale was fixed, the arrangement was easy. Begin- ng at the lowest possible level, one plain, very solidly built, ulted room served as foundation for another, loftier and more licately vaulted; and this again bore another which stood on e level of the church, and opened directly into the north nsept. This arrangement was then doubled; and the second t of rooms, at the west end, contained the cellar on the lower el, another great room or hall above it, and the cloister at e church door, also entering into the north transept. Door- ys, passages, and stairs unite them all. The two heavy halls the lowest level are now called the almonry and the cellar, hich is a distinction between administrative arrangements at does not concern us. Architecturally the rooms might, to r untrained eyes, be of the same age with the Aquilon. They e earliest Transition, as far as a tourist can see, or at least they long to the class of crypts which has an architecture of its n. The rooms that concern us are those immediately above: e so-called Salle des Chevaliers at the west end; and the so- lled refectory at the east. Every writer gives these rooms fferent names, and assigns them different purposes, but what- er they were meant for, they are, as halls, the finest in France; e purest in thirteenth-century perfection.

The Salle des Chevaliers of the Order of Saint Michael eated by Louis XI in 1469 was, or shall be for tourist purposes, e great hall that every place and castle contained, and in hich the life of the château centred. Planned at about the me time with the Cathedral of Chartres (1195–1210), and

before the Abbey Church of Saint-Denis, this hall and its neighbour the refectory, studied together with the cathedral and the abbey, are an exceedingly liberal education for anybody, tourist or engineer or architect, and would make the fortune of an intelligent historian, if such should happen to exist; but the last thing we ask from them is education or instruction. We want only their poetry, and shall have to look for it elsewhere. Here is only the shell — the dead art — and silence. The hall is about ninety feet long, and sixty feet in its greatest width. It has three ranges of columns making four vaulted aisles which seem to rise about twenty-two feet in height. It is warmed by two huge and heavy *cheminées* or fireplaces in the outside wall, between the windows. It is lighted beautifully, but mostly from above through round windows in the arching of the vaults. The vaulting is a study for wiser men than we can ever be. More than twenty strong round columns, free or engaged, with Romanesque capitals, support heavy ribs, or nervures, and while the two central aisles are eighteen feet wide, the outside aisle, into which the windows open, measures only ten feet in width, and has consequently one of the most sharply pointed vaults we shall ever meet. The whole design is as beautiful a bit of early Gothic as exists, but what would take most time to study, if time were to spare, would be the instinct of the Archangel's presence which has animated his architecture. The masculine, military energy of Saint Michael lives still in every stone. The genius that realized this warlike emotion has stamped his power everywhere, on every centimetre of his work; in every ray of light; on the mass of every shadow; wherever the eye falls; still more strongly on all that the eye divines, and in the shadows that are felt like the lights. The architect intended it all. Any one who doubts has only to step through the doorway in the corner into the refectory. There the architect has undertaken to express the thirteenth-century idea of the Archangel; he has left the twelfth century behind him.

The refectory, which has already served for a measure of the Abbot's scale, is, in feeling, as different as possible from the

all. Six charming columns run down the centre, dividing the oom into two vaulted aisles, apparently about twenty-seven et in height. Wherever the hall was heavy and serious, the fectory was made light and graceful. Hardly a trace of the omanesque remains. Only the slight, round columns are ot yet grooved or fluted, and their round capitals are still ghtly severe. Every detail is lightened. The great fireplaces re removed to one end of the room. The most interesting ange is in the windows. When you reach Chartres, the great ook of architecture will open on the word 'Fenestration' — *nêtre* — a word as ugly as the thing was beautiful; and then, ith pain and sorrow, you will have to toil till you see how the chitects of 1200 subordinated every other problem to that of ghting their spaces. Without feeling their lights, you can never el their shadows. These two halls at Mont-Saint-Michel are ntechambers to the nave of Chartres; their fenestration, inside d out, controls the whole design. The lighting of the refectory superb, but one feels its value in art only when it is taken in lation to the lighting of the hall, and both serve as a simple reamble to the romance of the Chartres windows.

The refectory shows what the architect did when, to lighten s effects, he wanted to use every possible square centimetre of ght. He has made nine windows; six on the north, two on the st, and one on the south. They are nearly five feet wide, and out twenty feet high. They flood the room. Probably they ere intended for glass, and M. Corroyer's volume contains ood-cuts of a few fragments of thirteenth-century glass dis-vered in his various excavations; but one may take for granted at with so much light, colour was the object intended. The ors would be tiled in colour; the walls would be hung with lour; probably the vaults were painted in colour; one can see all in scores of illuminated manuscripts. The thirteenth ntury had a passion for colour, and made a colour-world of own which we have got to explore.

The two halls remain almost the only monuments of what ust be called secular architecture of the early and perfect riod of Gothic art (1200–10). Churches enough remain, with

Chartres at their head, but all the great abbeys, palaces and châteaux of that day are ruins. Arques, Gaillard, Montargis, Coucy, the old Louvre, Chinon, Angers, as well as Cluny, Clairvaux, Citeaux, Jumièges, Vezelay, Saint-Denis, Poissy, Fontevrault, and a score of other residences, royal or semiroyal, have disappeared wholly, or have lost their residential buildings. When Viollet-le-Duc, under the Second Empire, was allowed to restore one great château, he chose the latest, Pierrefonds, built by Louis d'Orléans in 1390. Vestiges of Saint Louis's palace remain at the Conciergerie, but the first great royal residence to be compared with the Merveille is Amboise, dating from about 1500, three centuries later. Civilization made almost a clean sweep of art. Only here, at Mont-Saint-Michel, one may still sit at ease on the stone benches in the embrasures of the refectory windows, looking over the thirteenth-century ocean and watching the architect as he worked out the details which were to produce or accent his contrasts or harmonies, heighten his effects, or hide his show of effort, and all by means so true, simple, and apparently easy that one seems almost competent to follow him. One learns better in time. One gets to feel that these things were due in part to an instinct that the architect himself might not have been able to explain. The instinct vanishes as time creeps on. The halls at Rouen or at Blois are more easily understood; the Salle des Caryatides of Pierre Lescot at the Louvre, charming as it is, is simpler still; and one feels entirely at home in the Salle des Glaces which filled the ambition of Louis XIV at Versailles.

If any lingering doubt remains in regard to the professional cleverness of the architect and the thoroughness of his study, we had best return to the great hall, and pass through a low door in its extreme outer angle, up a few steps into a little room some thirteen feet square, beautifully vaulted, lighted, warmed by a large stone fireplace, and in the corner, a spiral staircase leading up to another square room above opening directly into the cloister. It is a little library or charter-house. The arrangement is almost too clever for gravity, as is the case with more than one arrangement in the Merveille. From the outside one

see that at this corner the architect had to provide a heavy tress against a double strain, and he built up from the rock ow a square corner tower as support, into which he worked piral staircase leading from the cellar up to the cloisters. t above the level of the great hall he managed to construct little room, a gem. The place was near and far; it was et and central; William of Saint-Pair, had he been still alive, ght have written his 'Roman' there; monks might have minated missals there. A few steps upward brought them to cloisters for meditation; a few more brought them to the rch for prayer. A few steps downward brought them to the at hall, for business, a few steps more led them into the re- ory, for dinner. To contemplate the goodness of God was mple joy when one had such a room to work in; such a spot he great hall to walk in, when the storms blew; or the cloisters which to meditate, when the sun shone; such a dining-room he refectory; and such a view from one's windows over the nite ocean and the guiles of Satan's quicksands. From the tlements of Heaven, William of Saint-Pair looked down it with envy.

Of all parts of the Merveille, in summer, the most charming st always have been the cloisters. Only the Abbey of the unt was rich and splendid enough to build a cloister like , all in granite, carved in forms as light as though it were od; with columns arranged in a peculiar triangular order t excited the admiration of Viollet-le-Duc. 'One of the most ious and complete cloisters that we have in France,' he said; ough in France there are many beautiful and curious sters. For another reason it has value. The architect meant o reassert, with all the art and grace he could command, the stery of love, of thought and poetry, in religion, over the sculine, military energy of the great hall below. The thir- nth century rarely let slip a chance to insist on this moral t love is law. Saint Francis was preaching to the birds in 5 at Assisi, and the architect built this cloister in 1226 at nt-Saint-Michel. Both sermons were saturated with the ing of the time, and both are about equally worth noting, ne aspires to feel the art.

A conscientious student has yet to climb down the many steps on the outside, and look up at the Merveille from below. Few buildings in France are better worth the trouble. The horizontal line at the roof measures two hundred and thirty-five feet. The vertical line of the buttresses measures in round numbers one hundred feet. To make walls of that height and length stand up at all was no easy matter, as Robert de Torigny had shown, and so the architect buttressed them from bottom to top with twelve long buttresses against the thrust of the interior arches and three more, bearing against the interior walls. This gives on the north front, fifteen strong vertical lines in a space of two hundred and thirty-five feet. Between these lines the windows tell their story; the seven long windows of the refectory on one side; the seven rounded windows of the hall on the other. Even the corner tower with the charter-house becomes as simple as the rest. The sum of this impossible wall, and its exaggerated vertical lines, is strength and intelligence at rest.

The whole Mount still kept the grand style; it expressed the unity of Church and State, God and Man, Peace and War, Life and Death, Good and Bad; it solved the whole problem of the universe. The priest and the soldier were both at home here, in 1215 as in 1115 or in 1058; the politician was not outside of it; the sinner was welcome; the poet was made happy in his own spirit, with a sympathy, almost an affection, that suggests a habit of verse in the Abbot as well as in the architect. God reconciles all. The world is an evident, obvious, sacred harmony. Even the discord of war is a detail on which the Abbey refuses to insist. Not till two centuries afterwards did the Mount take on the modern expression of war as a discord in God's providence. Then, in the early years of the fifteenth century, Abbot Pierre le Roy plastered the gate of the châtelet, as you now see it, over the sunny thirteenth-century entrance called Belle Chaise, which had treated mere military construction with a sort of quiet contempt. You will know what a châtelet is when you meet another; it frowns in a spirit quite alien to the twelfth century; it jars on the religion of the place; it foreboded wars of religion; dissolution of society; loss of unity; the end o

orld. Nothing is sadder than the catastrophe of Gothic art, gion, and hope.

One looks back on it all as a picture; a symbol of unity; an ertion of God and Man in a bolder, stronger, closer union n ever was expressed by other art; and when the idea is orbed, accepted, and perhaps partially understood, one y move on.

IV. Normandy and the Île de France

FROM Mont-Saint-Michel, the architectural road lead across Normandy, up the Seine to Paris, and not directl through Chartres, which lies a little to the south. In th empire of architecture, Normandy was one kingdom, Brittan another; the Île de France, with Paris, was a third; Tourain and the valley of the Loire were a fourth; and in the centre, th fighting-ground between them all, lay the counties of Chartre and Dreux. Before going to Chartres one should go up th Seine and down the Loire, from Angers to Le Mans, and s enter Chartres from Brittany after a complete circle; but if w set out to do our pleasure on that scale, we must start from th Pyramid of Cheops. We have set out from Mont-Saint-Michel we will go next to Paris.

The architectural highway lies through Coutances, Bayeux Caen, Rouen, and Mantes. Every great artistic kingdom solve its architectural problems in its own way, as it did its religious political, and social problems, and no two solutions were eve quite the same; but among them the Norman was commonl the most practical, and sometimes the most dignified. We ca test this rule by the standard of the first town we stop at— Coutances. We can test it equally well at Bayeux or Caen, bu Coutances comes first after Mont-Saint-Michel; let us begi with it, and state the problems with their Norman solution so that it may be ready at hand to compare with the Frenc solution, before coming to the solution at Chartres.

he cathedral at Coutances is said to be about the age of the veille (1200–50), but the exact dates are unknown, and the is so Norman as to stand by itself; yet the architect has pled with more problems than one need hope to see solved ny single church in the Île de France. Even at Chartres, ough the two stone flèches are, by exception, completed, are not of the same age, as they are here. Neither at rtres nor at Paris, nor at Laon or Amiens or Rheims or ges, will you see a central tower to compare with the enor- s pile at Coutances. Indeed the architects of France failed lve this particular church problem, and we shall leave it nd us in leaving Normandy, although it is the most effective ire of any possible church. 'A clocher of that period (*circa*), built over the croisée of a cathedral, following lines so y, should be a monument of the greatest beauty; unfor- tely we possess not a single one in France. Fire, and the l of man more than time, have destroyed them all, and we on our greatest religious edifices no more than bases and nents of these beautiful constructions. The cathedral of tances alone has preserved its central clocher of the thir- th century, and even there it is not complete; its stone e is wanting. As for its style, it belongs to Norman architec- and diverges widely from the character of French architec- ' So says Viollet-le-Duc; but although the great churches ne most part never had central clochers, which, on the scale miens, Bourges, or Beauvais, would have required an im- ble mass, the smaller churches frequently carry them still, they are, like the dome, the most effective features they arry. They were made to dominate the whole.

o doubt the flèche is wanting at Coutances, but you can ly it in imagination from the two flèches of the western r, which are as simple and severe as the spear of a man-at- . Supply the flèche, and the meaning of the tower cannot istaken; it is as military as the 'Chanson de Roland'; it is nan-at-arms himself, mounted and ready for battle, spear st. The mere seat of the central tower astride of the church, m, so fixed, so serious, so defiant, is Norman, like the seat

of the Abbey Church on the Mount; and at Falaise, wher William the Bastard was born, we shall see a central tower o the church which is William himself, in armour, on horseback ready to fight for the Church, and perhaps, in his bad mood against it. Such militant churches were capable of forcin Heaven itself; all of them look as though they had fought a Hastings or stormed Jerusalem. Wherever the Norman centra clocher stands, the Church Militant of the eleventh centur survives; — not the Church of Mary Queen, but of Micha the Archangel; — not the Church of Christ, but of God th Father — Who never lied!

Taken together with the flèches of the façade, this clocher c Coutances forms a group such as one very seldom sees. Th two towers of the façade are something apart, quite by them selves among the innumerable church-towers of the Gothi time. We have got a happy summer before us, merely in lookin for these church-towers. There is no livelier amusement for fin weather than in hunting them as though they were mushroom and no study in architecture nearly so delightful. No work o man has life like the flèche. One sees it for a greater distanc and feels it for a longer time than is possible with any othe human structure, unless it be the dome. There is more play o light on the octagonal faces of the flèche as the sun move around them than can be got out of the square or the cone o any other combination of surfaces. For some reason, the face of the hexagon or octagon are more pleasing than the rounde surfaces of the cone, and Normandy is said to be peculiarly th home of this particularly Gothic church ornament; yet cloche and flèches are scattered all over France until one gets to loo for them on the horizon as though every church in every haml were an architectural monument. Hundreds of them literall are so — Monuments Historiques — protected by the Gover ment; but when you undertake to compare them, or to decid whether they are more beautiful in Normandy than in the Île d France, or in Burgundy, or on the Loire or the Charente, yo are lost. Even the superiority of the octagon is not evident t every one. Over the little church at Fenioux on the Charent

very far from La Rochelle, is a conical steeple that an infidel ht adore; and if you have to decide between provinces, you st reckon with the decision of architects and amateurs, who n to be agreed that the first of all flèches is at Chartres, the ond at Vendôme, not far from Blois in Touraine, and the d at Auxerre in Burgundy. The towers of Coutances are in the list, nor are those at Bayeux nor those at Caen. nce is rich in art. Yet the towers of Coutances are in some s as interesting, if not as beautiful, as the best.

The two stone flèches here, with their octagon faces, do not cend, as in other churches, to their resting-place on a square er, with the plan of junction more or less disguised; they ow out nests of smaller flèches, and these cover buttressing ner towers, with lines that go directly to the ground. Whether artist consciously intended it or not, the effect is to broaden façade and lift it into the air. The façade itself has a dis-tly military look, as though a fortress had been altered into hurch. A charming arcade at the top has the air of being own across in order to disguise the alteration, and perhaps es much of its charm to the contrast it makes with the severity military lines. Even the great west window looks like an rthought; one's instinct asks for a blank wall. Yet, from ground up to the cross on the spire, one feels the Norman ure throughout, animating the whole, uniting it all, and wding into it an intelligent variety of original motives that uld build a dozen churches of late Gothic. Nothing about it tereotyped or conventional — not even the conventionality. f you have any doubts about this, you have only to compare photograph of Coutances with the photograph of Chartres; yet, surely, the façade of Chartres is severe enough to satisfy nt Bernard himself. With the later fronts of Rheims and iens, there is no field for comparison; they have next to hing in common; yet Coutances is said to be of the same date n Rheims, or nearly so, and one can believe it when one rs the interior. The Normans, as they slowly reveal them-les, disclose most unexpected qualities; one seems to sound terranean caverns of feeling hidden behind their iron nasals.

No other cathedral in France or in Europe has an interior more refined — one is tempted to use even the hard-worn adjective more tender — or more carefully studied. One test is crucial here and everywhere. The treatment of the apse and choir is the architect's severest standard. This is a subject not to be touched lightly; one to which we shall have to come back in a humble spirit, prepared for patient study, at Chartres; but the choir of Coutances is a cousin to that of Chartres, as the façades are cousins; Coutances like Chartres belongs to Notre Dame and is felt in the same spirit; the church is built for the choir and apse, rather than for the nave and transepts; for the Virgin rather than for the public. In one respect Coutances is even more delicate in the feminine charm of the Virgin's peculiar grace than Chartres, but this was an afterthought of the fourteenth century. The system of chapels radiating about the apse was extended down the nave, in an arrangement 'so beautiful and so rare,' according to Viollet-le-Duc, that one shall seek far before finding its equal. Among the unexpected revelations of human nature that suddenly astonish historians one of the least reasonable was the passionate outbreak of religious devotion to the ideal of feminine grace, charity, and love that took place here in Normandy while it was still a part of the English kingdom, and flamed up into almost fanatical frenzy among the most hard-hearted and hard-headed race in Europe.

So in this church, in the centre of this arrangement of apse and chapels with their quite unusual — perhaps quite singular — grace, the four huge piers which support the enormous central tower, offer a tour de force almost as exceptional as the refinement of the chapels. At Mont-Saint-Michel, among the monks, the union of strength and grace was striking, but at Coutances it is exaggerated, like Tristram and Iseult — a *romance* of chivalry. The four 'enormous' columns of the croisée, carrying as Viollet-le-Duc says, the 'enormous octagonal tower' — like Saint Christopher supporting the Christ-child, before the image of the Virgin, in her honour. Nothing like this can be seen at Chartres, or at any of the later palaces which France built for the pleasure of the Queen of Heaven.

Ve are slipping into the thirteenth century again; the tempta-
i is terrible to feeble minds and tourist natures; but a great
ss of twelfth- and eleventh-century work remains to be seen
felt. To go back is not so easy as to begin with it; the heavy
nd arch is like old cognac compared with the champagne
he pointed and fretted spire; one must not quit Coutances
nout making an excursion to Lessay on the road to Cher-
rg, where is a church of the twelfth century, with a square
er and almost untouched Norman interior, that closely
eats the Abbey Church at Mont-Saint-Michel. 'One of the
st complete models of Romanesque architecture to be found
Normandy,' says M. de Caumont. The central clocher will
in a photographic collection of square towers, to replace
t which was lost on the Mount; and a second example is
r Bayeux, at a small place called Cérisy-la-Forêt, where the
rch matches that on the Mount, according to M. Corroyer;
Cérisy-la-Forêt was also an abbey, and the church, built by
hard II, Duke of Normandy, at the beginning of the
enth century, was larger than that on the Mount. It still
ps its central tower.

ll this is intensely Norman, and is going to help very little
France; it would be more useful in England; but at Bayeux
great cathedral much more to the purpose, with two superb
tern towers crowned by stone flèches, cousins of those at
itances, and distinctly related to the twelfth-century flèche
Chartres. 'The Normans,' says Viollet-le-Duc, 'had not that
inct of proportion which the architects of the Île de France,
uvais, and Soissons possessed to a high degree; yet the bold-
of their constructions, their perfect execution, the elevation
he flèches, had evident influence on the French school
perly called, and that influence is felt in the old spire of
artres.' The Norman seemed to show distinction in another
ect which the French were less quick to imitate. What they
an, they completed. Not one of the great French churches
two stone spires complete, of the same age, while each of
little towns of Coutances, Bayeux, and Caen contains its
i towers and flèches of stone, as solid and perfect now as they

were seven hundred years ago. Still another Norman character is worth noting, because this is one part of the influence felt at Chartres. If you look carefully at the two western towers of the Bayeux Cathedral, perhaps you will feel what is said to be the strength of the way they are built up. They rise from their foundation with a quiet confidence of line and support, which passes directly up to the weather-cock on the summit of the flèches. At the plane where the square tower is changed into the octagon spire, you will see the corner turrets and the long intermediate windows which effect the change without disguising it. One can hardly call it a device; it is so simple and evident a piece of construction that it does not need to be explained; yet you will have to carry a photograph of this flèche to Chartres, and from there to Vendôme, for there is to be a great battle of flèches about this point of junction, and the Norman scheme is a sort of standing reproach to the French.

Coutances and Bayeux are interesting, but Caen is a Romanesque Mecca. There William the Conqueror dealt with the same architectural problems and put his solution in his Abbaye-aux-Hommes, which bears the name of Saint Stephen. Queen Matilda put her solution into her Abbaye-aux-Femmes, the Church of the Trinity. One ought particularly to look at the beautiful central clocher of the church at Vaucelles in the suburbs; and one must drive out to Thaon to see its eleventh-century church, with a charming Romanesque blind arcade on the outside, and a little clocher, 'the more interesting to us,' according to Viollet-le-Duc, 'because it bears the stamp of the traditions of defence of the primitive towers which were built over the porches.' Even 'a sort of chemin de ronde' remains around the clocher, perhaps once provided with a parapet of defence. 'C'est là, du reste, un charmant édifice.' A tower with stone flèche, which actually served for defence in a famous recorded instance, is that of the church at Secqueville, not far off; this beautiful tower, as charming as anything in Norman art, is known to have served as a fortress in 1105, which gives a valuable date. The pretty old Romanesque front of the little church at Ouistreham, with its portal that seems to come fresh

n Poitiers and Moissac, can be taken in, while driving past; we must on no account fail to make a serious pilgrimage to nt-Pierre-sur-Dives, where the church-tower and flèche are only classed among the best in Normandy, but have an exact e, 1145, and a very close relation with Chartres, as will ear. Finally, if for no other reason, at least for interest in ette, the tanner's daughter, one must go to Falaise, and look he superb clocher of Saint-Gervais, which was finished and secrated by 1135.

ome day, if you like, we can follow this Romanesque style to south, and on even to Italy where it may be supposed to e been born; but France had an architectural life fully ousand years old when these twelfth-century churches were lt, and was long since artistically, as she was politically, ependent. The Normans were new in France, but not the manesque architecture; they only took the forms and stamped them their own character. It is the stamp we want to dis-guish, in order to trace up our lines of artistic ancestry. The rman twelfth-century stamp was not easily effaced. If we e not seen enough of it at Mont-Saint-Michel, Coutances, eux, and Caen, we can go to Rouen, and drive out to cherville, and visit the ruined Abbey of Jumièges. Wherever re is a church-tower with a tall flèche, as at Boscherville, queville, Saint-Pierre-sur-Dives, Caen, and Bayeux, Viollet-Duc bids notice how the octagonal steeple is fitted on to the are tower. Always the passage from the octagon to the are seems to be quite simply made. The Gothic or Roman-ue spire had the advantage that a wooden flèche was as sonable a covering for it as a stone one, and the Normans ht have indulged in freaks of form very easily, if they chose, they seem never to have thought of it. The nearest approach he freedom of wooden roofs is not in the lofty flèches, but in covering of the great square central towers, like Falaise or ucelles, a huge four-sided roof which tries to be a flèche, and s massive as the heavy structure it covers.

The last of the Norman towers that Viollet-le-Duc insists n is the so-called Clocher de Saint-Romain, the northern

tower on the west front of the Cathedral of Rouen. Unfortunately it has lost its primitive octagon flèche if it ever had one, but 'the tower remains entire, and,' according to Viollet-le-Duc, 'is certainly one of the most beautiful in this part of France; it offers a mixture of the two styles of the Île de France and of Normandy, in which the former element dominates'; it is of the same date as the old tower of Chartres (1140–60), and follows the same interior arrangement; 'but here the petty, confused disposition of the Norman towers, with their division into stories of equal height, has been adopted by the French master builder, although in submitting to these local customs he has still thrown over his work the grace and finesse, the study of detail, the sobriety in projections, the perfect harmony between the profiles, sculpture, and the general effect of the whole, which belong to the school he came from. He has managed his voids and solids with especial cleverness, giving the more importance to the voids, and enlarging the scale of his details, as the tower rose in height. These details have great beauty; the construction is executed in materials of small dimensions with the care that the twelfth-century architects put into their building; the profiles project little, and, in spite of their extreme finesse, produce much effect; the buttresses are skilfully planted and profiled. The staircase, which, on the east side, derange the arrangement of the bays, is a chef-d'oeuvre of architecture.' This long panegyric, by Viollet-le-Duc, on French taste at the expense of Norman temper, ought to be read, book in hand, before the Cathedral of Rouen, with photographs of Bayeux to compare. Certain it is that the Normans and the French never talked quite the same language, but it is equally certain that the Norman language, to the English ear, expressed itself quite as clearly as the French, and sometimes seemed to have more to express.

The complaint of the French artist against the Norman is the 'mesquin' treatment of dividing his tower into storeys of equal height. Even in the twelfth century and in religious architecture, artists already struggled over the best solution of this particularly American problem of the twentieth century, and

en tourists return to New York, they may look at the twenty-
rey towers which decorate the city, to see whether the Nor-
n or the French plan has won; but this, at least, will be sure
advance: the Norman will be the practical scheme which
es the facts, and stops; while the French will be the graceful
, which states the beauties, and more or less fits the facts to
them. Both styles are great: both can sometimes be tiresome.
Here we must take leave of Normandy; a small place, but one
ch, like Attica or Tuscany, has said a great deal to the world,
even goes on saying things — not often in the famous *genre*
yeux — to this day; for Gustave Flaubert's style is singularly
that of the Tour Saint-Romain and the Abbaye-aux-
mmes. Going up the Seine one might read a few pages of
letters, or of 'Madame de Bovary,' to see how an old art
smutes itself into a new one, without changing its methods.
ne critics have thought that at times Flaubert was mesquin
the Norman tower, but these are, as the French say, the
cts of his qualities; we can pass over them, and let our eyes
on the simplicity of the Norman flèche which pierces the
of our horizon.

The last of Norman art is seen at Mantes, where there is
tle church of Gassicourt that makes the farthest reach of the
e. In arms as in architecture, Mantes barred the path of
rman conquest; William the Conqueror met his death here
087. Geographically Mantes is in the Île de France, less
n forty miles from Paris. Architectually, it is Paris itself;
le, forty miles to the southward, is Chartres, an independent
nly feudally dependent country. No matter how hurried
architectural tourist may be, the boundary-line of the Île de
nce is not to be crossed without stopping. If he came down
n the north or east, he would have equally to stop — either
Beauvais, or at Laon, or Noyon, or Soissons — because there
n architectural *douane* to pass, and one's architectural
gage must be opened. Neither Notre Dame de Paris nor
re Dame de Chartres is quite intelligible unless one has first
Notre Dame de Mantes, and studied it in the sacred
rces of M. Viollet-le-Duc.

Notre Dame de Mantes is a sister to the Cathedral of Paris 'built at the same time, perhaps by the same architect, and reproducing its general dispositions, its mode of structure, and some of its details'; but the Cathedral of Paris has been greatly altered, so that its original arrangement is quite changed, while the church at Mantes remains practically as it was, when both were new, about the year 1200. As nearly as the dates can be guessed, the cathedral was finished, up to its vaulting, in 1170 and was soon afterwards imitated on a smaller scale at Mantes. The scheme seems to have been unsatisfactory because of defects in the lighting, for the whole system of fenestration had been changed at Paris before 1230, naturally at great cost, since the alterations, according to Viollet-le-Duc (articles 'Cathedral' and 'Rose,' and allusions 'Triforium'), left little except the ground-plan unchanged. To understand the Paris design of 1160–70, which was a long advance from the older plans, one must come to Mantes; and, reflecting that the great triumph of Chartres was its fenestration, which must have been designed immediately after 1195, one can understand how, in this triangle of churches only forty or fifty miles apart, the architects watching each other's experiments, were influenced, almost from day to day, by the failures or successes which they saw. The fenestration which the Paris architect planned in 1160–70 and repeated at Mantes, 1190–1200, was wholly abandoned and a new system introduced, immediately after the success of Chartres in 1210.

As they now stand, Mantes is the oldest. While conscientiously trying to keep as far away as we can from technique, about which we know nothing and should care if possible still less, only ignorance would help us to feel what we do not understand; still the conscience is happier if it gains a little conviction founded on what it thinks a fact. Even theologians — even the great theologians of the thirteenth century — even Saint Thomas Aquinas himself — did not trust to faith alone, or assume the existence of God; and what Saint Thomas found necessary in philosophy may also be a sure source of consolation in the difficulties of art. The church at Mantes is a very early

ct in Gothic art; indeed, it is one of the earliest; for our purses it will serve as the very earliest of pure Gothic churches, er the Transition, and this we are told to study in its windows. Before one can get near enough fairly to mark the details of e façade, one sees the great rose window which fills a space arly twenty-seven feet in width. Gothic fanatics commonly ckon the great rose windows of the thirteenth century as the ost beautiful creation of their art, among the details of ornaent; and this particular rose is the direct parent of that at hartres, which is classic like the Parthenon, while both of them rved as models or guides for that at Paris which dates from 20, those in the north and south transepts at Rheims, about 30, and so on, from parent to child, till the rose faded forever. o doubt there were Romanesque roses before 1200, and we all see them, but this rose of Mantes is the first Gothic rose great dimensions, and that from which the others grew; in its nplicity, its honesty, its large liberality of plan, it is also one the best, if M. Viollet-le-Duc is a true guide; but you will see hundred roses, first or last, and can choose as you would long the flowers.

More interesting than even the great rose of the portal is the mark that the same rose-motive is carried round the church roughout its entire system of fenestration. As one follows it, the outside, one sees that all the windows are constructed on e same rose-scheme; but the most curious arrangement is in e choir inside the church. You look up to each of the windows rough a sort of tunnel or telescope: an arch enlarging outards, the roses at the end resembling 'oeil-de-boeufs,' 'oculi.' curious is this arrangement that Viollet-le-Duc has shown under the head 'Triforium,' in drawings and sections which y one can study who likes; its interest to us is that this arrangeent in the choir was probably the experiment which proved ailure in Notre Dame at Paris, and led to the tearing-out the l windows and substituting those which still stand. Perhaps e rose did not give enough light, although the church at antes seems well lighted, and even at Paris the rose windows main in the transepts and in one bay of the nave.

All this is introduction to the windows of Chartres, but these three churches open another conundrum as one learns, bit by bit, a few of the questions to be asked of the forgotten Middle Ages. The church-towers at Mantes are very interesting, inside and out; they are evidently studied with love and labour by their designer; yet they have no flèches. How happens it that Notre Dame at Paris also has no flèches, although the towers, according to Viollet-le-Duc, are finished in full preparation for them? This double omission on the part of the French architect seems exceedingly strange, because his rival at Chartres finished his flèche just when the architect of Paris and Mantes was finishing his towers (1175–1200). The Frenchman was certainly consumed by jealousy at the triumph never attained or anything like the same scale by any architect of the Île de France; and he was actually engaged at the time on at least two flèches, close to Paris, one at Saint-Denis, another of Saint-Leu-d'Esserent, which proved the active interest he took in the difficulties conquered at Chartres, and his perfect competence to deal with them.

Indeed, one is tempted to say that these twin churches, Paris and Mantes, are the only French churches of the time (1200) which were left without a flèche. As we go from Mantes to Paris, we pass, about half-way, at Poissy, under the towers of a very ancient and interesting church which has the additional merit of having witnessed the baptism of Saint Louis in 1215. Parts of the church at Poissy go back to the seventh and ninth centuries. The square base of the tower dates back before the time of Hugh Capet, to the Carolingian age, and belongs, like the square tower of Saint-Germain-des-Prés at Paris, to the old defensive military architecture; but it has a later, stone flèche and it has, too, by exception a central octagonal clocher, with a timber flèche which dates from near 1100. Paris itself has not much to show, but in the immediate neighbourhood are a score of early churches with charming flèches, and at Étampes, about thirty-five miles to the south, is an extremely interesting church with an exquisite flèche, which may claim an afternoon to visit. That at Saint-Leu-d'Esserent is a still easier excursion,

one need only drive over from Chantilly a couple of miles. e fascinating old Abbey Church of Saint-Leu looks down over valley of the Oise, and is a sort of antechamber to Chartres, ar as concerns architecture. Its flèche, built towards 1160 — en that at Chartres was rising — is unlike any other, and ws how much the French architects valued their lovely nch creation. On its octagonal faces, it carries upright ons, or lances, as a device for relieving the severity of the lines; a device both intelligent and amusing, though it was er imitated. A little farther from Paris, at Senlis, is another he, which shows still more plainly the effort of the French hitects to vary and elaborate the Chartres scheme. As for on, which is interesting throughout, and altogether the most ightful building in the Île de France, the flèches are gone, the towers are there, and you will have to study them, before dying those at Chartres, with all the intelligence you have spare. They were the chef-d'oeuvre of the mediaeval archi-t, in his own opinion.

All this makes the absence of flèches at Paris and Mantes the re strange. Want of money was certainly not the cause, since Parisians had money enough to pull their whole cathedral pieces at the very time when flèches were rising in half the ns within sight of them. Possibly they were too ambitious, could find no design that seemed to satisfy their ambition. ey took pride in their cathedral, and they tried hard to make ir shrine of Our Lady rival the great shrine at Chartres. course, one must study their beautiful church, but this can done at leisure, for, as it stands, it is later than Chartres and re conventional. Saint-Germain-des-Prés leads more directly Chartres; but perhaps the church most useful to know is no ger a church at all, but a part of the Museum of Arts et tiers — the desecrated Saint-Martin-des-Champs, a name ich shows that it dates from a time when the present Porte-nt-Martin was far out among fields. The choir of Saint-rtin, which is all that needs noting, is said by M. Enlart to e from about 1150. Hidden in a remnant of old Paris near Pont Notre Dame, where the student life of the Middle

Ages was to be most turbulent and the Latin Quarter most renowned, is the little church of Saint-Julien-le-Pauvre, towards 1170. On the whole, further search in Paris would not greatly help us. If one is to pursue the early centuries, one must go farther afield, for the schools of Normandy and the Île de France were only two among half a dozen which flourished in the various provinces that were to be united in the kingdom of Saint Louis and his successors. We have not even looked to the south and east, whence the impulse came. The old Carolingian school, with its centre at Aix-la-Chapelle, is quite beyond our horizon. The Rhine had a great Romanesque architecture of its own. One broad architectural tide swept up the Rhone and filled the Burgundian provinces as far as the watershed of the Seine. Another lined the Mediterranean, with a centre at Arles. Another spread up the western rivers, the Charente and the Loire, reaching to Le Mans and touching Chartres. Two more lay in the centre of France, spreading from Périgord and Clermont in Auvergne. All these schools had individual character and all have charm; but we have set out to go from Mont-Saint-Michel to Chartres in three centuries, the eleventh, twelfth, and thirteenth, trying to get, on the way, not technical knowledge; not accurate information; not correct views either on history, art, or religion; not anything that can possibly be useful or instructive; but only a sense of what those centuries had to say, and a sympathy with their ways of saying it. Let us go straight to Chartres!

V. Towers and Portals

FOR a first visit to Chartres, choose some pleasant morning when the lights are soft, for one wants to be welcome, and the cathedral has moods, at times severe. At best, the auce is a country none too gay.

The first glimpse that is caught, and the first that was meant be caught, is that of the two spires. With all the education t Normandy and the Île de France can give, one is still orant. The spire is the simplest part of the Romanesque or thic architecture, and needs least study in order to be felt. s a bit of sentiment almost pure of practical purpose. It tells whole of its story at a glance, and its story is the best that hitecture had to tell, for it typified the aspirations of man the moment when man's aspirations were highest. Yet nine sons out of ten — perhaps ninety-nine in a hundred — who ne within sight of the two spires of Chartres will think it est if they are told that the smaller of the two, the simpler, one that impresses them least, is the one which they are ected to recognize as the most perfect piece of architecture he world. Perhaps the French critics might deny that they ke any such absolute claim; in that case you can ask them at their exact claim is; it will always be high enough to onish the tourist.

Astonished or not, we have got to take this southern spire of Chartres Cathedral as the object of serious study, and before ing it as art, must take it as history. The foundations of this

tower — always to be known as the 'old tower' — are supposed to have been laid in 1091, before the first crusade. The flèche was probably half a century later (1145–70). The foundations of the new tower, opposite, were laid not before 1110, when also the portal which stands between them, was begun with the three lancet windows above it, but not the rose. For convenience, this old façade — including the portal and the two towers, but not the flèches, and the three lancet windows, but not the rose — may be dated as complete about 1150.

Originally the whole portal — the three doors and the three lancets — stood nearly forty feet back, on the line of the interior foundation, or rear wall of the towers. This arrangement threw the towers forward, free on three sides, as at Poitiers, and gave room for a parvis, before the portal — a porch, roofed over, to protect the pilgrims who always stopped there to pray before entering the church. When the church was rebuilt after the great fire of 1194, and the architect was required to enlarge the interior, the old portal and lancets were moved bodily forward, to be flush with the front walls of the two towers, as you see the façade today; and the façade itself was heightened, to give room for the rose, and to cover the loftier pignon and vaulting behind. Finally, the wooden roof, above the stone vault, was masked by the Arcade of Kings and its railing, completed in the taste of Philip the Hardy, who reigned from 1270 to 1285.

These changes have, of course, altered the values of all the parts. The portal is injured by being thrown into a glare of light, when it was intended to stand in shadow, as you will see in the north and south porches over the transept portals. The towers are hurt by losing relief and shadow; but the old flèche is obliged to suffer the cruellest wrong of all by having its right shoulder hunched up by half of a huge rose and the whole of a row of kings, when it was built to stand free, and to soar above the whole façade from the top of its second storey. One can easily figure it so and replace the lost parts of the old façade, more or less at haphazard, from the front of Noyon.

What an outrage it was you can see by a single glance at the new flèche opposite. The architect of 1500 has flatly refused to

mit to such conditions, and has insisted, with very proper
-respect, on starting from the balustrade of the Arcade of
ngs as his level. Not even content with that, he has carried
his square tower another lofty storey before he would consent
ouch the heart of his problem, the conversion of the square
er into the octagon flèche. In doing this, he has sacrificed
e more the old flèche; but his own tower stands free as it
uld.

t Vendôme, when you go there, you will be in a way to
reciate still better what happened to the Chartres flèche;
the clocher at Vendôme, which is of the same date — Viollet-
Duc says earlier, and Enlart, 'after 1130' — stood and still
nds free, like an Italian campanile, which gives it a vast
antage. The tower of Saint-Leu-d'Esserent, also after 1130,
nds free, above the second storey. Indeed, you will hardly
l, in the long list of famous French spires, another which has
n treated with so much indignity as this, the greatest and
st famous of all; and perhaps the most annoying part of it is
t you must be grateful to the architect of 1195 for doing no
se. He has, on the contrary, done his best to show respect
the work of his predecessor, and has done so well that,
dicapped as it is, the old tower still defies rivalry. Nearly
e hundred and fifty feet high, or, to be exact, 106.5 metres
n the church floor, it is built up with an amount of intel-
nce and refinement that leaves to unprofessional visitors
chance to think a criticism — much less to express one.
haps — when we have seen more — and feel less — who
ws? — but certainly not now!

The greatest and surely the most beautiful monument of this
d that we possess in France,' says Viollet-le-Duc; but al-
ugh an ignorant spectator must accept the architect's
ision on a point of relative merit, no one is compelled to
ept his reasons, as final. 'There is no need to dwell,' he
tinues, 'upon the beauty and the grandeur of composition
which the artist has given proof of rare sobriety, where all
effects are obtained, not by ornaments, but by the just and
ful proportion of the different parts. The transition, so hard

to adjust, between the square base and the octagon of the flèche, is managed and carried out with an address which has not been surpassed in similar monuments.' One stumbles a little at the word 'adresse.' One never caught one's self using the word in Norman churches. Your photographs of Bayeux or Boscherville or Secqueville will show you at a glance whether the term 'adresse' applies to them. Even Vendôme would rather be praised for 'droiture' than for 'adresse.' — Whether the word 'adresse' means cleverness, dexterity, adroitness, or simple technical skill, the thing itself is something which the French have always admired more than the Normans ever did. Viollet-le-Duc himself seems to be a little uncertain whether to lay most stress on the one or the other quality: 'If one tries to appreciate the conception of this tower,' quotes the Abbé Bulteau (II, 84), 'one will see that it is as frank as the execution is simple and skilful. Starting from the bottom, one reaches the summit of the flèche without marked break; without anything to interrupt the general form of the building. This clocher, whose base is broad (pleine), massive, and free from ornament, transforms itself, as it springs, into a sharp spire with eight faces, without its being possible to say where the massive construction ends and the light construction begins.'

Granting, as one must, that this concealment of the transition is a beauty, one would still like to be quite sure that the Chartres scheme is the best. The Norman clochers being thrown out, and that at Vendôme being admittedly simple, the Clocher de Saint-Jean on the Church of Saint-Germain at Auxerre seems to be thought among the next in importance, although it is only about one hundred and sixty feet in height (forty-nine metres), and therefore hardly in the same class with Chartres. Any photograph shows that the Auxerre spire is also simple; and that at Étampes you have seen already to be of the Vendôme rather than of the Chartres type. The clocher at Senlis is more 'habile'; it shows an effort to be clever, and offers a standard of comparison; but the mediaeval architects seem to have thought that none of them bore rivalry with Laon for technical skill. One of these professional experts, named Villard de Hon-

ourt, who lived between 1200 and 1250, left a notebook ich you can see in the vitrines of the Bibliothèque Nationale he Rue Richelieu, and which is the source of most that is wn about the practical ideas of mediaeval architects. He ne to Chartres, and, standing here before the doors, where are standing, he made a rough drawing, not of the tower, of the rose, which was then probably new, since it must e been planned between 1195 and 1200. Apparently the er did not impress him strongly, for he made no note of it; on the other hand, when he went to Laon, he became ement in praise of the cathedral tower there, which must e been then quite new: 'I have been in many countries, as can find in this book. In no place have I ever such a tower n as that of Laon. — J'ai esté en mult de tieres, si cum vus és trover en cest livre. En aucun liu onques tel tor ne vi com cele de Loon.' The reason for this admiration is the same t Viollet-le-Duc gives for admiring the tower of Chartres — 'adresse' with which the square is changed into the octagon. only is the tower itself changed into the flèche without ble junction, under cover of four corner tourelles, of open k, on slender columns, which start as squares; but the relles also convert themselves into octagons in the very act of ng, and end in octagon flèches that carry up — or once ried up — the lines of profile to the central flèche that soared ve them. Clearly this device far surpassed in cleverness the eme of Chartres, which was comparatively heavy and ctural, the weights being adjusted for their intended work, le the transformation at Laon takes place in the air, and llenges discovery in defiance of one's keenest eyesight. gard . . . how the tourelles pass from one disposition to ther, in rising! Meditate on it!'

he flèche of Laon is gone, but the tower and tourelles are there to show what the architects of the thirteenth century ught their most brilliant achievement. One cannot compare artres directly with any of its contemporary rivals, but one at least compare the old spire with the new one which nds opposite and rises above it. Perhaps you will like the new

best. Built at a time which is commonly agreed to have had the highest standard of taste, it does not encourage tourist or artist to insist on setting up standards of his own against it. Begun in 1507, it was finished in 1517. The dome of Saint Peter's at Rome, over which Bramante and Raphael and Michael Angelo toiled, was building at the same time; Leonardo da Vinci was working at Amboise; Jean Bullant, Pierre Lescot, and their patron, Francis I, were beginning their architectural careers. Four hundred years, or thereabouts, separated the old spire from the new one; and four hundred more separate the new one from us. If Viollet-le-Duc, who himself built Gothic spires, had cared to compare his flèches at Clermont-Ferrand with the new flèche at Chartres, he might perhaps have given us a rule where 'adresse' ceases to have charm, and where detail becomes tiresome; but in the want of a schoolmaster to lay down a law of taste, you can admire the new flèche as much as you please. Of course, one sees that the lines of the new tower are not clean, like those of the old; the devices that cover the transition from the square to the octagon are rather too obvious; the proportion of the flèche to the tower quite alters the values of the parts; a rigid classical taste might even go so far as to hint that the new tower, in comparison with the old, showed signs of a certain tendency toward a dim and distant vulgarity. There can be no harm in admitting that the new tower is a little wanting in repose for a tower whose business is to counterpoise the very classic lines of the old one; but no law compels you to insist on absolute repose in any form of art; if such a law existed, it would have to deal with Michael Angelo before it dealt with us. The new tower has many faults, but it has great beauties, as you can prove by comparing it with other late Gothic spires, including those of Viollet-le-Duc. Its chief fault is to be where it is. As a companion to the crusades and to Saint Bernard, it lacks austerity. As a companion to the Virgin of Chartres, it recalls Diane de Poitiers.

In fact, the new tower, which in years is four centuries younger than its neighbour, is in feeling fully four hundred years older. It is self-conscious if not vain; its coiffure is elaborately arranged

cover the effects of age, and its neck and shoulders are ered with lace and jewels to hide a certain sharpness of leton. Yet it may be beautiful, still; the poets derided the nkles of Diane de Poitiers at the very moment when King nry II idealized her with the homage of a Don Quixote; an nosphere of physical beauty and decay hangs about the ole Renaissance.

One cannot push these resemblances too far, even for the elfth century and the old tower. Exactly what date the old ver represents, as a social symbol, is a question that might be much disputed as the beauty of Diane de Poitiers, and yet f the interest of architecture consists in the sincerity of its lection of the society that builds. In mere time, by actual e, the old tower represents the second crusade, and when, in 50, Saint Bernard was elected chief of that crusade in this y cathedral — or rather, in the cathedral of 1120, which was rned — the workmen were probably setting in mortar the nes of the flèche as we now see them; yet the flèche does not resent Saint Bernard in feeling, for Saint Bernard held the ole array of church-towers in horror as signs merely of play, wealth and pride. The flèche rather represents Abbot ger of Saint-Denis, Abbot Peter the Venerable of Cluny, bot Abélard of Saint-Gildas-de-Rhuys, and Queen Eleanor Guienne, who had married Louis-le-Jeune in 1137; who had en the cross from Saint Bernard in 1147; who returned from Holy Land in 1149; and who compelled Saint Bernard to prove her divorce in 1152. Eleanor and Saint Bernard were turies apart, yet they lived at the same time and in the same rch. Speaking exactly, the old tower represents neither of m; the new tower itself is hardly more florid than Eleanor s; perhaps less so, if one can judge from the fashions of the rt-dress of her time. The old tower is almost Norman, while anor was wholly Gascon, and Gascony was always florid hout being always correct. The new tower, if it had been lt in 1150, like the old one, would have expressed Eleanor fectly, even in height and apparent effort to dwarf its mate, ept that Eleanor dwarfed her husband without an effort, l both in art and in history the result lacked harmony.

Be the contrast what it may, it does not affect the fact that no other church in France has two spires that need be discussed in comparison with these. Indeed, no other cathedral of the same class has any spires at all, and this superiority of Chartres gave most of its point to a saying that 'with the spires of Chartres, the choir of Beauvais, the nave of Amiens, and the façade of Rheims,' one could make a perfect church — for us tourists.

The towers have taken much time, though they are the least religious and least complicated part of church architecture, and in no way essential to the church; indeed, Saint Bernard thought them an excrescence due to pride and worldliness, and this is merely Saint Bernard's way of saying that they were an ornament created to gratify the artistic sense of beauty. Beautiful as they are, one's eyes must drop at last down to the church itself. If the spire symbolizes aspiration, the door symbolizes the way; and the portal of Chartres is the type of French doors; it stands first in the history of Gothic art; and, in the opinion of most Gothic artists, first in the interest of all art, though this is no concern of ours. Here is the Way to Eternal Life as it was seen by the Church and the Art of the first crusade!

The fortune of this monument has been the best attested Miracle de la Vierge in the long list of the Virgin's miracles, for it comes down, practically unharmed, through what may with literal accuracy be called the jaws of destruction and the flames of hell. Built some time in the first half of the twelfth century, it passed, apparently unscathed, through the great fire of 1194 which burnt out the church behind, and even the timber interior of the towers in front of it. Owing to the enormous mass of timber employed in the structure of the great churches, these recurrent fires were as destructive as fire can be made, yet not only the portals with their statuary and carving, but also the lancet windows with their glass, escaped the flames; and, what is almost equally strange, escaped also the hand of the builder afterwards, who, if he had resembled other architects, would have made a new front of his own, but who, with piety unexampled, tenderly took the old stones down, one by one, and replaced them forty feet in advance of their old position. The

glish wars and the wars of religion brought new dangers, ges, and miseries; the revolution of 1792 brought actual ine and waste; boys have flung stones at the saints; archi- ts have wreaked their taste within and without, fire after fire calcined the church vaults; the worst wrecker of all, the torer of the nineteenth century, has prowled about it; yet the ch still stands, mutilated but not restored, burned but not sumed, as eloquent a witness to the power and perfections Our Lady as it was seven hundred years ago, and perhaps re impressive.

You will see portals and porches more or less of the same iod elsewhere in many different places — at Paris, Le Mans, as, Autun, Vézelay, Clermont-Ferrand, Moissac, Arles — core of them; for the same piety has protected them more n once; but you will see no other so complete or so instruc- , and you may search far before you will find another equally d in workmanship. Study of the Chartres portal covers all rest. The feeling and motive of all are nearly the same, or y only to suit the character of the patron saint; and the nt of all is that this feeling is the architectural child of the t crusade. At Chartres one can read the first crusade in portal, as at Mont-Saint-Michel in the Aquilon and the menoir.

The Abbé Bulteau gives reason for assuming the year 1117 he approximate date of the sculpture about the west portal, l you saw at Mont-Saint-Michel, in the promenoir of Abbot ger II, an accurately dated work of the same decade; but atever the date of the plan, the actual work and its spirit ong to 1145 or thereabouts. Some fifty years had passed e the crusaders streamed through Constantinople to An- h and Jerusalem, and they were daily going and returning. u can see the ideas they brought back with the relics and sals and enamels they bought in Byzantium. Over the tral door is the Christ, which might be sculptured after Byzantine enamel, with its long nimbus or aureole or glory closing the whole figure. Over the left door is an Ascension, aring the same stamp; and over the right door, the seated

Virgin, with her crown and her two attendant archangels, is a
empress. Here is the Church, the Way, and the Life of th
twelfth century that we have undertaken to feel, if not to under
stand!

First comes the central doorway, and above it is the glory o
Christ, as the church at Chartres understood Christ in the yea
1150; for the glories of Christ were many, and the Chartre
Christ is one. Whatever Christ may have been in other churches
here, on this portal, he offers himself to his flock as the herald
of salvation alone. Among all the imagery of these three door
ways, there is no hint of fear, punishment, or damnation, and
this is the note of the whole time. Before 1200, the Church
seems not to have felt the need of appealing habitually to terror
the promise of hope and happiness was enough; even the porta
at Autun, which displays a Last Judgment, belonged to Saint
Lazarus the proof and symbol of resurrection. A hundred
years later, every church portal showed Christ not as Saviour
but as Judge, and He presided over a Last Judgment at Bourges
and Amiens, and here on the south portal, where the despair
of the damned is the evident joy of the artist, if it is not ever
sometimes a little his jest, which is worse. At Chartres Christ
is identified with His Mother, the spirit of love and grace, and
His Church is the Church Triumphant.

Not only is fear absent; there is not even a suggestion of pain;
there is not a martyr with the symbol of his martyrdom; and
what is still more striking, in the sculptured life of Christ, from
the Nativity to the Ascension, which adorns the capitals of the
columns, the single scene that has been omitted is the Crucifixion. There, as everywhere in this portal, the artists seem
actually to have gone out of their way in order to avoid a suggestion of suffering. They have pictured Christ and His Mother
in all the other events of their lives; they have represented
evangelists; apostles; the twenty-four old men of the Apocalypse;
saints, prophets, kings, queens, and princes, by the score; the
signs of the zodiac, and even the seven liberal arts: grammar,
rhetoric, dialectics, arithmetic, geometry, astronomy, and
music; everything is there except misery.

Perhaps Our Lady of Chartres was known to be peculiarly
cious and gentle, and this may partially account also for the
reme popularity of her shrine; but whatever the reason, her
urch was clearly intended to show only this side of her nature,
d to impress it on her Son. You can see it in the grave and
cious face and attitude of the Christ, raising His hand to
ss you as you enter His kingdom; in the array of long figures
ich line the entrance to greet you as you pass; in the expres-
n of majesty and mercy of the Virgin herself on her throne
ove the southern doorway; never once are you regarded as
ossible rebel, or traitor, or a stranger to be treated with
picion, or as a child to be impressed by fear.

Equally distinct, perhaps even more emphatic, is the sculptor's
nestness to make you feel, without direct insistence, that
u are entering the Court of the Queen of Heaven who is
e with her Son and His Church. The central door always
re the name of the 'Royal Door,' because it belonged to the
estial majesty of Christ, and naturally bears the stamp of
alty; but the south door belongs to the Virgin and to us.
p a moment to see how she receives us, remembering, or
ing to remember, that to the priests and artists who designed
portal, and to the generations that went on the first and
ond crusades, the Virgin in her shrine was at least as living,
eal, as personal an empress as the Basilissa at Constantinople!
On the lintel immediately above the doorway is a succession
mall groups: first, the Annunciation; Mary stands to receive
Archangel Gabriel, who comes to announce to her that she
hosen to be the Mother of God. The second is the Visitation,
l in this scene also Mary stands, but she already wears a
wn; at least, the Abbé Bulteau says so, although time has
lt harshly with it. Then, in the centre, follows the Nativity;
ry lies on a low bed, beneath, or before, a sort of table or
dle on which lies the Infant, while Saint Joseph stands at the
's head. Then the angel appears, directing three shepherds
he spot, filling the rest of the space.

n correct theology, the Virgin ought not to be represented
ed, for she could not suffer like ordinary women, but her

palace at Chartres is not much troubled by theology, and to he as empress-mother, the pain of child-birth was a pleasure whic she wanted her people to share. The Virgin of Chartres wa the greatest of all queens, but the most womanly of women, a we shall see; and her double character is sustained throughou her palace. She was also intellectually gifted in the highe degree. In the upper zone you see her again, at the Presenta tion in the Temple, supporting the Child Jesus on the alta while Simeon aids. Other figures bring offerings. The vou sures of the arch above contain six archangels, with curiou wings, offering worship to the Infant and His Imperial Mothe Below are the signs of the zodiac; the Fishes and the Twin The rest of the arch is filled by the seven liberal arts, wit Pythagoras, Aristotle, Cicero, Euclid, Nicomachus, Ptolemy and Priscian as their representatives, testifying to the Queen intellectual superiority.

In the centre sits Mary, with her crown on her head and he Son in her lap, enthroned, receiving the homage of heaven an earth; of all time, ancient and modern; of all thought, Christia and Pagan; of all men, and all women; including, if you pleas your homage and mine, which she receives without questio as her due; which she cannot be said to claim, because she above making claims; she is empress. Her left hand bore sceptre; her right supported the Child, Who looks directl forward, repeating the Mother's attitude, and raises His righ hand to bless, while His left rests on the orb of empire. She an her Child are one.

All this was noble beyond the nobility of man, but its earthl form was inspired by the Empire rather than by the pett royalty of Louis-le-Gros or his pious queen Alix of Savoy. On mark of the period is the long, oval nimbus; another is th imperial character of the Virgin; a third is her unity with th Christ which is the Church. To us, the mark that will dis tinguish the Virgin of Chartres, or, if you prefer, the Virgi of the Crusades, is her crown and robes and throne. Accordin to M. Rohault de Fleury's 'Iconographie de la Sainte Vierg (II, 62), the Virgin's headdress and ornaments had been fo

ng ages borrowed from the costume of the Empresses of the ast in honour of the Queen of Heaven. No doubt the Virgin Chartres was the Virgin recognized by the Empress Helena, other of Constantine, and was at least as old as Helena's lgrimage to Jerusalem in 326. She was not a Western, feudal een, nor was her Son a feudal king; she typified an authority nich the people wanted, and the fiefs feared; the Pax Romana; e omnipotence of God in government. In all Europe, at that ne, there was no power able to enforce justice or to maintain der, and no symbol of such a power except Christ and His other and the Imperial Crown.

This idea is very different from that which was the object of r pilgrimage to Mont-Saint-Michel; but since all Chartres to be one long comment upon it, you can lay the history of the atter on the shelf for study at your leisure, if you ever care to udy into the weary details of human illusions and disappoint-ents, while here we pray to the Virgin, and absorb ourselves the art, which is your pleasure and which shall not teach her a moral or a useful lesson. The Empress Mary is receiving u at her portal, and whether you are an impertinent child, a foolish old peasant-woman, or an insolent prince, or a more solent tourist, she receives you with the same dignity; in fact, e probably sees very little difference between you. An empress Russia today would probably feel little difference in the ative rank of her subjects, and the Virgin was empress over nperors, patriarchs, and popes. Any one, however ignorant, n feel the sustained dignity of the sculptor's work, which is serted with all the emphasis he could put into it. Not one these long figures which line the three doorways but is an icer or official in attendance on the Empress or her Son, and ars the stamp of the Imperial Court. They are mutilated, but, they have been treated with indignity, so were often their mporal rivals, torn to pieces, trampled on, to say nothing of ing merely beheaded or poisoned, in the Sacred Palace and e Hippodrome, without losing that peculiar Oriental dignity style which seems to drape the least dignified attitudes. The and air of the twelfth century is something like that of a Greek

temple; you can, if you like, hammer every separate stone to pieces, but you cannot hammer out the Greek style. There were originally twenty-four of these statues, and nineteen remain. Beginning at the north end, and passing over the first figure, which carries a head that does not belong to it, notice the second, a king with long sceptre of empire, a book of law, and robes of Byzantine official splendour. Beneath his feet is a curious woman's head with heavy braids of hair, and a crown. The third figure is a queen, charming as a woman, but particularly well-dressed, and with details of ornament and person elaborately wrought; worth drawing, if one could only draw; worth photographing with utmost care to include the strange support on which she stands: a monkey, two dragons, a dog, a basilisk with a dog's head. Two prophets follow — not so interesting; — prophets rarely interest. Then comes the central bay: two queens who claim particular attention, then a prophet, then a saint next the doorway; then on the southern jamb-shafts, another saint, a king, a queen, and another king. Last comes the southern bay, the Virgin's own, and there stands first a figure said to be a youthful king; then a strongly sculptured saint; next the door a figure called also a king, but so charmingly delicate in expression that the robes alone betray his sex; and who this exquisite young aureoled king may have been who stands so close to the Virgin, at her right hand, no one can now reveal. Opposite him is a saint who may be, or should be, the Prince of the Apostles; then a bearded king with a broken sceptre, standing on two dragons; and, at last, a badly mutilated queen.

These statues are the Eginetan marbles of French art; from them all modern French sculpture dates, or ought to date. They are singularly interesting; as naïf as the smile on the faces of the Greek warriors, but no more grotesque than they. You will see Gothic grotesques in plenty, and you cannot mistake the two intentions; the twelfth century would sooner have tempted the tortures of every feudal dungeon in Europe than have put before the Virgin's eyes any figure that could be conceived as displeasing to her. These figures are full of feeling, and saturated with worship; but what is most to our purpose is

feminine side which they proclaim and insist upon. Not
y the number of the female figures, and their beauty, but
the singularly youthful beauty of several of the males; the
erb robes they wear; the expression of their faces and their
res; the details of hair, stuffs, ornaments, jewels; the refine-
it and feminine taste of the whole, are enough to startle our
rest if we recognize what meaning they had to the twelfth
tury.

These figures looked stiff and long and thin and ridiculous
nlightened citizens of the eighteenth century, but they were
le to fit the architecture; if you want to know what an
iusiast thinks of them, listen to M. Huysmans's 'Cathedral.'
ond a doubt, the most beautiful sculpture in the world is in
place.' He can hardly find words to express his admiration
the queens, and particularly for the one on the right of the
ral doorway. 'Never in any period has a more expressive
re been thus wrought by the genius of man; it is the chef-
euvre of infantile grace and holy candour.... She is the elder
r of the Prodigal Son, the one of whom Saint Luke does not
k, but who, if she existed, would have pleaded the cause
he absent, and insisted, with the father, that he should kill
fatted calf at his son's return.' The idea is charming if you
the returning son, as many twelfth-century pilgrims must
e thought themselves; but, in truth, the figure is that of
ieen; an Eleanor of Guienne; her position there is due to her
esty, which bears witness to the celestial majesty of the
rt in which she is only a lady-in-waiting: and she is hardly
e humanly fascinating than her brother, the youthful king
ie Virgin's right hand, who has nothing of the Prodigal Son,
who certainly has much of Lohengrin, or even — almost —
tan.

he Abbé Bulteau has done his best to name these statues,
the names would be only in your way. That the sculptor
nt them for a Queen of Sheba or a King of Israel has little
o with their meaning in the twelfth century, when the people
e much more likely to have named them after the queens
kings they knew. The whole charm lies for us in the twelfth-

century humanity of Mary and her Court; not in the scriptur
names under which it was made orthodox. Here, in this weste
portal, it stands as the crusaders of 1100–50 imagined it; b
by walking round the church to the porch over the entrance
the north transept, you shall see it again as Blanche of Casti
and Saint Louis imagined it, a hundred years later, so that yo
will know better whether the earthly attributes are exaggerate
or untrue.

Porches, like steeples, were rather a peculiarity of Frenc
churches, and were studied, varied, one might even say pette
by French architects to an extent hardly attempted elsewher
but among all the French porches, those of Chartres are th
most famous. There are two: one on the north side, devote
to the Virgin; the other, on the south, devoted to the Son. 'Th
mass of intelligence, knowledge, acquaintance with effect
practical experience, expended on these two porches of Cha
tres,' says Viollet-le-Duc, 'would be enough to establish th
glory of a whole generation of artists.' We begin with the nort
porch because it belonged to the Virgin; and it belonged
the Virgin because the north was cold, bleak, sunless, windy, an
needed warmth, peace, affection, and power to protect again
the assaults of Satan and his swarming devils. There the al
suffering but the all-powerful Mother received other mothe
who suffered like her, but who, as a rule, were not powerfu
Traditionally in the primitive church, the northern porc
belonged to the women. When they needed help, they cam
here, because it was the only place in this world or in any othe
where they had much hope of finding even a reception. Se
how Mary received them!

The porch extends the whole width of the transept, about on
hundred and twenty feet (37.65 metres), divided into three bay
some twenty feet deep, and covered with a stone vaulted ro
supported on piers outside. Begun toward 1215 under Phili
Augustus, the architectural part was finished toward 1225 unde
Louis VIII; and after his death in 1226, the decorative wor
and statuary were carried on under the regency of his widow
Blanche of Castile, and through the reign of her son, Sain

iis (1235–70), until about 1275, when the work was com-
ted by Philip the Hardy. A gift of the royal family of France,
the members of the family seem to have had a share in building
and several of their statues have been supposed to adorn it.
e walls are lined — the porch, in a religious sense, is in-
ited — by more than seven hundred figures, great and
ll, all, in one way or another, devoted to the glory of the
een of Heaven. You will see that a hundred years have con-
ted the Byzantine Empress into a French Queen, as the same
rs had converted Alix of Savoy into Blanche of Castile; but
note of majesty is the same, and the assertion of power is,
ossible, more emphatic.

The highest note is struck at once, in the central bay, over
door, where you see the Coronation of Mary as Queen of
aven, a favourite subject in art from very early times, and the
minant idea of Mary's church. You see Mary on the left,
ed on her throne; on the right, seated on a precisely similar
one, is Christ, Who holds up His right hand apparently to
ss, since Mary already bears the crown. Mary bends for-
rd, with her hands raised toward her Son, as though in
titude or adoration or prayer, but certainly not in an attitude
eudal homage. On either side, an archangel swings a censer.
On the lintel below, on the left, is represented the death of
ry; on the right, Christ carries, in the folds of His mantle,
soul of Mary in the form of a little child, and at the same
e blesses the body which is carried away by angels — The
urrection of Mary.

elow the lintel, supporting it, and dividing the doorway in
ves, is the trumeau — the central pier — a new part of the
tal which was unknown to the western door. Usually in
Virgin's churches, as at Rheims, or Amiens or Paris, the
gin herself, with her Son in her arms, stands against this pier,
mpling on the dragon with the woman's head. Here, not
Virgin with the Christ, but her mother Saint Anne stands,
h the infant Virgin in her arms; while beneath is, or was,
nt Joachim, her husband, among his flocks, receiving from
Archangel Gabriel the annunciation.

So at the entrance the Virgin declares herself divinely Quee in her own right; divinely born; divinely resurrected from deat on the third day; seated by divine right on the throne of Heave at the right hand of God, the Son, with Whom she is one.

Unless we feel this assertion of divine right in the Queen Heaven, apart from the Trinity, yet one with It, Chartres unintelligible. The extreme emphasis laid upon it at the churc door shows what the church means within. Of course, th assertion was not strictly orthodox; perhaps, since we are n members of the Church, we might be unnoticed and unr buked if we start by suspecting that the worship of the Virgi never was strictly orthodox; but Chartres was hers before it ev belonged to the Church, and, like Lourdes in our own tim was a shrine peculiarly favoured by her presence. The me fact that it was a bishopric had little share in its sanctity. Th bishop was much more afraid of Mary than he was of an Church Council ever held.

Critics are doing their best to destroy the peculiar persona interest of this porch, but tourists and pilgrims may be excuse for insisting on their traditional rights here, since the porch singular, even in the thirteenth century, for belonging entirel to them and the royal family of France, subject only to th Virgin. True artists, turned critics, think also less of rules tha of values, and no ignorant public can be trusted to join th critics in losing temper judiciously over the date or correctne of a portrait until they knew something of its motives and merit The public has always felt certain that some of the statues whic stand against the outer piers of this porch are portraits, and the see no force in the objection that such decoration was no customary in the Church. Many things at Chartres were no customary in the Church, although the Church now prefer not to dwell on them. Therefore the student returns to Viollet le-Duc with his usual delight at finding at least one critic whos sense of values is stronger than his sense of rule: 'Each statue, he says in his 'Dictionary' (III, 166), 'possesses its persona character which remains graven on the memory like the recollec tion of a living being whom one has known.... A large par

ıe statues in the porches of Notre Dame de Chartres, as well
f the portals of the Cathedrals of Amiens and Rheims, possess
e individual qualities, and this it is which explains why
e statues produce on the crowd so vivid an impression that
ames them, knows them, and attaches to each of them an
, often a legend.'

robably the crowd did so from the first moment they saw the
ıes, and with good reason. At all events, they have attached
wo of the most individual figures on the north porch, two
ıes, perhaps the best known in France in the year 1226, but
ch since the year 1300 can have conveyed only the most
lowy meaning to any but pure antiquarians. The group is
eautiful as to be given a plate to itself in the 'Monographie'
mber 26), as representing Philip Hurepel and his wife
ıaut de Boulogne. So little could any crowd, or even any
quarian, at any time within six hundred years have been
y to pitch on just these persons to associate with Blanche of
ile in any kind of family unity, that the mere suggestion
ıs wild; yet Blanche outlived Pierre by nearly twenty years,
her power over this transept and porch ended only with her
h as regent in 1252.

ıilippe, nicknamed Hurepel — Boarskin — was a 'fils de
ıce,' whose father, Philip Augustus, had serious, not to say
, difficulties with the Church about the legality of his
riage, and was forced to abandon his wife, who died in 1201,
giving birth to Hurepel in 1200. The child was recognized
egitimate, and stood next to the throne, after his half-
her Louis, who was thirteen years older. Almost at his
ı he was affianced to Mahaut, Countess of Boulogne, and
marriage was celebrated in 1216. Rich and strongly con-
ed, Hurepel naturally thought himself — and was — head
e royal family next to the King, and when his half-brother,
s VIII, died in 1226, leaving only a son, afterwards Saint
s, a ten-year-old boy, to succeed, Hurepel very properly
ned the guardianship of his infant nephew, and deeply
ıted being excluded by Queen Blanche from what he
rded — perhaps with justice — as his right. Nearly all the

8 8 0 2

great lords and the members of the royal family sided with him and entered into a civil war against Blanche, at the moment when these two porches of Chartres were building, between 1228 and 1230. The two greatest leaders of the conspiracy were Hurepel, whom we are expected to recognize on the pier of the porch, and Pierre Mauclerc, of Brittany and Dreux, whom we have no choice but to admit on the trumeau of the other. In those days every great feudal lord was more or less related by blood to the Crown, and although Blanche of Castile was also a cousin as well as queen-mother, they hated her as a Spanish intruder with such hatred as men felt in an age when passions were real.

That these two men should be found here, associated with Blanche in the same work, at the same time, under the same roof, is a fantastic idea, and students can feel in this political difficulty a much stronger objection to admitting Hurepel to Queen Blanche's porch than any supposed rule of Church custom; yet the first privilege of tourist ignorance is the right to see, or try to see, their thirteenth century with thirteenth century eyes. Passing by the statues of Philip and Mahaut, and stepping inside the church door, almost the first figure that the visitor sees on lifting his eyes to the upper windows of the transept is another figure of Philippe Hurepel, in glass, on his knees, with clasped hands, before an altar; and to prevent possibility of mistake his blazoned coat bears the words: 'Philippe Conte de Bolone.' Apparently he is the donor, for, in the rose above, he sits in arms on a white horse with a shield bearing the blazon of France. Obliged to make his peace with the Queen in 1230, Hurepel died in 1233 or 1234, while Blanche was still regent, and instantly took his place as of right side by side with Blanche's castles of Castile among the great benefactors of the church.

Beneath the next rose is Mahaut herself, as donor, bearing her husband's arms of France, suggesting that the windows must have been given together, probably before Philip's death in 1233, since Mahaut was married again in 1238, this time to Alfonso of Portugal, who repudiated her in 1249, and left her to

n her own town of Boulogne in 1258. Lastly, in the third low of the series, is her daughter Jeanne — 'Iehenne' — was probably born before 1220, and who was married 236 to Gaucher de Chatillon, one of the greatest warriors is time. Jeanne also — according to the Abbé Bulteau , 225) — bears the arms of her father and mother; which is to suggest that she gave this window before her marriage. e three windows, therefore, have the air of dating at least rly as 1233 when Philip Hurepel died, while next them w two more roses, and the great rose of France, presumably e same date, all scattered over with the castles of Queen che. The motive of the porch outside is repeated in the , as it should be, and as the Saint Anne of the Rose of ce, within, repeats the Saint Anne on the trumeau of the l. The personal stamp of the royal family is intense, but tamp of the Virgin's personality is intenser still. In the nce of Mary, not only did princes hide their quarrels, but also put on their most courteous manners and the most ed and even austere address. The Byzantine display of ry and adornment had vanished. All the figures suggest anctity of the King and his sister Isabel; the court has the f a convent; but the idea of Mary's majesty is asserted igh it all. The artists and donors and priests forgot nothing h, in their judgment, could set off the authority, elegance, refinement of the Queen of Heaven; even the young ladies-iiting are there, figured by the twelve Virtues and the een Beatitudes; and, indeed, though men are plenty and of them are handsome, women give the tone, the charm, mostly the intelligence. The Court of Mary is feminine, its charms are Grace and Love; perhaps even more grace love, in a social sense, if you look at Beauty and Friend-among Beatitudes.

Huysmans insists that this sculpture is poor in comparison his twelfth-century Prodigal Daughter, and I hope you nter into the spirit of his enthusiasm; but other people r the thirteenth-century work and think it equals the best k. Approaching, or surpassing this — as you like — is the

sculpture you will see at Rheims, of the same period, and pe
haps the same hands; but, for our purpose, the Queen of Sheb
here in the right-hand bay, is enough, because you can con
pare it on the spot with M. Huysmans's figure on the weste
portal, which may also be a Queen of Sheba, who, as spouse
Solomon, typified the Church, and therefore prefigured Ma
herself. Both are types of Court beauty and grace, one fro
the twelfth century, the other from the thirteenth, and you ca
prefer which you please; but you want to bear in mind that eac
in her time, pleased the Virgin. You can even take for a settle
fact that these were the types of feminine beauty and gra
which pleased the Virgin beyond all others.

The purity of taste, feeling, and manners which stamps th
art of these centuries, as it did the Court of Saint Louis and h
mother, is something you will not wholly appreciate till yo
reach the depravity of the Valois; but still you can see how e
quisite the Virgin's taste was, and how pure. You can also se
how she shrank from the sight of pain. Here, in the central ba
next to King David, who stands at her right hand, is the gre
figure of Abraham about to sacrifice Isaac. If there is one sub
ject more revolting than another to a woman who typifies th
Mother, it is this subject of Abraham and Isaac, with its com
pound horror of masculine stupidity and brutality. The sculpto
has tried to make even this motive a pleasing one. He ha
placed Abraham against the column in the correct harshne
of attitude, with his face turned aside and up, listening for di
orders; but the little Isaac, with hands and feet tied, leans lik
a bundle of sticks against his father's knee with an expressio
of perfect faith and confidence, while Abraham's left hand quie
him and caresses the boy's face, with a movement that mus
have gone straight to Mary's heart, for Isaac always prefigure
Christ.

The glory of Mary was not one of terror, and her porch con
tains no appeal to any emotion but those of her perfect grace
If we were to stay here for weeks, we should find only this ide
worked into every detail. The Virgin of the thirteenth centur
is no longer an Empress; she is Queen Mother — an idealized

nche of Castile; — too high to want, or suffer, or to revenge, o aspire, but not too high to pity, to punish, or to pardon. e women went to her porch for help as naturally as babies heir mother; and the men, in her presence, fell on their es because they feared her intelligence and her anger.

Not that all the men showed equal docility! We must go t, round the church, to the south porch, which was the gift Pierre Mauclerc, Comte de Dreux, another member of the al family, great-grandson of Louis VI, and therefore second sin to Louis VIII and Philip Hurepel. Philip Augustus, his er's first cousin, married the young man, in 1212, to Alix, ess of the Duchy of Brittany, and this marriage made him of the most powerful vassals of the Crown. He joined Philip repel in resisting the regency of Queen Blanche in 1227, and nche, after a long struggle, caused him to be deposed in 1230. re was obliged to submit, and was pardoned. Until 1236, remained in control of the Duchy of Brittany, but then was ged to surrender his power to his son, and turned his oulent activity against the infidels in Syria and Egypt, dying 1250, on his return from Saint Louis's disastrous crusade. re de Dreux was a masculine character — a bad cleric, as nickname Mauclerc testified, but a gentleman, a soldier, and holar, and, what is more to our purpose, a man of taste. built the south porch at Chartres, apparently as a memorial is marriage with Alix in 1212, and the statuary is of the e date with that of the north porch, but, like that, it was not shed when Pierre died in 1250.

One would like to know whether Pierre preferred to take the thern entrance, or whether he was driven there by the royal m to the Virgin's favour. The southern porch belongs to the , as the northern belongs to the Mother. Pierre never showed ch deference to women, and probably felt more at his ease ler the protection of the Son than of Mary; but in any case showed as clearly as possible what he thought on this ques- of persons. To Pierre, Christ was first, and he asserted his nion as emphatically as Blanche asserted hers.

Which porch is the more beautiful is a question for artists to

discuss and decide, if they can. Either is good enough for u whose pose is ignorance, and whose pose is strictly correct; bu apart from its beauty or its art, there is also the question o feeling, of motive, which puts the Porche de Dreux in contra with the Porche de France, and this is wholly within our com petence. At the outset, the central bay displays, above th doorway, Christ, on a throne, raising His hands to show th *stigmata*, the wounds which were the proof of man's salvatio At His right hand sits the Mother — without her crown; o His left, in equal rank with the Mother, sits Saint John th Evangelist. Both are in the same attitude of supplication a intercessors; there is no distinction in rank or power betwee Mary and John, since neither has any power except what Chri gives them. Pierre did not, indeed, put the Mother on her knee before the Son, as you can see her at Amiens and in late churches — certainly bad taste in Mary's own place; but h allowed her no distinction which is not her strict right. Th angels above and around bear the symbols of the Passion; the are unconscious of Mary's presence; they are absorbed in th perfections of the Son. On the lintel just below is the La Judgment, where Saint Michael reappears, weighing the sou of the dead which Mary and John above are trying to sav from the strict justice of Christ. The whole melodrama o Church terrors appears after the manner of the thirteent century, on this church door, without regard to Mary's feeling and below, against the trumeau, stands the great figure o Christ — the whole Church — trampling on the lion an dragon. On either side of the doorway stand six great figur of the Apostles asserting themselves as the columns of th Church, and looking down at us with an expression no longe calculated to calm our fears or encourage extravagant hope No figure on this porch suggests a portrait or recalls a memor

Very grand, indeed, is this doorway; dignified, impressive and masculine to a degree seldom if ever equalled in art; an the left bay rivals it. There, in the tympanum, Christ appea again; standing; bearing on His head the crown royal; alon except for the two angels who adore, and surrounded only b

nartyrs, His witnesses. The right bay is devoted to Saint olas and the Saints Confessors who bear witness to the ority of Christ in faith. Of the twenty-eight great figures, fficers of the royal court, who make thus the strength of Church beneath Christ, not one is a woman. The masculine doxy of Pierre Mauclerc has spared neither sex nor youth; re of a maturity which chills the blood, excepting two, e youthful beauty is heightened by the severity of their undings, so that the Abbé Bulteau makes bold even to say 'the two statues of Saint George and Saint Theodore may egarded as the most beautiful of our cathedral, perhaps as the two masterpieces of statuary at the end of the eenth century.' On that point, let every one follow his ; but one reflection at least seems to force itself on the mind mparing these twenty-eight figures. Certainly the sword, ever it may compare with the pen in other directions, is in more powerful than all the pens, or volumes, or crosiers made. Your 'Golden Legend' and Roman Breviary are the only guide-books worth consulting, and the stories of g George and Theodore stand there recorded; as their cle under the walls of Antioch, during the first crusade, is er of history; but among these magnificent figures one cts at a glance that it is not the religion or sacred purity of ubject, or even the miracles or the sufferings, which inspire on for Saint George and Saint Theodore, under the Abbé's ; it is with him, as with the plain boy and girl, simply h, with lance and sword and shield.

ese two figures stand in the outer embrasures of the left where they can be best admired, and perhaps this arrange- shows what Perron de Dreux, as he was commonly d, loved most, in his heart of hearts; but elsewhere, even is porch, he relaxed his severity, and became at times al- gracious to women. Good judges have, indeed, preferred porch to the northern one; but, be that as you please, it ains seven hundred and eighty-three figures, large and l, to serve for comparison. Among these, the female element ts share, though not a conspicuous one; and even the Virgin

gets her rights, though not beside her Son. To see her, yo must stand outside in the square and, with a glass, look at th central pignon, or gable, of the porch. There, just above th point of the arch, you will see Mary on her throne, crowne wearing her royal robes, and holding the Child on her knee with the two archangels on either side offering incense. Pier de Dreux, or some one else, admitted at last that she was Quee Regent, although evidently not eager to do so; and if you tur your glass up to the gable of the transept itself, above the gre rose and the colonnade over it, you can see another and colossal statue of the Virgin, but standing, with the Child o her left arm. She seems to be crowned, and to hold the glob in her right hand; but the Abbé Bulteau says it is a flower. Th two archangels are still there. This figure is thought to hav been a part of the finishing decoration added by Philip th Fair in 1304.

In theology, Pierre de Dreux seems to show himself a mo learned clerk than his cousins of France, and, as an expressio of the meaning the church of Mary should externally displa the Porche de Dreux, if not as personal, is as energetic as th Porche de France, or the western portal. As we pass into th Cathedral, under the great Christ, on the trumeau, you mu stop to look at Pierre himself. A bridegroom, crowned wi flowers on his wedding-day, he kneels in prayer, while tw servants distribute bread to the poor. Below, you see him agai seated with his wife Alix before a table with one loaf, assistin at the meal they give to the poor. Pierre kneels to God; he an his wife bow before the Virgin and the poor; — but not Queen Blanche!

Now let us enter!

VI. The Virgin of Chartres

WE MUST take ten minutes to accustom our eyes to the light, and we had better use them to seek the reason why we come to Chartres rather than to ims or Amiens or Bourges, for the cathedral that fills our l. The truth is, there are several reasons; there generally for doing the things we like; and after you have studied rtres to the ground, and got your reasons settled, you will r find an antiquarian to agree with you; the architects will bably listen to you with contempt; and even these excellent sts, whose kindness is great, whose patience is heavenly, and se good opinion you would so gladly gain, will turn from with pain, if not with horror. The Gothic is singular in this; seems easily at home in the Renaissance; one is not too nge in the Byzantine; as for the Roman, it is ourselves; and could walk blindfolded through every chink and cranny of Greek mind; all these styles seem modern, when we come e to them; but the Gothic gets away. No two men think e about it, and no woman agrees with either man. The rch itself never agreed about it, and the architects agree less than the priests. To most minds it casts too many lows; it wraps itself in mystery; and when people talk of tery, they commonly mean fear. To others, the Gothic is hoary with age and decrepitude, and its shadows mean h. What is curious to watch is the fanatical conviction of Gothic enthusiast, to whom the twelfth century means

exuberant youth, the eternal child of Wordsworth, over who its immortality broods like the day; it is so simple and yet complicated; it sees so much and so little; it loves so many to and cares for so few necessities; its youth is so young, its age old, and its youthful yearning for old thought is so disconcertin like the mysterious senility of the baby that

> Deaf and silent, reads the eternal deep
> Haunted forever by the eternal mind.

One need not take it more seriously than one takes the ba itself. Our amusement is to play with it, and to catch its mea ing in its smile; and whatever Chartres may be now, wh young it was a smile. To the Church, no doubt, its cathedr here has a fixed and administrative meaning, which is the sa as that of every other bishop's seat and with which we ha nothing whatever to do. To us, it is a child's fancy; a to house to please the Queen of Heaven — to please her so mu that she would be happy in it — to charm her till she smiled

The Queen Mother was as majestic as you like; she w absolute; she could be stern; she was not above being angry; b she was still a woman, who loved grace, beauty, ornament her toilette, robes, jewels; — who considered the arrangemen of her palace with attention, and liked both light and colou who kept a keen eye on her Court, and exacted prompt a willing obedience from king and archbishops as well as fro beggars and drunken priests. She protected her friends a punished her enemies. She required space, beyond what w known in the Courts of kings, because she was liable at times to have ten thousand people begging her for favours mostly inconsistent with law — and deaf to refusal. She w extremely sensitive to neglect, to disagreeable impressions, want of intelligence in her surroundings. She was the greate artist, as she was the greatest philosopher and musician a theologist, that ever lived on earth, except her Son, Who, Chartres, is still an Infant under her guardianship. Her ta was infallible; her sentence eternally final. This church w built for her in this spirit of simple-minded, practical, utilitari

th — in this singleness of thought, exactly as a little girl sets a doll-house for her favourite blonde doll. Unless you can back to your dolls, you are out of place here. If you can go ck to them, and get rid for one small hour of the weight of stom, you shall see Chartres in glory.

The palaces of earthly queens were hovels compared with se palaces of the Queen of Heaven at Chartres, Paris, Laon, yon, Rheims, Amiens, Rouen, Bayeux, Coutances — a list t might be stretched into a volume. The nearest approach have made to a palace was the Merveille at Mont-Saint-chel, but no Queen had a palace equal to that. The Merveille s built, or designed, about the year 1200; toward the year oo, Louis XI built a great castle at Loches in Touraine, and re Queen Anne de Bretagne had apartments which still exist, d which we will visit. At Blois you shall see the residence ich served for Catherine de Medicis till her death in 1589. ne de Bretagne was trebly queen, and Catherine de Medicis k her standard of comfort from the luxury of Florence. At rsailles you can see the apartments which the queens of the urbon line occupied through their century of magnificence. put together, and then trebled in importance, could not al the splendour of any single cathedral dedicated to Queen ry in the thirteenth century; and of them all, Chartres was lt to be peculiarly and exceptionally her delight.

One has grown so used to this sort of loose comparison, this kless waste of words, that one no longer adopts an idea unless s driven in with hammers of statistics and columns of figures. th the irritating demand for literal exactness and perfectly ight lines which lights up every truly American eye, you will tainly ask when this exaltation of Mary began, and unless get the dates, you will doubt the facts. It is your own fault hey are tiresome; you might easily read them all in the nographie de la Sainte Vierge,' by M. Rohault de Fleury, olished in 1878. You can start at Byzantium with the press Helena in 326, or with the Council of Ephesus in 431. u will find the Virgin acting as the patron saint of Con-ntinople and of the Imperial residence, under as many names

as Artemis or Aphrodite had borne. As Godmother (Θεομητηρ), Deipara (Θεοτοκος), Pathfinder ('Οδηγητρια), she was the chief favourite of the Eastern Empire, and her picture was carried at the head of every procession and hung on the wall of every hut and hovel, as it is still wherever the Greek Church goes. In the year 610, when Heraclius sailed from Carthage to dethrone Phocas at Constantinople, his ships carried the image of the Virgin at their mastheads. In 1143, just before the flèche on the Chartres clocher was begun, the Basileus John Comnenus died, and so devoted was he to the Virgin that, on a triumphal entry into Constantinople, he put the image of the Mother of God in his chariot, while he himself walked. In the Western Church the Virgin had always been highly honoured, but it was not until the crusades that she began to overshadow the Trinity itself. Then her miracles became more frequent and her shrines more frequented, so that Chartres, soon after 1100, was rich enough to build its western portal with Byzantine splendour. A proof of the new outburst can be read in the story of Citeaux. For us, Citeaux means Saint Bernard, who joined the Order in 1112, and in 1115 founded his Abbey of Clairvaux in the territory of Troyes. In him, the religious emotion of the half-century between the first and second crusades (1095–1145) centred as in no one else. He was a French precursor of Saint Francis of Assisi who lived a century later. If we were to plunge into the story of Citeaux and Saint Bernard we should never escape, for Saint Bernard incarnates what we are trying to understand, and his mind is further from us than the architecture. You would lose hold of everything actual, if you could comprehend in its contradictions the strange mixture of passion and caution, the austerity, the self-abandonment, the vehemence, the restraint, the love, the hate, the miracles, and the scepticism of Saint Bernard. The Cistercian Order, which was founded in 1098, from the first put all its churches under the special protection of the Virgin, and Saint Bernard in his time was regarded as the apple of the Virgin's eye. Tradition as old as the twelfth century, which long afterwards gave to Murillo the subject of a famous painting, told that once, when

was reciting before her statue the 'Ave Maris Stella,' and me to the words, 'Monstra te esse Matrem,' the image, pressg its breast, dropped on the lips of her servant three drops of e milk which had nourished the Saviour. The same miracle, various forms, was told of many other persons, both saints d sinners; but it made so much impression on the mind of the e that, in the fourteenth century, Dante, seeking in Paradise some official introduction to the foot of the Throne, found intercessor with the Queen of Heaven more potent than int Bernard. You can still read Bernard's hymns to the rgin, and even his sermons, if you like. To him she was the eat mediator. In the eyes of a culpable humanity, Christ was o sublime, too terrible, too just, but not even the weakest man frailty could fear to approach his Mother. Her attribute as humility; her love and pity were infinite. 'Let him deny ur mercy who can say that he has ever asked it in vain.'

Saint Bernard was emotional and to a certain degree mystical, e Adam de Saint-Victor, whose hymns were equally famous, t the emotional saints and mystical poets were not by any eans allowed to establish exclusive rights to the Virgin's vour. Abélard was as devoted as they were, and wrote hymns well. Philosophy claimed her, and Albert the Great, the ad of scholasticism, the teacher of Thomas Aquinas, decided her favour the question: 'Whether the Blessed Virgin possessed rfectly the seven liberal arts.' The Church at Chartres had cided it a hundred years before by putting the seven liberal ts next her throne, with Aristotle himself to witness; but bertus gave the reason: 'I hold that she did, for it is written, Wisdom has built herself a house, and has sculptured seven lumns." That house is the blessed Virgin; the seven columns e the seven liberal arts. Mary, therefore, had perfect mastery science.' Naturally she had also perfect mastery of economics, d most of her great churches were built in economic centres. he guilds were, if possible, more devoted to her than the onks; the bourgeoisie of Paris, Rouen, Amiens, Laon, spent oney by millions to gain her favour. Most surprising of all, e great military class was perhaps the most vociferous. Of

all inappropriate haunts for the gentle, courteous, pitying Mary, a field of battle seems to be the worst, if not distinctly blasphemous; yet the greatest French warriors insisted on her leading them into battle, and in the actual mêlée when men were killing each other, on every battle-field in Europe, for at least five hundred years, Mary was present, leading both sides. The battle-cry of the famous Constable du Guesclin was 'Notre-Dame-Guesclin'; 'Notre-Dame-Coucy' was the cry of the great Sires de Coucy; 'Notre-Dame-Auxerre'; 'Notre-Dame-Sancerre'; 'Notre-Dame-Hainault'; 'Notre-Dame-Gueldres'; 'Notre-Dame-Bourbon'; 'Notre-Dame-Bearn'; — all well-known battle-cries. The King's own battle at one time cried, 'Notre-Dame-Saint-Denis-Montjoie'; the Dukes of Burgundy cried, 'Notre-Dame-Bourgogne'; and even the soldiers of the Pope were said to cry, 'Notre-Dame-Saint-Pierre.'

The measure of this devotion, which proves to any religious American mind, beyond possible cavil, its serious and practical reality, is the money it cost. According to statistics, in the single century between 1170 and 1270, the French built eighty cathedrals and nearly five hundred churches of the cathedral class, which would have cost, according to an estimate made in 1840, more than five thousand millions to replace. Five thousand million francs is a thousand million dollars, and this covered only the great churches of a single century. The same scale of expenditure had been going on since the year 1000, and almost every parish in France had rebuilt its church in stone; to this day France is strewn with the ruins of this architecture, and yet the still preserved churches of the eleventh and twelfth centuries, among the churches that belong to the Romanesque and Transition period, are numbered by hundreds until they reach well into the thousands. The share of this capital which was — if one may use a commercial figure — invested in the Virgin cannot be fixed, any more than the total sum given to religious objects between 1000 and 1300; but in a spiritual and artistic sense, it was almost the whole, and expressed an intensity of conviction never again reached by any passion, whether of religion, of loyalty, of patriotism, or of wealth;

rhaps never even parallelled by any single economic effort cept in war. Nearly every great church of the twelfth and rteenth centuries belonged to Mary, until in France one asks the church of Notre Dame as though it meant cathedral; t, not satisfied with this, she contracted the habit of requiring all churches a chapel of her own, called in English the 'Lady apel,' which was apt to be as large as the church but was ways meant to be handsomer; and there, behind the high ar, in her own private apartment, Mary sat, receiving her numerable suppliants, and ready at any moment to step up on the high altar itself to support the tottering authority of e local saint.

Expenditure like this rests invariably on an economic idea. st as the French of the nineteenth century invested their rplus capital in a railway system in the belief that they would ake money by it in this life, in the thirteenth they trusted eir money to the Queen of Heaven because of their belief her power to repay it with interest in the life to come. The vestment was based on the power of Mary as Queen rather an on any orthodox Church conception of the Virgin's gitimate station. Papal Rome never greatly loved Byzantine mpresses or French queens. The Virgin of Chartres was never holly sympathetic to the Roman Curia. To this day the urch writers — like the Abbé Bulteau or M. Rohault de eury — are singularly shy of the true Virgin of majesty, ether at Chartres or at Byzantium or wherever she is seen. e fathers Martin and Cahier at Bourges alone felt her true lue. Had the Church controlled her, the Virgin would perps have remained prostrate at the foot of the Cross. Dragged a Byzantine Court, backed by popular insistence and imlled by overpowering self-interest, the Church accepted the rgin throned and crowned, seated by Christ, the Judge roned and crowned; but even this did not wholly satisfy the ench of the thirteenth century who seemed bent on absorbing rist in His Mother, and making the Mother the Church, and rist the Symbol.

The Church had crowned and enthroned her almost from

the beginning, and could not have dethroned her if it would. In all Christian art — sculpture or mosaic, painting or poetry — the Virgin's rank was expressly asserted. Saint Bernard, like John Comnenus, and probably at the same time (1120–40), chanted hymns to the Virgin as Queen:

O salutaris Virgo Stella Maris
Generans prolem, Aequitatis solem,
Lucis auctorem, Retinens pudorem,
Suscipe laudem!

Celi Regina Per quam medicina
Datur aegrotis, Gratia devotis,

Gaudium moestis, Mundo lux coelestis,

Spesque salutis;

Aula regalis, Virgo specialis,
Posce medelam Nobis et tutelam,
Suscipe vota, Precibusque cuncta
Pelle molesta!

O saviour Virgin, Star of Sea,
Who bore for child the Son of Justice.
The source of Light, Virgin always
Hear our praise!

Queen of Heaven who have given
Medicine to the sick, Grace to the devout,
Joy to the sad, Heaven's light to the world
And hope of salvation;

Court royal, Virgin typical,
Grant us cure and guard,
Accept our vows, and by prayers
Drive all griefs away!

As the lyrical poet of the twelfth century, Adam de Saint-Victor seems to have held rank higher if possible than that of Saint Bernard, and his hymns on the Virgin are certainly quite as emphatic an assertion of her majesty:

Imperatix supernorum!
Superatrix infernorum!
Eligenda via coeli,
Retinenda spe fideli,
Separatos a te longe
Revocatos ad te junge
Tuorum collegio!

Empress of the highest,
Mistress over the lowest,
Chosen path of Heaven,
Held fast by faithful hope,
Those separated from you far,
Recalled to you, unite
In your fold!

To delight in the childish jingle of the mediaeval Latin is a sign of a futile mind, no doubt, and I beg pardon of you and of the Church for wasting your precious summer day on poetry which was regarded as mystical in its age and which now sounds like a nursery rhyme; but a verse or two of Adam's hymn on the Assumption of the Virgin completes the record of her rank,

d goes to complete also the documentary proof of her majesty Chartres:

ve, Mater Salvatoris!	Mother of our Saviour, hail!
s electum! Vas honoris!	Chosen vessel! Sacred Grail!
Vas coelestis Gratiae!	Font of celestial grace!
aeterno Vas provisum!	From eternity forethought!
s insigne! Vas excisum	By the hand of Wisdom wrought!
Manu sapientiae!	Precious, faultless Vase!
ve, Mater pietatis,	Hail, Mother of Divinity!
totius Trinitatis	Hail, Temple of the Trinity!
Nobile Triclinium!	Home of the Triune God!
rbi tamen incarnati	In whom the Incarnate Word had birth,
ciale majestati	The King! to whom you gave on earth
Praeparans hospitium!	Imperial abode.
Maria! Stella maris!	Oh, Maria! Constellation!
nitate singularis,	Inspiration! Elevation!
per omnes ordinaris	Rule and Law and Ordination
Ordines coelestium!	Of the angels' host!
supermo sita poli	Highest height of God's Creation,
commenda tuae proli,	Pray your Son's commiseration,
terrores sive doli	Lest, by fear or fraud, salvation
Nos supplantent hostium!	For our souls be lost!

Constantly — one might better say at once, officially, she s addressed in these terms of supreme majesty: 'Imperatrix pernorum!' 'Coeli Regina!' 'Aula regalis!' but the twelfth ntury seemed determined to carry the idea out to its logical nclusion in defiance of dogma. Not only was the Son absorbed the Mother, or represented as under her guardianship, but e Father fared no better, and the Holy Ghost followed. The ets regarded the Virgin as the 'Templum Trinitatis'; 'totius initatis nobile Triclinium.' She was the refectory of the inity — the 'Triclinium' — because the refectory was the gest room and contained the whole of the members, and s divided in three parts by two rows of columns. She was the emplum Trinitatis,' the Church itself, with its triple aisle. e Trinity was absorbed in her.

This is a delicate subject in the Church, and you must feel with delicacy, without brutally insisting on its necessary ntradictions. All theology and all philosophy are full of

contradictions quite as flagrant and far less sympathetic. This particular variety of religious faith is simply human, and has made its appearance in one form or another in nearly all religions; but though the twelfth century carried it to an extreme, and at Chartres you see it in its most charming expression, we have got always to make allowances for what was going on beneath the surface in men's minds, consciously or unconsciously, and for the latent scepticism which lurks behind all faith. The Church itself never quite accepted the full claims of what was called Mariolatry. One may be sure, too, that the bourgeois capitalist and the student of the schools, each from his own point of view, watched the Virgin with anxious interest. The bourgeois had put an enormous share of his capital into what was in fact an economical speculation, not unlike the South Sea Scheme, or the railway system of our own time; except that in one case the energy was devoted to shortening the road to Heaven; in the other, to shortening the road to Paris; but no serious schoolman could have felt entirely convinced that God would enter into a business partnership with man, to establish a sort of joint-stock society for altering the operation of divine and universal laws. The bourgeois cared little for the philosophical doubt if the economical result proved to be good, but he watched this result with his usual practical sagacity, and required an experience of only about three generations (1200–1300) to satisfy himself that relics were not certain in their effects; that the Saints were not always able or willing to help; that Mary herself could not certainly be bought or bribed; that prayer without money seemed to be quite as efficacious as prayer with money; and that neither the road to Heaven nor Heaven itself had been made surer or brought nearer by an investment of capital which amounted to the best part of the wealth of France. Economically speaking, he became satisfied that his enormous money-investment had proved to be an almost total loss, and the reaction on his mind was as violent as the emotion. For three hundred years it prostrated France. The efforts of the bourgeoisie and the peasantry to recover their property, so far as it was recoverable, have lasted to the present

and we had best take care not to get mixed in those passions. f you are to get the full enjoyment of Chartres, you must, for time, believe in Mary as Bernard and Adam did, and feel presence as the architects did, in every stone they placed, every touch they chiselled. You must try first to rid your d of the traditional idea that the Gothic is an intentional ression of religious gloom. The necessity for light was the ive of the Gothic architects. They needed light and always e light, until they sacrificed safety and common sense in ng to get it. They converted their walls into windows, ed their vaults, diminished their piers, until their churches ld no longer stand. You will see the limits at Beauvais; at rtres we have not got so far, but even here, in places where Virgin wanted it — as above the high altar — the architect taken all the light there was to take. For the same reason, stration became the most important part of the Gothic itect's work, and at Chartres was uncommonly interesting ause the architect was obliged to design a new system, which uld at the same time satisfy the laws of construction and the e and imagination of Mary. No doubt the first command of Queen of Heaven was for light, but the second, at least ally imperative, was for colour. Any earthly queen, even ugh she were not Byzantine in taste, loved colour; and the st of queens — the only true Queen of Queens — had richer finer taste in colour than the queens of fifty earthly king- ns, as you will see when we come to the immense effort to ify her in the glass of her windows. Illusion for illusion — nting for the moment that Mary was an illusion — the gin Mother in this instance repaid to her worshippers a ger return for their money than the capitalist has ever been e to get, at least in this world, from any other illusion of lth which he has tried to make a source of pleasure and fit.

The next point on which Mary evidently insisted was the angement for her private apartments, the apse, as distin- shed from her throne-room, the choir; both being quite inct from the hall, or reception-room of the public, which

was the nave with its enlargements in the transepts. This arrangement marks the distinction between churches built as shrines for the deity and churches built as halls of worship for the public. The difference is chiefly in the apse, and the apse of Chartres is the most interesting of all apses from this point of view.

The Virgin required chiefly these three things, or, if you like these four: space, light, convenience; and colour decoration to unite and harmonize the whole. This concerns the interior; on the exterior she required statuary, and the only complete system of decorative sculpture that existed seems to belong to her churches: Paris, Rheims, Amiens, and Chartres. Mary required all this magnificence at Chartres for herself alone, not for the public. As far as one can see into the spirit of the builders, Chartres was exclusively intended for the Virgin, as the Temple of Abydos was intended for Osiris. The wants of man, beyond a mere roof-cover, and perhaps space to some degree, enter to no very great extent into the problem of Chartres. Man came to render homage or to ask favours. The Queen received him in her palace, where she alone was at home, and alone gave commands.

The artist's second thought was to exclude from his work everything that could displease Mary; and since Mary differed from living queens only in infinitely greater majesty and refinement, the artist could admit only what pleased the actual taste of the great ladies who dictated taste at the Courts of France and England, which surrounded the little Court of the Counts of Chartres. What they were — these women of the twelfth and thirteenth centuries — we shall have to see or seek in other directions; but Chartres is perhaps the most magnificent and permanent monument they left of their taste, and we can begin here with learning certain things which they were not.

In the first place, they were not in the least vague, dreamy, or mystical in a modern sense; — far from it! They seemed anxious only to throw the mysteries into a blaze of light; not so much physical, perhaps — since they, like all women, liked moderate shadow for their toilettes — but luminous in the

e of faith. There is nothing about Chartres that you would ık mystical, who know your Lohengrin, Siegfried, and sifal. If you care to make a study of the whole literature of subject, read M. Mâle's 'Art Religieux du XIII^e Siècle France,' and use it for a guide-book. Here you need only e how symbolic and how simple the sculpture is, on the tals and porches. Even what seems a grotesque or an abstract ı is no more than the simplest child's personification. On walls you may have noticed the *Ane qui vielle* — the ass ying the lyre; and on all the old churches you can see tiaries,' as they were called, of fabulous animals, symbolic ıot; but the symbolism is as simple as the realism of the oxen Laon. It gave play to the artist in his effort for variety of oration, and it amused the people — probably the Virgin was not above being amused; — now and then it seems ut to suggest what you would call an esoteric meaning, that o say, a meaning which each one of us can consider private perty reserved for our own amusement, and from which the olic is excluded; yet, in truth, in the Virgin's churches the olic is never excluded, but invited. The Virgin even had the itional charm to the public that she was popularly supposed ıave no very marked fancy for priests as such; she was ueen, a woman, and a mother, functions, all, which priests ld not perform. Accordingly, she seems to have had little e for mysteries of any sort, and even the symbols that seem st mysterious were clear to every old peasant-woman in her rch. The most pleasing and promising of them all is the nan's figure you saw on the front of the cathedral in Paris; eyes bandaged; her head bent down; her crown falling; ıout cloak or royal robe; holding in her hand a guidon or ner with its staff broken in more than one place. On the osite pier stands another woman, with royal mantle, erect commanding. The symbol is so graceful that one is quite er to know its meaning; but every child in the Middle Ages ld have instantly told you that the woman with the falling vn meant only the Jewish Synagogue, as the one with the al robe meant the Church of Christ.

Another matter for which the female taste seemed not much to care was theology in the metaphysical sense. Mary troubled herself little about theology except when she retired into the south transept with Pierre de Dreux. Even there one finds little said about the Trinity, always the most metaphysical subtlety of the Church. Indeed, you might find much amusement here in searching the cathedral for any distinct expression at all of the Trinity as a dogma recognized by Mary. One cannot take seriously the idea that the three doors, the three portals, and the three aisles express the Trinity, because, in the first place, there was no rule about it; churches might have what portals and aisles they pleased; both Paris and Bourges have five; the doors themselves are not allotted to the three members of the Trinity, nor are the portals; while another more serious objection is that the side doors and aisles are not of equal importance with the central, but mere adjuncts and dependencies, so that the architect who had misled the ignorant public into accepting so black a heresy would have deserved the stake, and would probably have gone to it. Even this suggestion of trinity is wanting in the transepts, which have only one aisle, and in the choir, which has five, as well as five or seven chapels, and, as far as an ignorant mind can penetrate, no triplets whatever. Occasionally, no doubt, you will discover in some sculpture or window, a symbol of the Trinity, but this discovery itself amounts to an admission of its absence as a controlling idea, for the ordinary worshipper must have been at least as blind as we are, and to him, as to us, it would have seemed a wholly subordinate detail. Even if the Trinity, too, is anywhere expressed, you will hardly find here an attempt to explain its metaphysical meaning — not even a mystic triangle.

The church is wholly given up to the Mother and the Son. The Father seldom appears; the Holy Ghost still more rarely. At least, this is the impression made on an ordinary visitor who has no motive to be orthodox; and it must have been the same with the thirteenth-century worshipper who came here with his mind absorbed in the perfections of Mary. Chartres represents, not the Trinity, but the identity of the Mother and

n. The Son represents the Trinity, which is thus absorbed in
Mother. The idea is not orthodox, but this is no affair of
rs. The Church watches over its own.

The Virgin's wants and tastes, positive and negative, ought
w to be clear enough to enable you to feel the artist's sincerity
trying to satisfy them; but first you have still to convince
urselves of the people's sincerity in employing the artists.
is point is the easiest of all, for the evidence is express. In
year 1145 when the old flèche was begun — the year before
nt Bernard preached the second crusade at Vézelay —
bot Haimon, of Saint-Pierre-sur-Dives in Normandy, wrote
the monks of Tutbury Abbey in England a famous letter to
of the great work which the Virgin was doing in France
l which began at the Church of Chartres. 'Hujus sacrae
titutionis ritus apud Carnotensem ecclesiam est inchoatus.'
om Chartres it had spread through Normandy, where it
oduced among other things the beautiful spire which we saw
Saint-Pierre-sur-Dives. 'Postremo per totam fere Norman-
m longe lateque convaluit ac loca per singula Matri miser-
rdiae dicata praecipue occupavit.' The movement affected
ecially the places devoted to Mary, but ran through all
rmandy, far and wide. Of all Mary's miracles, the best at-
ed, next to the preservation of her church, is the building
t; not so much because it surprises us as because it surprised
n more the people of the time and the men who were its
ruments. Such deep popular movements are always sur-
ing, and at Chartres the miracle seems to have occurred
ee times, coinciding more or less with the dates of the cru-
es, and taking the organization of a crusade, as Archbishop
go of Rouen described it in a letter to Bishop Thierry of
iens. The most interesting part of this letter is the evident
onishment of the writer, who might be talking to us today,
nodern is he:

> The inhabitants of Chartres have combined to aid in the con-
> ruction of their church by transporting the materials; our Lord
> as rewarded their humble zeal by miracles which have roused the
> Normans to imitate the piety of their neighbours. . . . Since then

the faithful of our diocese and of other neighbouring regions have formed associations for the same object; they admit no one into their company unless he has been to confession, has renounced enmities and revenges, and has reconciled himself with his enemies. That done, they elect a chief, under whose direction they conduct their waggons in silence and with humility.

The quarries at Berchères-l'Evêque are about five miles from Chartres. The stone is excessively hard, and was cut in blocks of considerable size, as you can see for yourselves; blocks which required great effort to transport and lay in place. The work was done with feverish rapidity, as it still shows, but it is the solidest building of the age, and without a sign of weakness yet. The Abbot told, with more surprise than pride, of the spirit which was built into the cathedral with the stone:

Who has ever seen! — Who has ever heard tell, in times past, that powerful princes of the world, that men brought up in honour and in wealth, that nobles, men and women, have bent their proud and haughty necks to the harness of carts, and that, like beasts of burden, they have dragged to the abode of Christ these waggons, loaded with wines, grains, oil, stone, wood, and all that is necessary for the wants of life, or for the construction of the church? But while they draw these burdens, there is one thing admirable to observe; it is that often when a thousand persons and more are attached to the chariots — so great is the difficulty — yet they march in such silence that not a murmur is heard, and truly if one did not see the thing with one's eyes, one might believe that among such a multitude there was hardly a person present. When they halt on the road, nothing is heard but the confession of sins, and pure and suppliant prayer to God to obtain pardon. At the voice of the priests who exhort their hearts to peace, they forget all hatred, discord is thrown far aside, debts are remitted, the unity of hearts is established.

But if any one is so far advanced in evil as to be unwilling to pardon an offender, or if he rejects the counsel of the priest who has piously advised him, his offering is instantly thrown from the wagon as impure, and he himself ignominiously and shamefully excluded from the society of the holy. There one sees the priests who preside over each chariot exhort every one to peni-

ence, to confession of faults, to the resolution of better life! There one sees old people, young people, little children, calling on the Lord with a suppliant voice, and uttering to Him, from the depth of the heart, sobs and sighs with words of glory and praise! After the people, warned by the sound of trumpets and the sight of banners, have resumed their road, the march is made with such ease that no obstacle can retard it. . . . When they have reached the church they arrange the waggons about it like a spiritual camp, and during the whole night they celebrate the watch by hymns and canticles. On each waggon they light tapers and lamps; they place there the infirm and sick, and bring them the precious relics of the Saints for their relief. Afterwards the priests and clerics close the ceremony by processions which the people follow with devout heart, imploring the clemency of the Lord and of his Blessed Mother for the recovery of the sick.

Of course, the Virgin was actually and constantly present ring all this labour, and gave her assistance to it, but you ould get no light on the architecture from listening to an count of her miracles, nor do they heighten the effect of pular faith. Without the conviction of her personal presence, en would not have been inspired; but, to us, it is rather the piration of the art which proves the Virgin's presence, and can better see the conviction of it in the work than in the rds. Every day, as the work went on, the Virgin was pre- nt, directing the architects, and it is this direction that we e going to study, if you have now got a realizing sense of at it meant. Without this sense, the church is dead. Most rsons of a deeply religious nature would tell you emphati- ly that nine churches out of ten actually were dead-born, er the thirteenth century, and that church architecture be- me a pure matter of mechanism and mathematics; but that a question for you to decide when you come to it; and the easure consists not in seeing the death, but in feeling the e.

Now let us look about!

VII. Roses and Apses

LIKE all great churches, that are not mere storehouses of theology, Chartres expressed, besides whatever else it meant, an emotion, the deepest man ever felt — the struggle of his own littleness to grasp the infinite. You may, if you like, figure in it a mathematic formula of infinity — the broken arch, our finite idea of space; the spire, pointing, with its converging lines, to unity beyond space; the sleepless, restless thrust of the vaults, telling the unsatisfied, incomplete, over-strained effort of man to rival the energy, intelligence, and purpose of God. Thomas Aquinas and the schoolmen tried to put it in words, but their Church is another chapter. In act, all man's work ends there; — mathematics, physics, chemistry, dynamics, optics, every sort of machinery science may invent — to this favour come at last, as religion and philosophy did before science was born. All that the centuries can do is to express the idea differently: a miracle or a dynamo; a dome or a coal-pit; a cathedral or a world's fair; and sometimes to confuse the two expressions together. The world's fair tends more and more vigorously to express the thought of infinite energy; the great cathedrals of the Middle Ages always reflected the industries and interests of a world's fair. Chartres showed it less than Laon or Paris, for Chartres was never a manufacturing town, but a shrine, such as Lourdes, where the Virgin was known to have done miracles, and had been seen in person; but still the shrine turned itself into a market and created valuable industries.

deed, this was the chief objection which Saint Paul made to hesus and Saint Bernard to the cathedrals. They were in ne ways more industrial than religious. The mere masonry d structure made a vast market for labour; the fixed metal- rk and woodwork were another; but the decoration was by the greatest. The wood-carving, the glass windows, the lpture, inside and out, were done mostly in workshops the spot, but besides these fixed objects, precious works of highest perfection filled the church treasuries. Their money lue was great then; it is greater now. No world's fair is likely do better today. After five hundred years of spoliation, these jects fill museums still, and are bought with avidity at every ction, at prices continually rising and quality steadily falling, til a bit of twelfth-century glass would be a trouvaille like an erald; a tapestry earlier than 1600 is not for mere tourists hope; an enamel, a missal, a crystal, a cup, an embroidery the Middle Ages belongs only to our betters, and almost variably, if not to the State, to the rich Jews, whose instinctive ste has seized the whole field of art which rested on their gradation. Royalty and feudality spent their money rather arms and clothes. The Church alone was universal patron, d the Virgin was the dictator of taste.

With the Virgin's taste, during her regency, critics never find lt. One cannot know its whole magnificence, but one can cept it as a matter of faith and trust, as one accepts all her er miracles without cavilling over small details of fact. The riod of eighteenth-century scepticism about such matters and e bourgeois taste of Voltaire and Diderot have long since ssed, with the advent of a scientific taste still more miraculous; e whole world of the Virgin's art, catalogued in the 'Diction- ire du Mobilier Français' in six volumes by Viollet-le-Duc; rrated as history by M. Labarte, M. Molinier, M. Paul La- ix; catalogued in museums by M. du Sommerard and a score others, in works almost as costly as the subjects — all the vast riety of bric-à-brac, useful or ornamental, belonging to the urch, increased enormously by the insatiable, universal, vate demands for imagery, in ivory, wood, metal, stone, for

every room in every house, or hung about every neck, or stuck on every hat, made a market such as artists never knew before or since, and such as instantly explains to the practical American not only the reason for the Church's tenacity of life, but also the inducements for its plunder. The Virgin especially required all the resources of art, and the highest. Notre Dame of Chartres would have laughed at Notre Dame of Paris if she had detected an economy in her robes; Notre Dame of Rheims or Rouen would have derided Notre Dame of Amiens if she had shown a feminine, domestic, maternal turn toward cheapness. The Virgin was never cheap. Her great ceremonies were as splendid as her rank of Queen in Heaven and on Earth required; and as her procession wound its way along the aisles, through the crowd of her subjects, up to the high altar, it was impossible then, and not altogether easy now, to resist the rapture of her radiant presence. Many a young person, and now and then one who is not in first youth, witnessing the sight in the religious atmosphere of such a church as this, without a suspicion of susceptibility, has suddenly seen what Paul saw on the road to Damascus, and has fallen on his face with the crowd, grovelling at the foot of the Cross, which, for the first time in his life, he feels.

If you want to know what churches were made for, come down here on some great festival of the Virgin, and give yourself up to it; but come alone! That kind of knowledge cannot be taught and can seldom be shared. We are not now seeking religion; indeed, true religion generally comes unsought. We are trying only to feel Gothic art. For us, the world is not a schoolroom or a pulpit, but a stage, and the stage is the highest yet seen on earth. In this church the old Romanesque leaps into the Gothic under our eyes; of a sudden, between the portal and the shrine, the infinite rises into a new expression, always a rare and excellent miracle in thought. The two expressions are nowhere far apart; not further than the Mother from the Son. The new artist drops unwillingly the hand of his father or his grandfather; he looks back, from every corner of his own work, to see whether it goes with the old. He will not part with

e western portal or the lancet windows; he holds close to the und columns of the choir; he would have kept the round arch he could, but the round arch was unable to do the work; it uld not rise; so he broke it, lifted the vaulting, threw out flying ttresses, and satisfied the Virgin's wish.

The matter of Gothic vaulting, with its two weak points, the ing buttress and the false, wooden shelter-roof, is the bête ire of the Beaux Arts. The duty of defence does not lie on urists, who are at best hardly able to understand what it atters whether a wall is buttressed without or within, and nether a roof is single or double. No one objects to the dome of int Peter's. No one finds fault with the Pont Neuf. Yet it is ue that the Gothic architect showed contempt for facts. nce he could not support a heavy stone vault on his light lumns, he built the lightest possible stone vault and protected with a wooden shelter-roof which constantly burned. The htened vaults were still too heavy for the walls and columns, the architect threw out buttress beyond buttress resting on parate foundations, exposed to extreme inequalities of weather, d liable to multiplied chances of accident. The results were rtainly disastrous. The roofs burned; the walls yielded.

Flying buttresses were not a necessity. The Merveille had ne; the Angevin school rather affected to do without them; bi had none; Assisi stands up independent; but they did give pport wherever the architect wanted it and nowhere else; ey were probably cheap; and they were graceful. Whatever pression they gave to a church, at least it was not that of fortress. Amiens and Albi are different religions. The ex- ession concerns us; the construction concerns the Beaux Arts. ne problem of permanent equilibrium which distresses the ilder of arches is a technical matter which does not worry, but ly amuses, us who sit in the audience and look with delight the theatrical stage-decoration of the Gothic vault; the tonishing feat of building up a skeleton of stone ribs and rtebrae, on which every pound of weight is adjusted, divided, d carried down from level to level till it touches ground at distance as a bird would alight. If any stone in any part, from

apex to foundation, weathers or gives way, the whole must yield, and the charge for repairs is probably great, but, on the best building the École des Beaux Arts can build, the charge for repairs is not to be wholly ignored, and at least the Cathedral of Chartres, in spite of terribly hard usage, is as solid today as when it was built, and as plumb, without crack or crevice. Even the towering fragment at Beauvais, poorly built from the first, which has broken down oftener than most Gothic structures, and seems ready to crumble again whenever the wind blows over its windy plains, has managed to survive, after a fashion, six or seven hundred years, which is all that our generation had a right to ask.

The vault of Beauvais is nearly one hundred and sixty feet high (48 metres), and was cheaply built. The vault of Saint Peter's at Rome is nearly one hundred and fifty feet (45 metres). That of Amiens is one hundred and forty-four feet (44 metres). Rheims, Bourges, and Chartres are nearly the same height; at the entrance, one hundred and twenty-two feet. Paris is one hundred and ten feet. The Abbé Bulteau is responsible for these measurements; but at Chartres, as in several very old churches, the nave slopes down to the entrance, because — as is said — pilgrims came in such swarms that they were obliged to sleep in the church, and the nave had to be sluiced with water to clean it. The true height of Chartres, at the croisée of nave and transept, is as near as possible one hundred and twenty feet (36.55 metres).

The measured height is the least interest of a church. The architect's business is to make a small building look large, and his failures are in large buildings which he makes to look small. One chief beauty of the Gothic is to exaggerate height, and one of its most curious qualities is its success in imposing an illusion of size. Without leaving the heart of Paris any one can study this illusion in the two great churches of Notre Dame and Saint-Sulpice; for Saint-Sulpice is as lofty as Notre Dame in vaulting, and larger in its other dimensions, besides being, in its style, a fine building; yet its Roman arches show, as if they were of the eleventh century, why the long, clean, unbroken, refined

CHARTRES: THE NAVE

lines of the Gothic, curving to points, and leading the eye with a sort of compulsion to the culminating point above, should have made an architectural triumph that carried all Europe off its feet with delight. The world had seen nothing to approach it except, perhaps, in the dome of Sancta Sophia in Constantinople; and the discovery came at a moment when Europe was making its most united and desperate struggle to attain the kingdom of Heaven.

According to Viollet-le-Duc, Chartres was the final triumph of the experiment on a very great scale, for Chartres has never been altered and never needed to be strengthened. The flying buttresses of Chartres answered their purpose, and if it were not a matter of pure construction it would be worth while to read what Viollet-le-Duc says about them (article, 'Arcs-boutants'). The vaulting above is heavy, about fifteen inches thick; the buttressing had also to be heavy; and to lighten it, the architect devised an amusing sort of arcades, applied on his outside buttresses. Throughout the church, everything was solid beyond all later custom, so that architects would have to begin by a study of the crypt which came down from the eleventh century so strongly built that it still carries the church without a crack in its walls; but if we went down into it, we should understand nothing; so we will begin, as we did outside, at the front.

A single glance shows what trouble the architect had with the old façade and towers, and what temptation to pull them all down. One cannot quite say that he has spoiled his own church in trying to save what he could of the old, but if he did not quite spoil it, he saved it only by the exercise of an amount of intelligence that we shall never learn enough to feel our incapacity to understand. True ignorance approaches the infinite more nearly than any amount of knowledge can do, and, in our case, ignorance is fortified by a certain element of nineteenth-century indifference which refuses to be interested in what it cannot understand; a violent reaction from the thirteenth century which cared little to comprehend anything except the incomprehensible. The architect at Chartres was required by

the Virgin to provide more space for her worshippers within the church, without destroying the old portal and flèche which she loved. That this order came directly from the Virgin, may be taken for granted. At Chartres, one sees everywhere the Virgin, and nowhere any rival authority; one sees her give orders, and architects obey them; but very rarely a hesitation as though the architect were deciding for himself. In his western front, the architect has obeyed orders so literally that he has not even taken the trouble to apologize for leaving unfinished the details which, if he had been responsible for them, would have been his anxious care. He has gone to the trouble of moving the heavy doorways forward, so that the chapels in the towers, which were meant to open on a porch, now open into the nave, and the nave itself has, in appearance, two more spans than in the old church; but the work shows blind obedience, as though he were doing his best to please the Virgin without trying to please himself. Probably he could in no case have done much to help the side aisles in their abrupt collision with the solid walls of the two towers, but he might at least have brought the vaulting of his two new bays, in the nave, down to the ground, and finished it. The vaulting is awkward in these two bays, and yet he has taken great trouble to effect what seems at first a small matter. Whether the great rose window was an afterthought or not can never be known, but any one can see with a glass, and better on the architectural plan, that the vaulting of the main church was not high enough to admit the great rose, and that the architect has had to slope his two tower-spans upward. So great is the height that you cannot see this difference of level very plainly even with a glass, but on the plans it seems to amount to several feet; perhaps a metre. The architect has managed to deceive our eyes, in order to enlarge the rose; but you can see as plainly as though he were here to tell you, that, like a great general, he has concentrated his whole energy on the rose, because the Virgin has told him that the rose symbolized herself, and that the light and splendour of her appearance in the west were to redeem all his awkwardnesses.

Of course this idea of the Virgin's interference sounds to you a mere bit of fancy, and that is an account which may be settled between the Virgin and you; but even twentieth-century eyes can see that the rose redeems everything, dominates everything, and gives character to the whole church.

In view of the difficulties which faced the artist, the rose is inspired genius — the kind of genius which Shakespeare showed when he took some other man's play, and adapted it. Thus far, it shows its power chiefly by the way it comes forward and takes possession of the west front, but if you want a foot-rule to measure by, you may mark that the old, twelfth-century lancet-windows below it are not exactly in its axis. At the outset, in the original plan of 1090, or thereabouts, the old tower — the southern tower — was given greater width than the northern. Such inequalities were common in the early churches, and so is a great deal of dispute in modern books whether they were accidental or intentional, while no one denies that they are amusing. In these towers the difference is not great — perhaps fourteen or fifteen inches — but it caused the architect to correct it, in order to fit his front to the axis of the church, by throwing his entrance six or seven inches to the south, and narrowing to that extent the south door and south lancet. The effect was bad, even then, and went far to ruin the south window; but when, after the fire of 1194, the architect inserted his great rose, filling every inch of possible space between the lancet and the arch of the vault, he made another correction which threw his rose six or seven inches out of axis with the lancets. Not one person in a hundred thousand would notice it, here in the interior, so completely are we under the control of the artist and the Virgin; but it is a measure of the power of the rose.

Looking farther, one sees that the rose-motive, which so dominates the west front, is carried round the church, and comes to another outburst of splendour in the transepts. This leads back to fenestration on a great scale, which is a terribly ambitious flight for tourists; all the more, because here the tourist gets little help from the architect, who, in modern times, has seldom the opportunity to study the subject at all, and ac-

cepts as solved the problems of early Gothic fenestration. On becomes pedantic and pretentious at the very sound of the word which is an intolerable piece of pedantry in itself; but Chartre is all windows, and its windows were as triumphant as it Virgin, and were one of her miracles. One can no more overlook the windows of Chartres than the glass which is in them. We have already looked at the windows of Mantes; we have seen what happened to the windows at Paris. Paris had at one leap risen twenty-five feet higher than Noyon, and even at Noyon the architect, about 1150, had been obliged to invent new fenestration. Paris and Mantes, twenty years later, made an other effort, which proved a failure. Then the architect o Chartres, in 1195, added ten feet more to his vault, and under took, once for all, to show how a great cathedral should be lighted. As an architectural problem, it passes far beyond our powers of understanding, even when solved; but we can always turn to see what the inevitable Viollet-le-Duc says about it solution at Chartres:

> Toward the beginning of the thirteenth century, the architec of the Cathedral of Chartres sought out entirely new window combinations to light the nave from above. Below, in the side aisles he kept to the customs of the times; that is, he opened pointed windows which did not wholly fill the spaces between the piers; he wanted, or was willing to leave here below, the effect of a wall. But in the upper part of his building we see that he changed the system; he throws a round arch directly across from one pier to the next; then, in the enormous space which remains within each span, he inserts two large pointed windows sur mounted by a great rose. . . . We recognize in this construction o Notre Dame de Chartres a boldness, a force, which contrast with the fumbling of the architects in the Île de France and Champagne For the first time one sees at Chartres the builder deal frankly with the clerestory, or upper fenestration, occupying the whole width of the arches, and taking the arch of the vault as the arch of the window. Simplicity of construction, beauty in form, strong workmanship, structure true and solid, judicious choice of material all the characteristics of good work, unite in this magnificent specimen of architecture at the beginning of the thirteenth century

Viollet-le-Duc does not call attention to a score of other matters which the architect must have had in his mind, such as the distribution of light, and the relations of one arrangement with another: the nave with the aisles, and both with the transepts, and all with the choir. Following him, we must take the choir separately, and the aisles and chapels of the apse also. One cannot hope to understand all the experiments and refinements of the artist, either in their successes or their failures, but, with diffidence, one may ask one's self whether the beauty of the arrangement, as compared with the original arrangement in Paris, did not consist in retaining the rose-motive throughout, while throwing the whole upper wall into window. Triumphant as the clerestory windows are, they owe their charm largely to their roses, as you see by looking at the same scheme applied in a larger scale on the transept fronts; and then, by taking stand under the croisée, and looking at all in succession as a whole.

The rose window was not Gothic but Romanesque, and needed a great deal of coaxing to feel at home within the pointed arch. At first, the architects felt the awkwardness so strongly that they avoided it wherever they could. In the beautiful façade of Laon, one of the chief beauties is the setting of the rose under a deep round arch. The western roses of Mantes and Paris are treated in the same way, although a captious critic might complain that their treatment is not so effective or so logical. Rheims boldly imprisoned the roses within the pointed arch; but Amiens, toward 1240, took refuge in the same square exterior setting that was preferred, in 1200, here at Chartres; and in the interior of Amiens the round arch of the rose is the last vault of the nave, seen through a vista of pointed vaults, as it is here. All these are supposed to be among the chief beauties of the Gothic façade, although the Gothic architect, if he had been a man of logic, would have clung to his lines, and put a pointed window in his front, as in fact he did at Coutances. He felt the value of the rose in art, and perhaps still more in religion, for the rose was Mary's emblem. One is fairly sure that the great Chartres rose of the west front was put there to

please her, since it was to be always before her eyes, the mos conspicuous object she would see from the high altar, and there fore the most carefully considered ornament in the whole churc outside the choir. The mere size proves the importance sh gave it. The exterior diameter is nearly forty-four feet (13.3 metres). The nave of Chartres is, next perhaps to the nave o Angers, the widest of all Gothic naves; about fifty-three fee (16.31 metres); and the rose takes every inch it can get of thi enormous span. The value of the rose, among architects of th time, was great, since it was the only part of the church tha Villard de Honnecourt sketched; and since his time, it ha been drawn and redrawn, described and commented by genera tions of architects till it has become as classic as the Parthenon

Yet this Chartres rose is solid, serious, sedate, to a degre unusual in its own age; it is even more Romanesque than th pure Romanesque roses. At Beauvais you must stop a momen to look at a Romanesque rose on the transept of the Church o Saint-Étienne; Viollet-le-Duc mentions it, with a drawin (article, 'Pignon'), as not earlier than the year 1100, therefor about a century earlier than the rose of Chartres; it is no properly a rose, but a wheel of fortune, with figures climbing u and falling over. Another supposed twelfth-century rose is a Étampes, which goes with that of Laon and Saint-Leu-d Esserent and Mantes. The rose of Chartres is so much the mos serious of them all that Viollet-le-Duc has explained it by it material — the heavy stone of Berchères; — but the materia was not allowed to affect the great transept roses, and th architect made his material yield to his object wherever h thought it worth while. Standing under the central croisée you can see all three roses by simply turning your head. Tha on the north, the Rose de France, was built, or planned, betwee 1200 and 1210, in the reign of Philip Augustus, since the porc outside, which would be a later construction, was begun b 1212. The Rose de France is the same in diameter as the weste rose, but lighter, and built of lighter stone. Opposite the Ros de France stands, on the south front, Pierre Mauclerc's Rose d Dreux, of the same date, with the same motive, but even lighte

ore like a rose and less like a wheel. All three roses must have een planned at about the same time, perhaps by the same rchitect, within the same workshop; yet the western rose ands quite apart, as though it had been especially designed to it the twelfth-century façade and portal which it rules. Whether this was really the artist's idea is a question that needs e artist to answer; but that this is the effect, needs no expert prove; it stares one in the face. Within and without, one feels at the twelfth-century spirit is respected and preserved with e same religious feeling which obliged the architect to injure s own work by sparing that of his grandfathers.

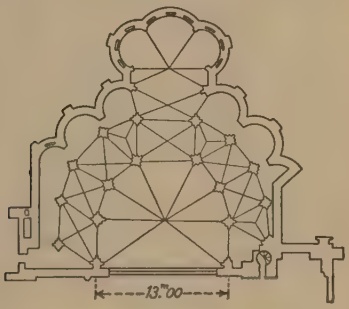
Conspicuous, then, in the west front are two feelings: reect for the twelfth-century work, and passion for the rose nestration; both subordinated to the demand for light. If it orries you to have to believe that these three things are in ct one; that the architect is listening, like the stone Abraham, r orders from the Virgin, while he caresses and sacrifices his ild; that Mary and not her architects built this façade; if the vine intention seems to you a needless impertinence, you can on get free from it by going to any of the later churches, here you will not be forced to see any work but that of the rchitect's compasses. According to Viollet-le-Duc, the inration ceased about 1250, or, as the Virgin would have dated on the death of Blanche of Castile in 1252. The work of hartres, where her own hand is plainly shown, belongs in eling, if not in execution, to the last years of the twelfth ntury (1195–1200). The great western rose which gives the otive for the whole decoration and is repeated in the great ses of the transepts, marks the Virgin's will — the taste and owledge of 'cele qui la rose est des roses,' or, if you prefer the atin of Adam de Saint-Victor, the hand of her who is 'Super sam rosida.'

All this is easy; but if you really cannot see the hand of Mary rself in these broad and public courts, which were intended, t for her personal presence, but for the use of her common ople, you had better stop here, and not venture into the choir. reat halls seem to have been easy architecture. Naves and

transepts were not often failures; façades and even towers and flèches are invariably more or less successful because they are more or less balanced, mathematical, calculable products of reason and thought. The most serious difficulties began only with the choir, and even then did not become desperate until the architect reached the curve of the apse, with its impossible vaultings, its complicated lines, its cross-thrusts, its double problems, internal and external, its defective roofing and unequal lighting. A perfect Gothic apse was impossible; an apse that satisfied perfectly its principal objects was rare; the simplest and cheapest solution was to have no apse at all, and that was the English scheme, which was tried also at Laon; a square, flat wall and window. If the hunt for Norman towers offered a summer's amusement, a hunt for apses would offer an education but it would lead far out of France. Indeed, it would be simpler to begin at once with Sancta Sophia at Constantinople, San Vitale at Ravenna and Monreale at Palermo, and the churches at Torcello and Murano, and San Marco at Venice; and admit that no device has ever equalled the startling and mystical majesty of the Byzantine half-dome, with its marvellous mosaic Madonna dominating the church, from the entrance, with her imperial and divine presence. Unfortunately, the northern churches needed light, and the northern architects turned their minds to a desperate effort for a new apse.

The scheme of the cathedral at Laon seems to have been rejected unanimously; the bare, flat wall at the end of the choir was an eyesore; it was quite bad enough at the end of the nave and became annoying at the end of the transepts, so that at Noyon and Soissons the architect, with a keen sense of interior form, had rounded the transept ends; but, though external needs might require a square transept, the unintelligence of the flat wall became insufferable at the east end. Neither did the square choir suit the church ceremonies and processions, or offer the same advantages of arrangement, as the French understood them. With one voice, the French architects seem to have rejected the Laon experiment, and turned back to a solution taken directly from the Romanesque.

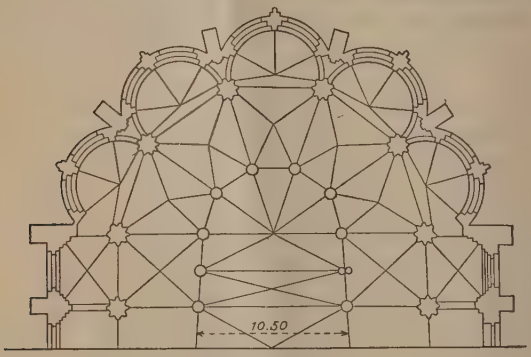
Quite early — in the eleventh century — a whole group of churches had been built in Auvergne — at Clermont and Issoire, for example — possibly by one architect, with a circular apse, breaking out into five apsidal chapels. Tourists who get down as far south as Toulouse see another example of this Romanesque apse in the famous Church of Saint-Sernin, of the twelfth century; and few critics take offence at one's liking it. Indeed, as far as concerns the exterior, one might even risk thinking it more charming than the exterior of any Gothic apse ever built.



SAINT-MARTIN-DES-CHAMPS

Many of these Romanesque apses of the eleventh and twelfth centuries still remain in France, showing themselves in unsuspected parish churches, here and there, but always a surprise for their quiet, unobtrusive grace, making a harmony with the Romanesque tower, if there is one, into which they rise, as at Saint-Sernin; but all these churches had only one aisle, and, in the interior, there came invariable trouble when the vaults rose in height. The architect of Chartres, in 1200, could get no direct help from these, or even from Paris which was a beautifully perfect apse, but had no apsidal chapels. The earliest apse that could have served as a suggestion for Chartres — or, at least, as a point of observation for us — was that of the Abbey Church of Saint-Martin-des-Champs, which we went to see in

Paris, and which is said to date from about 1150. Here is a circular choir, surrounded by two rows of columns, irregularly spaced, with circular chapels outside, which seems to have been more or less what the architect of Chartres, for the Virgin's purposes, had set his heart on obtaining. Closely following the scheme of Saint-Martin-des-Champs came the scheme of the Abbey Church at Vézelay, built about 1160–80. Here the

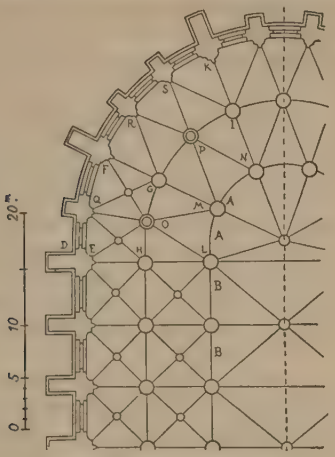


VÉZELAY

vaulting sprang directly from the last arch of the choir, as is shown on the plan, and bearing first on the light columns of the choir, which were evenly spaced, then fell on a row of heavier columns outside, which were also evenly spaced, and came to rest at last on massive piers, between which were five circular chapels. The plan shows at a glance that this arrangement stretched the second row of columns far apart, and that a church much larger than Vézelay would need to space them so much farther apart that the arch uniting them would have to rise indefinitely; while, if beyond this, another aisle were added outside, the piers finally would require impossible vaulting.

The problem stood thus when the great cathedrals were undertaken, and the architect of Paris boldly grappled with the

double aisle on a scale requiring a new scheme. Here, in spite of the most virtuous resolutions not to be technical, we must attempt a technicality, because without it, one of the most



NOTRE DAME DE PARIS

interesting eccentricities of Chartres would be lost. Once more, Viollet-le-Duc:

> As the architect did not want to give the interior bays of the apse spaces between the columns (AA) less than that of the parallel bays (BB), it followed that the first radiating bay gave a first space (LMGH) which was difficult to vault, and a second space (HGEF) which was impossible; for how establish an arch from F to E? Even if round, its key would have risen much higher than the key of the pointed archivolt LM. As the second radiating bay opened out still wider, the difficulty was increased. The builder therefore inserted the two intermediate pillars O and P between the columns of the second aisle (H, G, and I); which he supported, in the outside wall of the church, by one corresponding pier (Q) in the first bay of the apse, and by two similar piers (R and S) in the second bay.

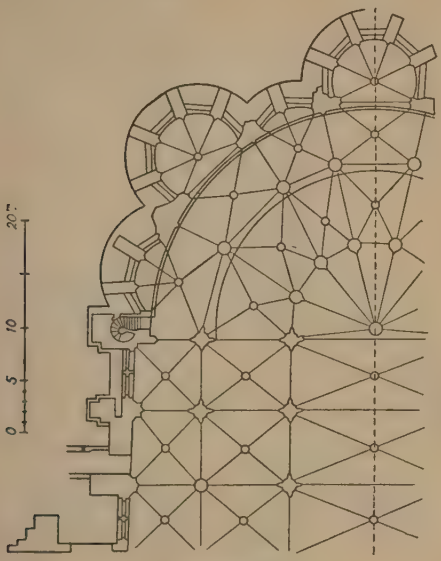
'There is no need to point out,' continued Viollet-le-Duc, as though he much suspected that there might be need of pointing out, 'what skill this system showed and how much the art of architecture had already been developed in the Île de France toward the end of the twelfth century; to what an extent the unity of arrangement and style preoccupied the artists of that province.'

In fact, the arrangement seems mathematically and technically perfect. At all events, we know too little to criticize it. Yet one would much like to be told why it was not repeated by any other architect or in any other church. Apparently the Parisians themselves were not quite satisfied with it, since they altered it a hundred years later, in 1296, in order to build out chapels between the piers. As the architects of each new cathedral had, in the interval, insisted on apsidal chapels, one may venture to guess that the Paris scheme hampered the services.

At Chartres the church services are Mary's own tastes; the church is Mary; and the chapels are her private rooms. She was not pleased with the arrangements made for her in her palace at Paris; they were too architectural; too regular and mathematical; too popular; too impersonal; and she rather abruptly ordered her architect at Chartres to go back to the old arrangement. The apse at Paris was hardly covered with its leading before the architect of Chartres adopted a totally new plan, which, according to Viollet-le-Duc, does him little credit, but which was plainly imposed on him, like the twelfth-century portal. Not only had it nothing of the mathematical correctness and precision of the Paris scheme, easy to understand and imitate, but it carried even a sort of violence — a wrench — in its system, as though the Virgin had said, with her grand Byzantine air: I will it!

'At Chartres,' said Viollet-le-Duc, 'the choir of the Cathedral presents a plan which does no great honour to its architect. There is want of accord between the circular apse and the parallel sides of the sanctuary; the spacings of the columns of the second collateral are loose (*lâches*); the vaults quite poorly

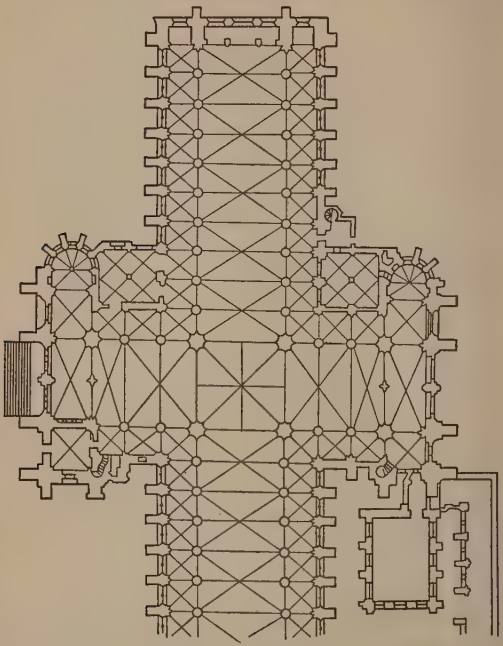
ombined; and in spite of the great width of the spaces between he columns of the second aisle, the architect had still to narrow hose between the interior columns.'



CHARTRES

The plan shows that, from the first, the architect must have eliberately rejected the Paris scheme; he must have begun by arrowing the spaces between his inner columns; then, with sort of violence, he fitted on his second row of columns; and, nally, he showed his motive by constructing an outer wall of an riginal or unusual shape. Any woman would see at once the ecret of all this ingenuity and effort. The Chartres apse, normous in size and width, is exquisitely lighted. Here, as verywhere throughout the church, the windows give the law, ut here they actually take place of law. The Virgin herself saw

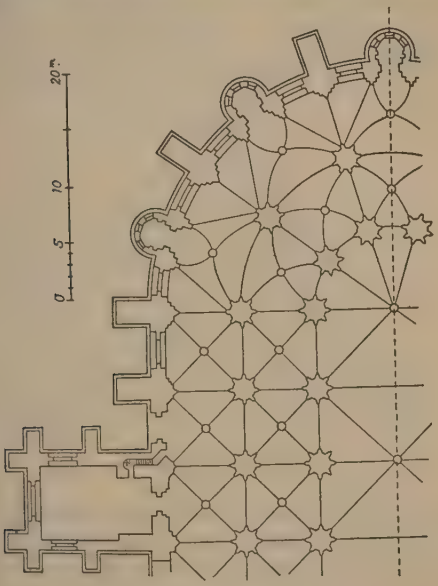
to the lighting of her own boudoir. According to Viollet-le-Duc, Chartres differs from all the other great cathedrals by being built not for its nave or even for its choir, but for its apse; it was planned not for the people or the court, but for the Queen; not



LAON

a church but a shrine; and the shrine is the apse where the Queen arranged her light to please herself and not her architect, who had already been sacrificed at the western portal and who had a free hand only in the nave and transepts where the Queen never went, and which, from her own apartment, she did not even see.

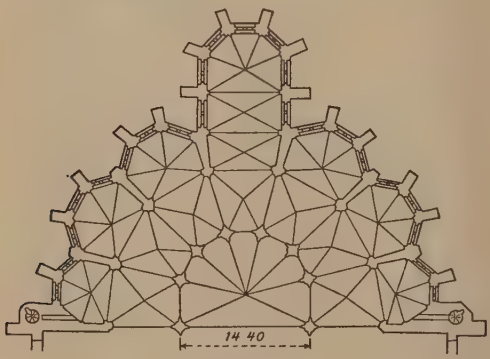
This is, in effect, what Viollet-le-Duc says in his professional anguage, which is perhaps — or sounds — more reasonable to ourists, whose imaginations are hardly equal to the effort of ancying a real deity. Perhaps, indeed, one might get so high as to imagine a real Bishop of Laon, who should have ordered his architect to build an enormous hall of religion, to rival the



BOURGES

immense abbeys of the day, and to attract the people, as though it were a clubroom. There they were to see all the great sights; church ceremonies; theatricals; political functions; there they were to do business, and frequent society. They were to feel at home in their church because it was theirs, and did not belong to a priesthood or to Rome. Jealousy of Rome was a leading motive of Gothic architecture, and Rome repaid it in full. The

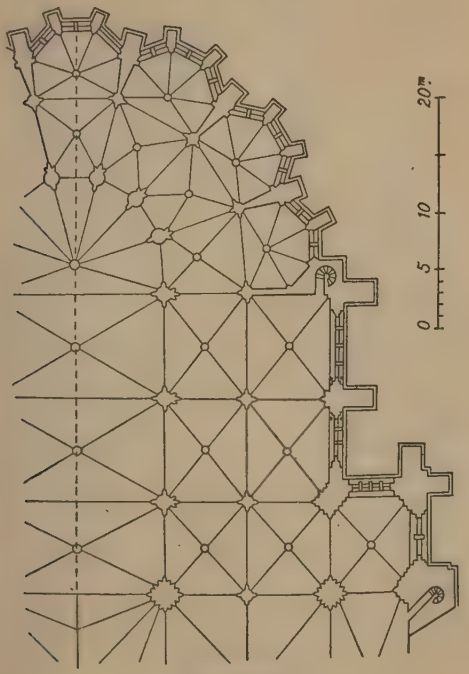
Bishop of Laon conceded at least a transept to custom or tradition, but the Archbishop of Bourges abolished even the transept, and the great hall had no special religious expression except in the circular apse with its chapels which Laon had abandoned. One can hardly decide whether Laon or Bourges is the more popular, industrial, political, or, in other words, the less religious; but the Parisians, as the plan of Viollet-le-Duc has shown, were quite as advanced as either, and only later altered their scheme into one that provided chapels for religious service.



AMIENS

Amiens and Beauvais have each seven chapels, but only one aisle, so that they do not belong in the same class with the apses of Paris, Bourges, and Chartres, though the plans are worth studying for comparison, since they show how many-sided the problem was, and how far from satisfied the architects were with their own schemes. The most interesting of all, for comparison with Chartres, is Le Mans, where the apsidal chapels are carried to fanaticism, while the vaulting seems to be reasonable enough, and the double aisle successfully managed, if Viollet-le-Duc permits ignorant people to form an opinion on architectural dogma. For our purposes, the architectural dogma may stand, and the Paris scheme may be taken for

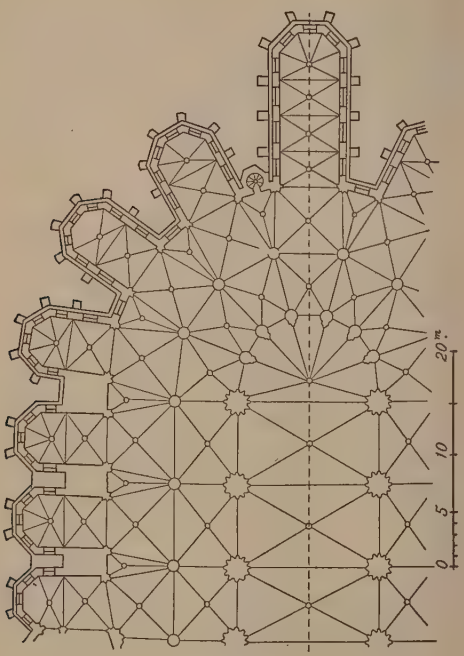
ranted, as alone correct and orthodox; all that Viollet-le-Duc eaches is that the Chartres scheme is unorthodox, not to say eretical; and this is the point on which his words are most nteresting.



BEAUVAIS

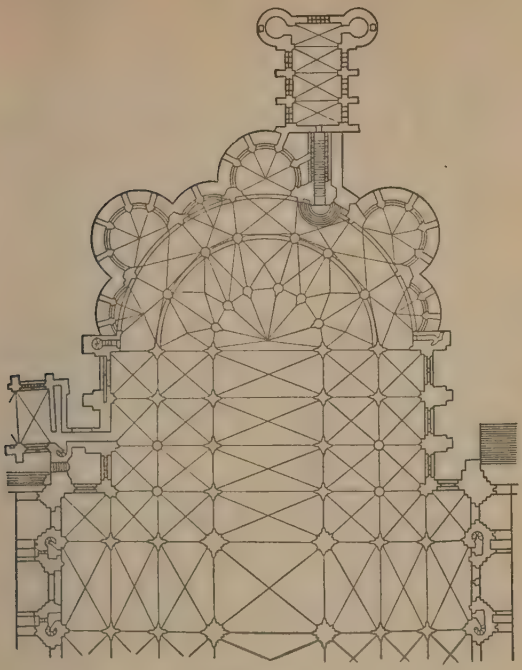
The church at Chartres belonged not to the people, not to he priesthood, and not even to Rome; it belonged to the Virgin. Here the religious influence appears wholly; three large chapels n the apse; four others less pronounced; double aisles of great vidth round the choir; vast transepts! Here the church cere-

monial could display all its pomp; the choir, more than at Paris more than at Bourges, more than at Soissons, and especially more than at Laon, is the principal object; for it, the church is built.'



LE MANS

One who is painfully conscious of ignorance, and who never would dream of suggesting a correction to anybody, may now venture to suggest an idea of any sort to an architect; but if I were allowed to paraphrase Viollet-le-Duc's words into a more or less emotional or twelfth-century form, one might say, after him, that, compared with Paris or Laon, the Chartres aps



CHARTRES

ows the same genius that is shown in the Chartres rose; the me large mind that overrules — the same strong will that fies difficulties. The Chartres apse is as entertaining as all e other Gothic apses together, because it overrides the archi- ct. You may, if you really have no imagination whatever, ject the idea that the Virgin herself made the plan; the feeble- ss of our fancy is now congenital, organic, beyond stimulant strychnine, and we shrink like sensitive-plants from the touch a vision or spirit; but at least one can still sometimes feel a oman's taste, and in the apse of Chartres one feels nothing else.

VIII. The Twelfth-Century Glass

AT LAST we are face to face with the crowning glory of Chartres. Other churches have glass — quantities of it, and very fine — but we have been trying to catch a glimpse of the glory which stands behind the glass of Chartres, and gives it quality and feeling of its own. For once the architect is useless and his explanations are pitiable; the painter helps still less; and the decorator, unless he works in glass, is the poorest guide of all, while, if he works in glass, he is sure to lead wrong; and all of them may toil until Pierre Mauclerc's stone Christ comes to life, and condemns them among the unpardonable sinners on the southern portal, but neither they nor any other artist will ever create another Chartres. You had better stop here, once for all, unless you are willing to feel that Chartres was made what it is, not by the artist, but by the Virgin.

If this imperial presence is stamped on the architecture and the sculpture with an energy not to be mistaken, it radiates through the glass with a light and colour that actually blind the true servant of Mary. One becomes, sometimes, a little incoherent in talking about it; one is ashamed to be as extravagant as one wants to be; one has no business to labour painfully to explain and prove to one's self what is as clear as the sun in the sky; one loses temper in reasoning about what can only be felt, and what ought to be felt instantly, as it was in the twelfth century, even by the *truie qui file* and the *ane qui vielle*.

Any one should feel it that wishes; any one who does not wish to feel it can let it alone. Still, it may be that not one tourist in a hundred — perhaps not one in a thousand of the English-speaking race — does feel it, or can feel it even when explained to him, for we have lost many senses.

Therefore, let us plod on, laboriously proving God, although, even to Saint Bernard and Pascal, God was incapable of proof; and using such material as the books furnish for help. It is not much. The French have been shockingly negligent of their greatest artistic glory. One knows not even where to seek. One must go to the National Library and beg as a special favour permission to look at the monumental work of M. Lasteyrie, if one wishes to make even a beginning of the study of French glass. Fortunately there exists a fragment of a great work which the Government began, but never completed, upon Chartres; and another, quite indispensable, but not official, upon Bourges; while Viollet-le-Duc's article 'Vitrail' serves as guide to the whole. Ottin's book 'Le Vitrail' is convenient. Mâle's volume 'L'Art Religieux' is essential. In English, Westlake's 'History of Design' is helpful. Perhaps, after reading all that is readable, the best hope will be to provide the best glasses with the largest possible field; and, choosing an hour when the church is empty, take seat about halfway up the nave, facing toward the western entrance with a morning light, so that the glass of the western windows shall not stand in direct sun.

The glass of the three lancets is the oldest in the cathedral. If the portal beneath it, with the sculpture, was built in the twenty or thirty years before 1150, the glass could not be much later. It goes with the Abbé Suger's glass at Saint-Denis, which was surely made as early as 1140–50, since the Abbé was a long time at work on it, before he died in 1152. Their perfection proves, what his biographer asserted, that the Abbé Suger spent many years as well as much money on his windows at Saint-Denis, and the specialists affirm that the three lancets at Chartres are quite as good as what remains of Suger's work. Viollet-le-Duc and M. Paul Durand, the Government expert, are positive that this glass is the finest ever made, as far as record

exists; and that the northern lancet representing the Tree of Jesse stands at the head of all glasswork whatever. The windows claim, therefore, to be the most splendid colour decoration the world ever saw, since no other material, neither silk nor gold, and no opaque colour laid on with a brush, can compare with translucent glass, and even the Ravenna mosaics or Chinese porcelains are darkness beside them.

The claim may not be modest, but it is none of ours. Viollet-le-Duc must answer for his own sins, and he chose the lancet window of the Tree of Jesse for the subject of his lecture on glass in general, as the most complete and perfect example of this greatest decorative art. Once more, in following him, one is dragged, in spite of one's self, into technique, and, what is worse, into a colour world whose technique was forgotten five hundred years ago. Viollet-le-Duc tried to recover it. 'After studying our best French windows,' he cautiously suggests that 'one might maintain,' as their secret of harmony, that 'the first condition for an artist in glass is to know how to manage blue. The blue is the light in windows, and light has value only by opposition.' The radiating power of blue is, therefore, the starting-point, and on this matter Viollet-le-Duc has much to say which a student would need to master; but a tourist never should study, or he ceases to be a tourist; and it is enough for us if we know that, to get the value they wanted, the artists hatched their blues with lines, covered their surface with figures as though with screens, and tied their blue within its own field with narrow circlets of white or yellow, which, in their turn, were beaded to fasten the blue still more firmly in its place. We have chiefly to remember the law that blue is light:

> But also it is that luminous colour which gives value to all others. If you compose a window in which there shall be no blue, you will get a dirty or dull (*blafard*) or crude surface which the eye will instantly avoid; but if you put a few touches of blue among all these tones, you will immediately get striking effects if not skilfully conceived harmony. So the composition of blue glass singularly preoccupied the glassworkers of the twelfth and thirteenth centuries. If there is only one red, two yellows, two or three purples,

and two or three greens at the most, there are infinite shades of blue, . . . and these blues are placed with a very delicate observation of the effects they should produce on other tones, and other tones on them.

Viollet-le-Duc took the window of the Tree of Jesse as his first ustration of the rule, for the reason that its blue ground is one ntinuous strip from top to bottom, with the subordinate red n either side, and a border uniting the whole so plainly that o one can fail to see its object or its method.

The blue tone of the principal subject [that is to say, the ground of the Tree of Jesse] has commanded the tonality of all the rest. This medium was necessary to enable the luminous splendour to display its energy. This primary condition had dictated the red ground for the prophets, and the return to the blue on reaching the outside semicircular band. To give full value both to the vigour of the red, and to the radiating transparency of the blue, the ground of the corners is put in emerald green; but then, in the corners themselves, the blue is recalled and is given an additional solidity of value by the delicate ornamentation of the squares.

This translation is very free, but one who wants to know these indows must read the whole article, and read it here in the urch, the Dictionary in one hand, and binocle in the other, r the binocle is more important than the Dictionary when it aches the complicated border which repeats in detail the lour-scheme of the centre:

The border repeats all the tones allotted to the principal subjects, but by small fragments, so that this border, with an effect both solid and powerful, shall not enter into rivalry with the large arrangements of the central parts.

One would think this simple enough; easily tested on any uminated manuscript, Arab, Persian, or Byzantine; verified any Oriental rug, old or new; freely illustrated by any hinese pattern on a Ming jar, or cloisonné vase; and offering kind of alphabet for the shop-window of a Paris modiste. strong red; a strong and a weak yellow; a strong and a weak rple; a strong and a weak green, are all to be tied together,

given their values, and held in their places by blue. The thing seems simpler still when it appears that perspective is forbidden, and that these glass windows of the twelfth and thirteenth centuries, like Oriental rugs, imply a flat surface, a wall which must not be treated as open. The twelfth-century glassworker would sooner have worn a landscape on his back than have costumed his church with it; he would as soon have decorated his floors with painted holes as his walls. He wanted to keep the coloured window flat, like a rug hung on the wall.

> The radiation of translucent colours in windows cannot be modified by the artist; all his talent consists in profiting by it, according to a given harmonic scheme on a single plane, like a rug, but not according to an effect of aerial perspective. Do what you like, a glass window never does and never can represent anything but a plane surface; its real virtues even exist only on that condition. Every attempt to present several planes to the eye is fatal to the harmony of colour, without producing any illusion in the spectator. . . . Translucid painting can propose as its object only a design supporting as energetically as possible a harmony of colours.

Whether this law is absolute you can tell best by looking at modern glass which is mostly perspective; but, whether you like it or not, the matter of perspective does not enter into a twelfth-century window more than into a Japanese picture, and may be ignored. The decoration of the twelfth century, as far as concerns us, was intended only for one plane, and a window was another form of rug or embroidery or mosaic, hung on the wall for colour — simple decoration to be seen as a whole. If the Tree of Jesse teaches anything at all, it is that the artist thought first of controlling his light, but he wanted to do it not in order to dim the colours; on the contrary, he toiled, like a jeweller setting diamonds and rubies, to increase their splendour. If his use of blue teaches this lesson, his use of green proves it. The outside border of the Tree of Jesse is a sort of sample which our schoolmaster Viollet-le-Duc sets, from which he requires us to study out the scheme, beginning with the treatment of light, and ending with the value of the emerald green ground in the corners.

Complicated as the border of the Tree of Jesse is, it has its ates in the borders of the two other twelfth-century windows, id a few of the thirteenth-century in the side aisles; but the uthern of the three lancets shows how the artists dealt with difficulty that upset their rule. The border of the southern ndow does not count as it should; something is wrong with and a little study shows that the builder, and not the glass- orker, was to blame. Owing to his miscalculation — if it was ally a miscalculation — in the width of the southern tower, e builder economized six or eight inches in the southern door id lancet, which was enough to destroy the balance between e colour-values, as masses, of the south and north windows. ne artist was obliged to choose whether he would sacrifice the ntre or the border of his southern window, and decided that e windows could not be made to balance if he narrowed the ntre, but that he must balance them by enriching the centre, id sacrificing the border. He has filled the centre with medal- ons as rich as he could make them, and these he has surrounded th borders, which are also enriched to the utmost; but these edallions with their borders spread across the whole window, id when you search with the binocle for the outside border, u see its pattern clearly only at the top and bottom. On the les, at intervals of about two feet, the medallions cover and terrupt it; but this is partly corrected by making the border, here it is seen, so rich as to surpass any other in the cathedral, en that of the Tree of Jesse. Whether the artist has succeeded not is a question for other artists — or for you, if you please — decide; but apparently he did succeed, since no one has er noticed the difficulty or the device.

The southern lancet represents the Passion of Christ. Grant- g to Viollet-le-Duc that the unbroken vertical colour-scheme the Tree of Jesse made the more effective window, one might ll ask whether the medallion-scheme is not the more interest- g. Once past the workshop, there can be no question about the Tree of Jesse has the least interest of all the three windows. genealogical tree has little value, artistic or other, except to ose who belong in its branches, and the Tree of Jesse was put

there, not to please us, but to please the Virgin. The Passion window was also put there to please her, but it tells a story, and does it in a way that has more novelty than the subject. The draughtsman who chalked out the design on the whitened table that served for his sketch-board was either a Greek, or had before him a Byzantine missal, or enamel or ivory. The first medallion on these legendary windows is the lower left-hand one, which begins the story or legend; here it represents Christ after the manner of the Greek Church. In the next medallion is the Last Supper; the fish on the dish is Greek. In the middle of the window, with the help of the binocle, you will see a Crucifixion, or even two, for on the left is Christ on the Cross, and on the right a Descent from the Cross; in this is the figure of a man pulling out with pincers the nails which fasten Christ's feet; a figure unknown to Western religious art. The Noli Me Tangere, on the right, near the top, has a sort of Greek character. All the critics, especially M. Paul Durand, have noticed this Byzantine look, which is even more marked in the Suger window at Saint-Denis, so as to suggest that both are by the same hand, and that the hand of a Greek. If the artist was really a Greek, he has done work more beautiful than any left at Byzantium, and very far finer than anything in the beautiful work at Cairo, but although the figures and subjects are more or less Greek, like the sculptures on the portal, the art seems to be French.

Look at the central window! Naturally, there sits the Virgin, with her genealogical tree on her left, and her Son's testimony on her right, to prove her double divinity. She is seated in the long halo; as, on the western portal, directly beneath her, her Son is represented in stone. Her crown and head, as well as that of the Child, are fourteenth-century restorations more or less like the original; but her cushioned throne and her robes of imperial state, as well as the flowered sceptre in either hand, are as old as the sculpture of the portal, and redolent of the first crusade. On either side of her, the Sun and the Moon offer praise; her two Archangels, Michael and Gabriel, with resplendent wings, offer not incense as in later times, but the two

ceptres of spiritual and temporal power; while the Child in her ap repeats His Mother's action and even her features and ex- pression. At first sight, one would take for granted that all this vas pure Byzantium, and perhaps it is; but it has rather the ook of Byzantium gallicized, and carried up to a poetic French deal. At Saint-Denis the little figure of the Abbé Suger at the eet of the Virgin has a very Oriental look, and in the twin nedallion the Virgin resembles greatly the Virgin of Chartres, et, for us, until some specialist shows us the Byzantine original, he work is as thoroughly French as the flèches of the churches.

Byzantine art is altogether another chapter, and, if we could ut take a season to study it in Byzantium, we might get great musement; but the art of Chartres, even in 1100, was French nd perfectly French, as the architecture shows, and the glass s even more French than the architecture, as you can detect n many other ways. Perhaps the surest evidence is the glass tself. The men who made it were not professionals but ama- eurs, who may have had some knowledge of enamelling, but vho worked like jewellers, unused to glass, and with the refine- nent that a reliquary or a crozier required. The cost of these vindows must have been extravagant; one is almost surprised hat they are not set in gold rather than in lead. The Abbé Suger shirked neither trouble nor expense, and the only serious piece of evidence that this artist was a Greek is given by his biographer who unconsciously shows that the artist cheated him: 'He sought carefully for makers of windows and workmen n glass of exquisite quality, especially in that made of sapphires n great abundance that were pulverized and melted up in the lass to give it the blue colour which he delighted to admire.' The 'materia saphirorum' was evidently something precious — s precious as crude sapphires would have been — and the words mply beyond question that the artist asked for sapphires and hat Suger paid for them; yet all specialists agree that the stone nown as sapphire, if ground, could not produce translucent olour at all. The blue which Suger loved, and which is pro- ably the same as that of these Chartres windows, cannot be nade out of sapphires. Probably the 'materia saphirorum'

means cobalt only, but whatever it was, the glassmakers seem to agree that this glass of 1140–50 is the best ever made. M. Paul Durand in his official report of 1881 said that these windows, both artistically and mechanically, were of the highest class: 'I will also call attention to the fact that the glass and the execution of the painting are, materially speaking, of a quality much superior to windows of the thirteenth and fourteenth centuries. Having passed several months in contact with these precious works when I copied them, I was able to convince myself of their superiority in every particular, especially in the upper parts of the three windows.' He said that they were perfect and irreproachable. The true enthusiast in glass would in the depths of his heart like to say outright that these three windows are worth more than all that the French have since done in colour, from that day to this; but the matter concerns us chiefly because it shows how French the experiment was, and how Suger's taste and wealth made it possible.

Certain it is, too, that the southern window — the Passion — was made on the spot, or near by, and fitted for the particular space with care proportionate to its cost. All are marked by the hand of the Chartres Virgin. They are executed not merely for her, but by her. At Saint-Denis the Abbé Suger appeared — it is true that he was prostrate at her feet, but still he appeared. At Chartres no one — no suggestion of a human agency — was allowed to appear; the Virgin permitted no one to approach her, even to adore. She is enthroned above, as Queen and Empress and Mother, with the symbols of exclusive and universal power. Below her, she permitted the world to see the glories of her earthly life; — the Annunciation, Visitation, and Nativity; the Magi; King Herod; the Journey to Egypt; and the single medallion, which shows the gods of Egypt falling from their pedestals at her coming, is more entertaining than a whole picture-gallery of oil paintings.

In all France there exist barely a dozen good specimens of twelfth-century glass. Besides these windows at Chartres and the fragments at Saint-Denis, there are windows at Le Mans and Angers and bits at Vendôme, Chalons, Poitiers, Rheims, and

Bourges; here and there one happens on other pieces, but the earliest is the best, because the glassmakers were new at the work and spent on it an infinite amount of trouble and money which they found to be unnecessary as they gained experience. Even in 1200 the value of these windows was so well understood, relatively to new ones, that they were preserved with the greatest care. The effort to make such windows was never repeated. Their jewelled perfection did not suit the scale of the vast churches of the thirteenth century. By turning your head toward the windows of the side aisles, you can see the criticism which the later artists passed on the old work. They found it too refined, too brilliant, too jewel-like for the size of the new cathedral; the play of light and colour allowed the eye too little repose; indeed, the eye could not see their whole beauty, and half their value was thrown away in this huge stone setting. At best they must have seemed astray on the bleak, cold,windy plain of Beauce — homesick for Palestine or Cairo — yearning for Monreale or Venice — but this is not our affair, and, under the protection of the Empress Virgin, Saint Bernard himself could have afforded to sin even to drunkenness of colour. With trifling expense of imagination one can still catch a glimpse of the crusades in the glory of the glass. The longer one looks into it, the more overpowering it becomes, until one begins almost to feel an echo of what our two hundred and fifty million arithmetical ancestors, drunk with the passion of youth and the splendour of the Virgin, have been calling to us from Mont-Saint-Michel and Chartres. No words and no wine could revive their emotions so vividly as they glow in the purity of the colours; the limpidity of the blues; the depth of the red; the intensity of the green; the complicated harmonies; the sparkle and splendour of the light; and the quiet and certain strength of the mass.

With too strong direct sun the windows are said to suffer, and become a cluster of jewels — a delirium of coloured light. The lines, too, have different degrees of merit. These criticisms seldom strike a chance traveller, but he invariably makes the discovery that the designs within the medallions are childish.

He may easily correct them, if he likes, and see what would happen to the window; but although this is the alphabet of art, and we are past spelling words of one syllable, the criticism teaches at least one lesson. Primitive man seems to have had a natural colour-sense, instinctive like the scent of a dog. Society has no right to feel it as a moral reproach to be told that it has reached an age when it can no longer depend, as in childhood, on its taste, or smell, or sight, or hearing, or memory; the fact seems likely enough, and in no way sinful; yet society always denies it, and is invariably angry about it; and, therefore, one had better not say it. On the other hand, we can leave Delacroix and his school to fight out the battle they began against Ingres and his school, in French art, nearly a hundred years ago, which turned in substance on the same point. Ingres held that the first motive in colour-decoration was line, and that a picture which was well drawn was well enough coloured. Society seemed, on the whole, to agree with him. Society in the twelfth century agreed with Delacroix. The French held then that the first point in colour-decoration was colour, and they never hesitated to put their colour where they wanted it, or cared whether a green camel or a pink lion looked like a dog or a donkey provided they got their harmony or value. Everything except colour was sacrificed to line in the large sense, but details of drawing were conventional and subordinate. So we laugh to see a knight with a blue face, on a green horse, that looks as though drawn by a four-year-old child, and probably the artist laughed, too; but he was a colourist, and never sacrificed his colour for a laugh.

We tourists assume commonly that he knew no better. In our simple faith in ourselves, great hope abides, for it shows an earnestness hardly less than that of the crusaders; but in the matter of colour one is perhaps less convinced, or more open to curiosity. No school of colour exists in our world today, while the Middle Ages had a dozen; but it is certainly true that these twelfth-century windows break the French tradition. They had no antecedent, and no fit succession. All the authorities dwell on their exceptional character. One is sorely tempted to suspect

hat they were in some way an accident; that such an art could not have sprung, in such perfection, out of nothing, had it been really French; that it must have had its home elsewhere — on the Rhine — in Italy — in Byzantium — or in Bagdad.

The same controversy has raged for near two hundred years over the Gothic arch, and everything else mediaeval, down to the philosophy of the schools. The generation that lived during the first and second crusades tried a number of original experiments, besides capturing Jerusalem. Among other things, it produced the western portal of Chartres, with its statuary, its glass, and its flèche, as a by-play; as it produced Abélard, Saint Bernard, and Christian of Troyes, whose acquaintance we have still to make. It took ideas wherever it found them; — from Germany, Italy, Spain, Constantinople, Palestine, or from the source which has always attracted the French mind like a magnet — from ancient Greece. That it actually did take the ideas, no one disputes, except perhaps patriots who hold that even the ideas were original; but to most students the ideas need to be accounted for less than the taste with which they were handled, and the quickness with which they were developed. That the taste was French, you can see in the architecture, or you will see if ever you meet the Gothic elsewhere; that it seized and developed an idea quickly, you have seen in the arch, the flèche, the porch, and the windows, as well as in the glass; but what we do not comprehend, and never shall, is the appetite behind all this; the greed for novelty: the fun of life. Every one who has lived since the sixteenth century has felt deep distrust of every one who lived before it, and of every one who believed in the Middle Ages. True it is that the last thirteenth-century artist died a long time before our planet began its present rate of revolution; it had to come to rest, and begin again; but this does not prevent astonishment that the twelfth-century planet revolved so fast. The pointed arch not only came as an idea into France, but it was developed into a system of architecture and covered the country with buildings on a scale of height never before attempted except by the dome, with an expenditure of wealth that would make a railway

system look cheap, all in a space of about fifty years; the glass came with it, and went with it, at least as far as concerns us; but, if you need other evidence, you can consult Renan, who is the highest authority: 'One of the most singular phenomena of the literary history of the Middle Ages,' says Renan of Averroës, 'is the activity of the intellectual commerce, and the rapidity with which books were spread from one end of Europe to the other. The philosophy of Abélard during his lifetime (1100–42) had penetrated to the ends of Italy. The French poetry of the trouvères counted within less than a century translations into German, Swedish, Norwegian, Icelandic, Flemish, Dutch, Bohemian, Italian, Spanish'; and he might have added that England needed no translation, but helped to compose the poetry, not being at that time so insular as she afterwards became. 'Such or such a work, composed in Morocco or in Cairo, was known at Paris and at Cologne in less time than it would need in our days for a German book of capital importance to pass the Rhine'; and Renan wrote this in 1852 when German books of capital importance were revolutionizing the literary world.

One is apt to forget the smallness of Europe, and how quickly it could always be crossed. In summer weather, with fair winds, one can sail from Alexandria or from Syria, to Sicily, or even to Spain and France, in perfect safety and with ample room for freight, as easily now as one could do it then, without the aid of steam; but one does not now carry freight of philosophy, poetry, or art. The world still struggles for unity, but by different methods, weapons, and thought. The mercantile exchanges which surprised Renan, and which have puzzled historians, were in ideas. The twelfth century was as greedy for them in one shape as the nineteenth century in another. France paid for them dearly, and repented for centuries; but what creates surprise to the point of incredulity is her hunger for them, the youthful gluttony with which she devoured them, the infallible taste with which she dressed them out. The restless appetite that snatched at the pointed arch, the stone flèche, the coloured glass, the illuminated missal, the chanson and roman and

astorelle, the fragments of Aristotle, the glosses of Avicenne, was nothing compared with the genius which instantly gave form and flower to them all.

This episode merely means that the French twelfth-century artist may be supposed to have known his business, and if he produced a grotesque, or a green-faced Saint, or a blue castle, or a syllogism, or a song, that he did it with a notion of the effect he had in mind. The glass window was to him a whole — a mass — and its details were his amusement; for the twelfth-century Frenchman enjoyed his fun, though it was sometimes rather heavy for modern French taste, and less refined than the Church liked. These three twelfth-century windows, like their contemporary portal outside, and the flèche that goes with them, are the ideals of enthusiasts of mediaeval art; they are above the level of all known art, in religious form; they are inspired; they are divine! This is the claim of Chartres and its Virgin. Actually, the French artist, whether architect, sculptor, or painter in glass, did rise here above his usual level. He knew it when he did it, and probably he attributed it, as we do, to the Virgin; for these works of his were hardly fifty years old when the rest of the old church was burned; and already the artist felt the virtue gone out of him. He could not do so well in 1200 as he did in 1150; and the Virgin was not so near.

The proof of it — or, if you prefer to think so, the proof against it — is before our eyes on the wall above the lancet windows. When Villard de Honnecourt came to Chartres, he seized at once on the western rose as his study, although the two other roses were probably there, in all their beauty and lightness. He saw in the western rose some quality of construction which interested him; and, in fact, the western rose is one of the flowers of architecture which reveals its beauties slowly without end; but its chief beauty is the feeling which unites it with the portal, the lancets, and the flèche. The glassworker here in the interior had the same task to perform. The glass of the lancets was fifty years old when the glass for the rose was planned; perhaps it was seventy, for the exact dates are unknown, but it does not matter, for the greater the interval, the more interesting is the treatment.

Whatever the date, the glass of the western rose cannot be muc
earlier or much later than that of the other roses, or that of th
choir, and yet you see at a glance that it is quite different
treated. On such matters one must, of course, submit to th
opinion of artists, which one does the more readily becau
they always disagree; but until the artists tell us better, we ma
please ourselves by fancying that the glass of the rose was in
tended to harmonize with that of the lancets, and unite it wit
the thirteenth-century glass of the nave and transepts. Amon
all the thirteenth-century windows the western rose alone seem
to affect a rivalry in brilliancy with the lancets, and carries it s
far that the separate medallions and pictures are quite lost –
especially in direct sunshine — blending in a confused effect o
opals, in a delirium of colour and light, with a result like
cluster of stones in jewelry. Assuming as one must, in want o
the artist's instruction, that he knew what he wanted to do, an
did it, one must take for granted that he treated the rose a
a whole, and aimed at giving it harmony with the three precious
windows beneath. The effect is that of a single large ornament
a round breastpin, or what is now called a sunburst, of jewels
with three large pendants beneath.

We are ignorant tourists, liable to much error in trying to see
motives in artists who worked seven hundred years ago fo
a society which thought and felt in forms quite unlike ours, bu
the mediaeval pilgrim was more ignorant than we, and much
simpler in mind; if the idea of an ornament occurs to us, i
certainly occurred to him, and still more to the glassworker
whose business was to excite his illusions. An artist, if good fo
anything, foresees what his public will see; and what his publi
will see is what he ought to have intended — the measure of hi
genius. If the public sees more than he himself did, this is hi
credit; if less, this is his fault. No matter how simple or ignoran
we are, we ought to feel a discord or a harmony where the artis
meant us to feel it, and when we see a motive, we conclude tha
other people have seen it before us, and that it must, therefore
have been intended. Neither of the transept roses is treated lik
this one; neither has the effect of a personal ornament; neithe

treated as a jewel. No one knew so well as the artist that such reatment must give the effect of a jewel. The Roses of France nd of Dreux bear indelibly and flagrantly the character of rance and Dreux; on the western rose is stamped with greater efinement but equal decision the character of a much greater ower than either of them.

No artist would have ventured to put up, before the eyes of Mary in Majesty, above the windows so dear to her, any object hat she had not herself commanded. Whether a miracle was ecessary, or whether genius was enough, is a point of casuistry vhich you can settle with Albertus Magnus or Saint Bernard, nd which you will understand as little when settled as before; ut for us, beyond the futilities of unnecessary doubt, the Virgin esigned this rose; not perhaps in quite the same perfect spirit n which she designed the lancets, but still wholly for her own leasure and as her own idea. She placed upon the breast of er Church — which symbolized herself — a jewel so gorgeous hat no earthly majesty could bear comparison with it, and vhich no other heavenly majesty has rivalled. As one watches he light play on it, one is still overcome by the glories of the ewelled rose and its three gemmed pendants; one feels a little f the effect she meant it to produce even on infidels, Moors, nd heretics, but infinitely more on the men who feared and the vomen who adored her; — not to dwell too long upon it, one dmits that hers is the only Church. One would admit anything hat she should require. If you had only the soul of a shrimp, ou would crawl, like the Abbé Suger, to kiss her feet.

Unfortunately she is gone, or comes here now so very rarely hat we never shall see her; but her genius remains as individual ere as the genius of Blanche of Castile and Pierre de Dreux n the transepts. That the three lancets were her own taste, as istinctly as the Trianon was the taste of Louis XIV, is self-vident. They represent all that was dearest to her; her Son's lory on her right; her own beautiful life in the middle; her oyal ancestry on her left: the story of her divine right, thrice-old. The pictures are all personal, like family portraits. Above nem the man who worked in 1200 to carry out the harmony,

and to satisfy the Virgin's wishes, has filled his rose with a doz
or two little compositions in glass, which reveal their subje
only to the best powers of a binocle. Looking carefully, o
discovers at last that this gorgeous combination of all the hu
of Paradise contains or hides a Last Judgment — the one subje
carefully excluded from the old work, and probably not existi
on the south portal for another twenty years. If the scheme
the western rose dates from 1200, as is reasonable to suppose, th
Last Judgment is the oldest in the church, and makes a lir
between the theology of the first crusade, beneath, and th
theology of Pierre Mauclerc in the south porch. The church
man is the only true and final judge on his own doctrine, and w
neither know nor care to know the facts; but we are as goo
judges as he of the feeling, and we are at full liberty to feel tha
such a Last Judgment as this was never seen before or since b
churchman or heretic, unless by virtue of the heresy which hel
that the true Christian must be happy in being damned sinc
such is the will of God. That this blaze of heavenly light wa
intended, either by the Virgin or by her workmen, to conve
ideas of terror or pain, is a notion which the Church migh
possibly preach, but which we sinners knew to be false in th
thirteenth century as well as we know it now. Never in all thes
seven hundred years has one of us looked up at this rose withou
feeling it to be Our Lady's promise of Paradise.

Here as everywhere else throughout the church, one feels th
Virgin's presence, with no other thought than her majesty an
grace. To the Virgin and to her suppliants, as to us, wh
though outcasts in other churches can still hope in hers, the La
Judgment was not a symbol of God's justice or man's corruptio
but of her own infinite mercy. The Trinity judged, throug
Christ; — Christ loved and pardoned, through her. She wielde
the last and highest power on earth and in hell. In the glow an
beauty of her nature, the light of her Son's infinite love shon
as the sunlight through the glass, turning the Last Judgmen
itself into the highest proof of her divine and supreme authority
The rudest ruffian of the Middle Ages, when he looked at thi
Last Judgment, laughed; for what was the Last Judgment t

:r! An ornament, a plaything, a pleasure! a jewelled decora-
on which she wore on her breast! Her chief joy was to pardon;
er eternal instinct was to love; her deepest passion was pity!
n her imperial heart the flames of hell showed only the opaline
lours of heaven. Christ the Trinity might judge as much as
e pleased, but Christ the Mother would rescue; and her serv-
nts could look boldly into the flames.

If you, or even our friends the priests who still serve Mary's
rine, suspect that there is some exaggeration in this language,
will only oblige you to admit presently that there is none; but
r the moment we are busy with glass rather than with faith,
nd there is a world of glass here still to study. Technically, we
e done with it. The technique of the thirteenth century comes
aturally and only too easily out of that of the twelfth. Artisti-
lly, the motive remains the same, since it is always the Virgin;
ut although the Virgin of Chartres is always the Virgin of
Iajesty, there are degrees in the assertion of her majesty even
ere, which affect the art, and qualify its feeling. Before
epping down to the thirteenth century, one should look at
ese changes of the Virgin's royal presence.

First and most important as record is the stone Virgin on the
uth door of the western portal, which we studied, with her
yzantine Court; and the second, also in stone, is of the same
eriod, on one of the carved capitals of the portal, representing
e Adoration of the Magi. The third is the glass Virgin at the
p of the central lancet. All three are undoubted twelfth-
ntury work; and you can see another at Paris, on the same
oor of Notre Dame, and still more on Abbé Suger's window at
int-Denis, and, later, within a beautiful grisaille at Auxerre;
ut all represent the same figure; a Queen, enthroned, crowned,
ith the symbols of royal power, holding in her lap the infant
ing whose guardian she is. Without pretending to know what
ecial crown she bears, we can assume, till corrected, that it is
e Carlovingian imperial, not the Byzantine. The Trinity
owhere appears except as implied in the Christ. At the ut-
ost, a mystic hand may symbolize the Father. The Virgin
represented by the artists of the twelfth century in the Île de

France and at Chartres seems to be wholly French in spite of the Greek atmosphere of her workmanship. One might almost insist that she is blonde, full in face, large in figure, dazzlingly beautiful, and not more than thirty years of age. The Child never seems to be more than five.

You are equally free to see a Southern or Eastern type in her face, and perhaps the glass suggests a dark type, but the face of the Virgin on the central lancet is a fourteenth-century restoration which may or may not reproduce the original, while all the other Virgins represented in glass, except one, belong to the thirteenth century. The possible exception is a well-known figure called Notre-Dame-de-la-Belle-Verrière in the choir next the south transept. A strange, almost uncanny feeling seems to haunt this window, heightened by the veneration in which it was long held as a shrine, though it is now deserted for Notre-Dame-du-Pilier on the opposite side of the choir. The charm is partly due to the beauty of the scheme of the angels, supporting, saluting, and incensing the Virgin and Child with singular grace and exquisite feeling, but rather that of the thirteenth than of the twelfth century. Here, too, the face of the Virgin is not ancient. Apparently the original glass was injured by time or accident, and the colours were covered or renewed by a simple drawing in oil. Elsewhere the colour is thought to be particularly good, and the window is a favourite mine of motives for artists to exploit, but to us its chief interest is its singular depth of feeling. The Empress Mother sits full-face, on a rich throne and dais, with the Child on her lap, repeating her attitude except that her hands support His shoulders. She wears her crown; her feet rest on a stool; and both stool, rug, robe, and throne are as rich as colour and decoration can make them. At last a dove appears, with the rays of the Holy Ghost. Imperial as the Virgin is, it is no longer quite the unlimited empire of the western lancet. The aureole encircles her head only; she holds no sceptre; the Holy Ghost seems to give her support which she did not need before, while Saint Gabriel and Saint Michael, her archangels, with their symbols of power, have disappeared. Exquisite as the angels are who

surround and bear up her throne, they assert no authority. The window itself is not a single composition; the panels below seem inserted later merely to fill up the space; six represent the Marriage of Cana, and the three at the bottom show a grotesque little demon tempting Christ in the Desert. The effect of the whole, in this angle which is almost always dark or filled with shadow, is deep and sad, as though the Empress felt her authority fail, and had come down from the western portal to reproach us for neglect. The face is haunting. Perhaps its force may be due to nearness, for this is the only instance in glass of her descending so low that we can almost touch her, and see what the twelfth century instinctively felt in the features which, even in their beatitude, were serious and almost sad under the austere responsibilities of infinite pity and power.

No doubt the window is very old, or perhaps an imitation or reproduction of one which was much older, but to the pilgrim its interest lies mostly in its personality, and there it stands alone. Although the Virgin reappears again and again in the lower windows — as in those on either side of the Belle-Verrière; in the remnant of window representing her miracles at Chartres, in the south aisle next the transept; in the fifteenth-century window of the chapel of Vendôme which follows; and in the third window which follows that of Vendôme and represents her coronation — she does not show herself again in all her majesty till we look up to the high windows above. There we shall find her in her splendour on her throne, above the high altar, and still more conspicuously in the Rose of France in the north transept. Still again she is enthroned in the first window of the choir next the north transept. Elsewhere we can see her standing, but never does she come down to us in the full splendour of her presence. Yet wherever we find her at Chartres, and of whatever period, she is always Queen. Her expression and attitude are always calm and commanding. She never calls for sympathy by hysterical appeals to our feelings; she does not even altogether command, but rather accepts the voluntary, unquestioning, unhesitating, instinctive faith, love, and devotion of mankind. She will accept ours, and we have not the heart to refuse it; we have not even the right, for we are her guests.

IX. The Legendary Windows

ONE'S first visit to a great cathedral is like one's first visi to the British Museum; the only intelligent idea is t follow the order of time, but the museum is a chaos i time, and the cathedral is generally all of one and the same time At Chartres, after finishing with the twelfth century, everythin is of the thirteenth. To catch even an order in time, one mus first know what part of the thirteenth-century church was oldes The books say it was the choir. After the fire of 1194, the pi grims used the great crypt as a church where services wer maintained; but the builders must have begun with the centra piers and the choir, because the choir was the only essentia part of the church. Nave and transepts might be suppressed but without a choir the church was useless, and in a shrin such as Chartres, the choir was the whole church. Toward th choir, then, the priest or artist looks first; and, since dates ar useful, the choir must be dated. The same popular enthusiasm which had broken out in 1145, revived in 1195 to help th rebuilding; and the work was pressed forward with the sam feverish haste, so that ten years should have been ample t provide for the choir, if for nothing more; and services may hav been resumed there as early as the year 1206; certainly in 121 Probably the windows were designed and put in hand as soo as the architect gave the measurements, and any one who in tended to give a window would have been apt to choose one o the spaces in the apse, in Mary's own presence, next the sanc tuary.

The first of the choir windows to demand a date is the Belle-Verrière, which is commonly classed as early thirteenth-century, and may go with the two windows next it, one of which — the so-called Zodiac window — bears a singularly interesting inscription: 'COMES TEOBALDUS DAT . . . AD PRECES COMITIS PTICENSIS.' If Shakespeare could write the tragedy of 'King John,' we cannot admit ourselves not to have read it, and this inscription might be a part of the play. The 'pagus perticensis' lies a short drive to the west, some fifteen or twenty miles on the road to Le Mans, and in history is known as the Comté du Perche, although its memory is now preserved chiefly by its famous breed of Percheron horses. Probably the horse also dates from the crusades, and may have carried Richard Coeur-de-Lion, but in any case the count of that day was a vassal of Richard, and one of his intimate friends, whose memory is preserved forever by a single line in Richard's prison-song:

> Mes compaignons cui j'amoie et cui j'aim,
> Ces dou Caheu et ces dou Percherain.

In 1194, when Richard Coeur-de-Lion wrote these verses, the Comte du Perche was Geoffroy III, who had been a companion of Richard on his crusade in 1192, where, according to the Chronicle, 'he shewed himself but a timid man'; which seems scarcely likely in a companion of Richard; but it is not of him that the Chartres window speaks, except as the son of Mahaut or Matilda of Champagne who was a sister of Alix of Champagne, Queen of France. The Table shows, therefore, that Geoffroi's son and successor as the Comte du Perche — Thomas — was second cousin of Louis the Lion, known as King Louis VIII of France. They were probably of much the same age.

If this were all, one might carry it in one's head for a while, but the relationship which dominates the history of this period was that of all these great ruling families with Richard Coeur-de-Lion and his brother John, nicknamed Lackland, both of whom in succession were the most powerful Frenchmen in France. The Table shows that their mother, Eleanor of Guienne, the first Queen of Louis VII, bore him two daughters, one of whom,

Alix, married, about 1164, the Count Thibaut of Chartres and Blois, while the other, Mary, married the great Count of Champagne. Both of them being half-sisters of Coeur-de-Lion and John, their children were nephews or half-nephews, indiscriminately, of all the reigning monarchs, and Coeur-de-Lion immortalized one of them by a line in his prison-song, as he immortalized Le Perche:

> Je nel di pas de celi de Chartain,
> La mere Loeis.

'Loeis,' therefore, or Count Louis of Chartres, was not only nephew of Coeur-de-Lion and John Lackland, but was also, like Count Thomas of Le Perche, a second cousin of Louis VIII. Feudally and personally he was directly attached to Coeur-de-Lion rather than to Philip Augustus.

If society in the twelfth century could follow the effects of these relationships, personal and feudal, it was cleverer than society in the twentieth; but so much is simple: Louis of France, Thibaut of Chartres, and Thomas of Le Perche, were cousins and close friends in the year 1215, and all were devoted to the Virgin of Chartres. Judging from the character of Louis's future queen, Blanche of Castile, their wives were, if possible, more devoted still; and in that year Blanche gave birth to Saint Louis, who seems to have been the most devoted of all.

Meanwhile their favourite uncle, Coeur-de-Lion, had died in the year 1199. Thibaut's great-grandmother, Eleanor of Guienne, died in 1202. King John, left to himself, rapidly accumulated enemies innumerable, abroad and at home. In 1203, Philip Augustus confiscated all the fiefs he held from the French Crown, and in 1204 seized Normandy. John sank rapidly from worse to worst, until at last the English barons rose and forced him to grant their Magna Carta at Runnimede in 1215.

The year 1215 was, therefore, a year to be remembered at Chartres, as at Mont-Saint-Michel; one of the most convenient dates in history. Every one is supposed, even now, to know what happened then, to give another violent wrench to society, like

the Norman Conquest in 1066. John turned on the barons and broke them down; they sent to France for help, and offered the crown of England to young Louis, whose father, Philip Augustus, called a council which pledged support to Louis. Naturally the Comte du Perche and the Comte de Chartres must have pledged their support, among the foremost, to go with Louis to England. He was then twenty-nine years old; they were probably somewhat younger.

The Zodiac window, with its inscription, was the immediate result. The usual authority that figures in the histories is Roger of Wendover, but much the more amusing for our purpose is a garrulous Frenchman known as the Ménestrel de Rheims who wrote some fifty years later. After telling in his delightful thirteenth-century French, how the English barons sent hostages to Louis, 'et mes sires Loueys les fit bien gardeir et honourablement,' the Ménestrel continued:

> Et assembla granz genz par amours, et par deniers, et par lignage. Et fu avec lui li cuens dou Perche, et li cuens de Montfort, et li cuens de Chartres, et li cuens de Monbleart, et mes sires Enjorrans de Couci, et mout d'autre grant seigneur dont je ne parole mie.

The Comte de Chartres, therefore, may be supposed to have gone with the Comte du Perche, and to have witnessed the disaster at Lincoln which took place May 20, 1217, after King John's death:

> Et li cuens dou Perche faisait l'avantgarde, et courut tout leiz des portes; et la garnisons de laienz issi hors et leur coururent sus; et i ot asseiz trait et lancié; et chevaus morz et chevaliers abatuz, et gent à pié morz et navreiz. Et li cuens dou Perche i fu morz par un ribaut qui li leva le pan dou hauberc, et l'ocist d'un coutel; et fu desconfite l'avantgarde par la mort le conte. Et quant mes sires Loueys le sot, si ot graigneur duel qu'il eust onques, car il estoit ses prochains ami de char.

Such language would be spoiled by translation. For us it is enough to know that the 'ribaut' who lifted the 'pan,' or skirt, of the Count's 'hauberc' or coat-of-mail, as he sat on his horse

refusing to surrender to English traitors, and stabbed him from below with a knife, may have been an invention of the Ménestrel; or the knight who pierced with his lance through the visor to the brain, may have been an invention of Roger of Wendover; but in either case, Count Thomas du Perche lost his life at Lincoln, May 20, 1217, to the deepest regret of his cousin Louis the Lion as well as of the Count Thibaut of Chartres, whom he charged to put up a window for him in honour of the Virgin.

The window must have been ordered at once, because Count Thibaut, 'le Jeune ou le Lépreux,' died himself within a year, April 22, 1218, thus giving an exact date for one of the choir windows. Probably it was one of the latest, because the earliest to be provided would have been certainly those of the central apsidal chapel. According to the rule laid down by Viollet-le-Duc, the windows in which blue strongly predominates, like the Saint Sylvester, are likely to be earlier than those with a prevailing tone of red. We must take for granted that some of these great legendary windows were in place as early as 1210, because, in October of that year, Philip Augustus attended mass here. There are some two dozen of these windows in the choir alone, each of which may well have represented a year's work in the slow processes of that day, and we can hardly suppose that the workshops of 1200 were on a scale such as to allow of more than two to have been in hand at once. Thirty or forty years later, when the Sainte Chapelle was built, the workshops must have been vastly enlarged, but with the enlargement, the glass deteriorated. Therefore, if the architecture were so far advanced in the year 1200 as to allow of beginning work on the glass, in the apse, the year 1225 is none too late to allow for its completion in the choir.

Dates are stupidly annoying; — what we want is not dates but taste; — yet we are uncomfortable without them. Except the Perche window, none of the lower ones in the choir helps at all; but the clerestory is more useful. There they run in pairs, each pair surmounted by a rose. The first pair (numbers 27 and 28) next the north transept, shows the Virgin of France, supported, according to the Abbés Bulteau and Clerval, by

the arms of Bishop Reynault de Mouçon, who was Bishop of Chartres at the time of the great fire in 1194 and died in 1217. The window number 28 shows two groups of peasants on pilgrimage; below, on his knees, Robert of Berou, as donor: 'Robertus de Berou: Carn. Cancellarius.' The Cartulary of the Cathedral contains an entry (Bulteau, i, 123): 'The 26th February, 1216, died Robert de Berou, Chancellor, who has given us a window.' The Cartulary mentions several previous gifts of windows by canons or other dignitaries of the Church in the year 1215.

Next follow, or once followed, a pair of windows (numbers 29 and 30) which were removed by the sculptor Bridan, in 1788, in order to obtain light for his statuary below. The donor was 'Domina Johannes Baptista,' who, we are told, was Jeanne de Dammartin; and the window was given in memory, or in honour, of her marriage to Ferdinand of Castile in 1237. Jeanne was a very great lady, daughter of the Comte d'Aumale and Marie de Ponthieu. Her father affianced her in 1235 to the King of England, Henry III, and even caused the marriage to be celebrated by proxy, but Queen Blanche broke it off, as she had forbidden, in 1231, that of Yolande of Brittany. She relented so far as to allow Jeanne in 1237 to marry Ferdinand of Castile, who still sits on horseback in the next rose: 'Rex Castillae.' He won the crown of Castile in 1217 and died in 1252, when Queen Jeanne returned to Abbéville and then, at latest, put up this window at Chartres in memory of her husband.

The windows numbers 31 and 32 are the subject of much dispute, but whether the donors were Jean de Chatillon or the three children of Thibaut le Grand of Champagne, they must equally belong to the later series of 1260–70, rather than to the earlier of 1210–20. The same thing is or was true of the next pair, numbers 33 and 34, which were removed in 1773, but the record says that at the bottom of number 34 was the figure of Saint Louis's son, Louis of France, who died in 1260, before his father, who still rides in the rose above.

Thus the north side of the choir shows a series of windows that

precisely cover the lifetime of Saint Louis (1215–70). The south side begins, next the apse, with windows numbers 35 and 36, which belong, according to the Comte d'Armancourt, to the family of Montfort, whose ruined castle crowns the hill of Montfort l'Amaury, on the road to Paris, some forty kilometres northeast of Chartres. Every one is supposed to know the story of Simon de Montfort who was killed before Toulouse in 1218. Simon left two sons, Amaury and Simon. The sculptor Bridan put an end also to the window of Amaury, but in the rose, Amaury, according to the Abbés, still rides on a white horse. Amaury's history is well known. He was made Constable of France by Queen Blanche in 1231; went on crusade in 1239; was captured by the infidels, taken to Babylon, ransomed, and in returning to France, died at Otranto in 1241. For that age Amaury was but a commonplace person, totally overshadowed by his brother Simon, who went to England, married King John's daughter Eleanor, and became almost king himself as Earl of Leicester. At your leisure you can read Matthew Paris's dramatic account of him and of his death at the battle of Evesham, August 5, 1265. He was perhaps the last of the very great men of the thirteenth century, excepting Saint Louis himself, who lived a few years longer. M. d'Armancourt insists that it is the great Earl of Leicester who rides with his visor up, in full armour, on a brown horse, in the rose above the windows numbers 37 and 38. In any case, the windows would be later than 1240.

The next pair of windows, numbers 39 and 40, also removed in 1788, still offer, in their rose, the figure of a member of the Courtenay family. Gibbon was so much attracted by the romance of the Courtenays as to make an amusing digression on the subject which does not concern us or the cathedral except so far as it tells us that the Courtenays, like so many other benefactors of Chartres Cathedral, belonged to the royal blood. Louis-le-Gros, who died in 1137, besides his son Louis-le-Jeune, who married Eleanor of Guienne in that year, had a younger son, Pierre, whom he married to Isabel de Courtenay, and who, like Philip Hurepel, took the title of his wife. Pierre had a son,

Pierre II, who was a cousin of Philip Augustus, and became the hero of the most lurid tragedy of the time. Chosen Emperor of Constantinople in 1216, to succeed his brothers-in-law Henry and Baldwin, he tried to march across Illyria and Macedonia, from Durazzo opposite Brindisi, with a little army of five thousand men, and instantly disappeared forever. The Epirotes captured him in the summer of 1217, and from that moment nothing is known of his fate.

On the whole, this catastrophe was perhaps the grimmest of all the Shakespearean tragedies of the thirteenth century; and one would like to think that the Chartres window was a memorial of this Pierre, who was a cousin of France and an emperor without empire; but M. d'Armancourt insists that the window was given in memory not of this Pierre, but of his nephew, another Pierre de Courtenay, Seigneur de Conches, who went on crusade with Saint Louis in 1249 to Egypt, and died shortly before the defeat and captivity of the King, on February 8, 1250. His brother Raoul, Seigneur d'Illiers, who died in 1271, is said to be donor of the next window, number 40. The date of the Courtenay windows should therefore be no earlier than the death of Saint Louis in 1270; yet one would like to know what has become of another Courtenay window left by the first Pierre's son-in-law, Gaucher or Gaultier of Bar-sur-Seine, who seems to have been Vicomte de Chartres, and who, dying before Damietta in 1218, made a will leaving to Notre Dame de Chartres thirty silver marks, 'de quibus fieri debet miles montatus super equum suum.' Not only would this mounted knight on horseback supply an early date for these interesting figures, but would fix also the cost, for a mark contained eight ounces of silver, and was worth ten sous, or half a livre. We shall presently see that Aucassins gave twenty sous, or a livre, for a strong ox, so that the 'miles montatus super equum suum' in glass was equivalent to fifteen oxen if it were money of Paris, which is far from certain.

This is an economical problem which belongs to experts, but the historical value of these early evidences is still something — perhaps still as much as ten sous. All the windows tend to the

same conclusion. Even the last pair, numbers 41 and 42, offer three personal clues which lead to the same result: the arms of Bouchard de Marly who died in 1226, almost at the same time as Louis VIII; a certain Colinus or Colin, 'de camera Regis,' who was alive in 1225; and Robert of Beaumont in the rose, who seems to be a Beaumont of Le Perche, of whom little or nothing is as yet certainly known. As a general rule, there are two series of windows, one figuring the companions or followers of Louis VIII (1215–26); the other, friends or companions of Saint Louis (1226–70), Queen Blanche uniting both. What helps to hold the sequences in a certain order, is that the choir was complete, and services regularly resumed there, in 1210, while in 1220 the transept and nave were finished and vaulted. For the apside windows, therefore, we will assume, subject to correction, a date from 1200 to 1225 for their design and workmanship; for the transept, 1220 to 1236; and for the nave a general tendency to the actual reign of Saint Louis from 1236 to 1270. Since there is a deal of later glass scattered everywhere among the earlier, the margin of error is great; but by keeping the reign of Louis VIII and its personages distinct from that of Louis IX and his generation, we can be fairly sure of our main facts. Meanwhile the Sainte Chapelle in Paris, wholly built and completed between 1240 and 1248, offers a standard of comparison for the legendary windows.

The choir of Chartres is as long as the nave, and much broader, besides that the apse was planned with seven circular projections which greatly increased the window space, so that the guidebook reckons thirty-seven windows. A number of these are grisailles, and the true amateur of glass considers the grisailles to be as well worth study as the legendary windows. They are a decoration which has no particular concern with churches, and no distinct religious meaning, but, it seems, a religious value which Viollet-le-Duc is at some trouble to explain; and, since his explanation is not very technical, we can look at it, before looking at the legends:

> The colouration of the windows had the advantage of throwing on the opaque walls a veil, or coloured glazing, of extreme delicacy,

always assuming that the coloured windows themselves were harmoniously toned. Whether their resources did not permit the artists to adopt a complete system of coloured glass, or whether they wanted to get daylight in purer quality into their interiors — whatever may have been their reasons — they resorted to this beautiful grisaille decoration which is also a colouring harmony obtained by the aid of a long experience in the effects of light on translucent surfaces. Many of our churches retain grisaille windows filling either all, or only a part, of their bays. In the latter case, the grisailles are reserved for the side windows which are meant to be seen obliquely, and in that case the coloured glass fills the bays of the fond, the apsidal openings which are meant to be seen in face from a distance. These lateral grisailles are still opaque enough to prevent the solar rays which pass through them from lighting the coloured windows on the reverse side; yet, at certain hours of the day, these solar rays throw a pearly light on the coloured windows which gives them indescribable transparence and refinement of tones. The lateral windows in the choir of the Auxerre Cathedral, half-grisaille, half-coloured, throw on the wholly coloured apsidal window, by this means, a glazing the softness of which one can hardly conceive. The opaline light which comes through these lateral bays, and makes a sort of veil, transparent in the extreme, under the lofty vaulting, is crossed by the brilliant tones of the windows behind, which give the play of precious stones. The solid outlines then seem to waver like objects seen through a sheet of clear water. Distances change their values, and take depths in which the eye gets lost. With every hour of the day these effects are altered, and always with new harmonies which one never tires of trying to understand; but the deeper one's study goes, the more astounded one becomes before the experience acquired by these artists, whose theories on the effects of colour, assuming that they had any, are unknown to us and whom the most kindly-disposed among us treat as simple children.

You can read the rest for yourselves. Grisaille is a separate branch of colour-decoration which belongs with the whole system of lighting and fenêtrage, and will have to remain a closed book because the feeling and experience which explained it once are lost, and we cannot recover either. Such things must have been always felt rather than reasoned, like

the irregularities in plan of the builders; the best work of the best times shows the same subtlety of sense as the dog shows in retrieving, or the bee in flying, but which tourists have lost. All we can do is to note that the grisailles were intended to have values. They were among the refinements of light and colour with which the apse of Chartres is so crowded that one must be content to feel what one can, and let the rest go.

Understand, we cannot! nothing proves that the greatest artists who ever lived have, in a logical sense, understood! or that omnipotence has ever understood! or that the utmost power of expression has ever been capable of expressing more than the reaction of one energy on another, but not of two on two; and when one sits here, in the central axis of this complicated apse, one sees, in mere light alone, the reaction of hundreds of energies, although time has left only a wreck of what the artist put here. One of the best window spaces is wholly filled up by the fourteenth-century doorway to the chapel of Saint Piat, and only by looking at the two windows which correspond on the north does a curious inquirer get a notion of the probable loss. The same chapel more or less blocks the light of three other principal windows. The sun, the dust, the acids of dripping water, and the other works of time, have in seven hundred years corroded or worn away or altered the glass, especially on the south side. Windows have been darkened by time and mutilated by wilful injury. Scores of the panels are wholly restored, modern reproductions or imitations. Even after all this loss, the glass is probably the best-preserved, or perhaps the only preserved part of the decoration in colour, for we never shall know the colour-decoration of the vaults, the walls, the columns, or the floors. Only one point is fairly sure; — that on festivals, if not at other times, every foot of space was covered in some way or another, throughout the apse, with colour; either paint or tapestry or embroidery or Byzantine brocades and Oriental stuffs or rugs, lining the walls, covering the altars, and hiding the floor. Occasionally you happen upon illuminated manuscripts showing the interiors of chapels with their colour-decoration; but everything has perished here except the glass.

If one may judge from the glass of later centuries, the first impression from the thirteenth-century windows ought to be disappointment. You should find them too effeminate, too soft, too small, and above all not particularly religious. Indeed, except for the nominal subjects of the legends, one sees nothing religious about them; the medallions, when studied with the binocle, turn out to be less religious than decorative. Saint Michael would not have felt at home here, and Saint Bernard would have turned from them with disapproval; but when they were put up, Saint Bernard was long dead, and Saint Michael had yielded his place to the Virgin. This apse is all for her. At its entrance she sat, on either side, in the Belle-Verrière or as Our Lady of the Pillar, to receive the secrets and the prayers of suppliants who wished to address her directly in person; there she bent down to our level, resumed her humanity, and felt our griefs and passions. Within, where the cross-lights fell through the wide columned space behind the high altar, was her withdrawing room, where the decorator and builder thought only of pleasing her. The very faults of the architecture and effeminacy of taste witness the artists' object. If the glass-workers had thought of themselves or of the public or even of the priests, they would have strained for effects, strong masses of colour, and striking subjects to impress the imagination. Nothing of the sort is even suggested. The great, awe-inspiring mosaic figure of the Byzantine half-dome was a splendid religious effect, but this artist had in his mind an altogether different thought. He was in the Virgin's employ; he was decorating her own chamber in her own palace; he wanted to please her; and he knew her tastes, even when she did not give him her personal orders. To him, a dream would have been an order. The salary of the twelfth-century artist was out of all relation with the percentage of a twentieth-century decorator. The artist of 1200 was probably the last who cared little for the baron, not very much for the priest, and nothing for the public, unless he happened to be paid by the guild, and then he cared just to the extent of his hire, or, if he was himself a priest, not even for that. His pay was mostly of a different kind, and was

the same as that of the peasants who were hauling the stone from the quarry at Berchères while he was firing his ovens. His reward was to come when he should be promoted to decorate the Queen of Heaven's palace in the New Jerusalem, and he served a mistress who knew better than he did what work was good and what was bad, and how to give him his right place. Mary's taste was infallible; her knowledge like her power had no limits; she knew men's thoughts as well as acts, and could not be deceived. Probably, even in our own time, an artist might find his imagination considerably stimulated and his work powerfully improved if he knew that anything short of his best would bring him to the gallows, with or without trial by jury; but in the twelfth century the gallows was a trifle; the Queen hardly considered it a punishment for an offence to her dignity. The artist was vividly aware that Mary disposed of hell.

All this is written in full, on every stone and window of this apse, as legible as the legends to any one who cares to read. The artists were doing their best, not to please a swarm of flat-eared peasants or slow-witted barons, but to satisfy Mary, the Queen of Heaven, to whom the Kings and Queens of France were coming constantly for help, and whose absolute power was almost the only restraint recognized by Emperor, Pope, and clown. The colour-decoration is hers, and hers alone. For her the lights are subdued, the tones softened, the subjects selected, the feminine taste preserved. That other great ladies interested themselves in the matter, even down to its technical refinements, is more than likely; indeed, in the central apside chapel, suggesting the Auxerre grisaille that Viollet-le-Duc mentioned, is a grisaille which bears the arms of Castile and Queen Blanche; further on, three other grisailles bear also the famous castles, but this is by no means the strongest proof of feminine taste. The difficulty would be rather to find a touch of certainly masculine taste in the whole apse.

Since the central apside chapel is the most important, we can begin with the windows there, bearing in mind that the subject of the central window was the Life of Christ, dictated by rule or custom. On Christ's left hand is the window of Saint

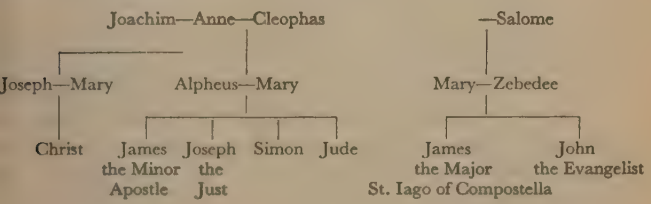
Peter; next him is Saint Paul. All are much restored; thirty-three of the medallions are wholly new. Opposite Saint Peter, at Christ's right hand, is the window of Saint Simon and Saint Jude; and next is the grisaille with the arms of Castile. If these windows were ordered between 1205 and 1210, Blanche, who was born in 1187, and married in 1200, would have been a young princess of twenty or twenty-five when she gave this window in grisaille to regulate and harmonize and soften the lighting of the Virgin's boudoir. The central chapel must be taken to be the most serious, the most studied, and the oldest of the chapels in the church, above the crypt. The windows here should rank in importance next to the lancets of the west front which are only about sixty years earlier. They show fully that difference.

Here one must see for one's self. Few artists know much about it, and still fewer care for an art which has been quite dead these four hundred years. The ruins of Nippur would hardly be more intelligible to the ordinary architect of English tradition than these twelfth-century efforts of the builders of Chartres. Even the learning of Viollet-le-Duc was at fault in dealing with a building so personal as this, the history of which is almost wholly lost. This central chapel must have been meant to give tone to the apse, and it shows with the colour-decoration of a queen's salon, a subject-decoration too serious for the amusement of heretics. One sees at a glance that the subject-decoration was inspired by church-custom, while colour was an experiment and the decorators of this enormous window space were at liberty as colourists to please the Countess of Chartres and the Princess Blanche and the Duchess of Brittany, without much regarding the opinions of the late Bernard of Clairvaux or even Augustine of Hippo, since the great ladies of the Court knew better than the Saints what would suit the Virgin.

The subject of the central window was prescribed by tradition. Christ is the Church, and in this church he and his Mother are one; therefore the life of Christ is the subject of the central window, but the treatment is the Virgin's, as the colours

show, and as the absence of every influence but hers, including the Crucifixion, proves officially. Saint Peter and Saint Paul are in their proper place as the two great ministers of the throne who represent the two great parties in western religion, the Jewish and the Gentile. Opposite them, balancing by their family influence the weight of delegated power, are two of Mary's nephews, Simon and Jude; but this subject branches off again to matters so personal to Mary that Simon and Jude require closer acquaintance. One must study a new guidebook — the 'Golden Legend,' by the blessed James, Bishop of Genoa and member of the order of Dominic, who was born at Varazze or Voragio in almost the same year that Thomas was born at Aquino, and whose 'Legenda Aurea,' written about the middle of the thirteenth century, was more popular history than the Bible itself, and more generally consulted as authority. The decorators of the thirteenth century got their motives quite outside the Bible, in sources that James of Genoa compiled into a volume almost as fascinating as the 'Fioretti of Saint Francis.'

According to the 'Golden Legend' and the tradition accepted in Jerusalem by pilgrims and crusaders, Mary's family connection was large. It appears that her mother Anne was three times married, and by each husband had a daughter Mary, so that there were three Marys, half-sisters.



Simon and Jude were, therefore, nephews of Mary and cousins of Christ, whose lives were evidence of the truth not merely of Scripture, but specially of the private and family distinction of their aunt, the Virgin Mother of Christ. They were selected, rather than their brothers, or cousins James and

John, for the conspicuous honour of standing opposite Pete and Paul, doubtless by reason of some merit of their own, bu perhaps also because in art the two counted as one, and there fore the one window offered two witnesses, which allowed th artist to insert a grisaille in place of another legendary windo to complete the chapel on their right. According to Viollet-le Duc, the grisaille in this position regulates the light and s completes the effect.

If custom prescribed a general rule for the central chapel, i seems to have left great freedom in the windows near by. A Chartres the curved projection that contains the next tw windows was not a chapel, but only a window-bay, for the sak of the windows, and, if the artists aimed at pleasing the Virgin they would put their best work there. At Bourges in the same relative place are three of the best windows in the building the Prodigal Son, the New Alliance and the Good Samaritan all of them full of life, story, and colour, with little reference t a worship or a saint. At Chartres the choice is still more strik ing, and the windows are also the best in the building, after the twelfth-century glass of the west front. The first, which comes next to Blanche's grisaille in the central chapel, is given t another nephew of Mary and apostle of Christ, Saint James the Major, whose life is recorded in the proper Bible Diction aries, with a terminal remark as follows:

> For legends respecting his death and his connections with Spain, see the Roman Breviary, in which the healing of a paralytic and the conversion of Hermogenes are attributed to him, and where it is asserted that he preached the Gospel in Spain, and that his remains were translated to Compostella. . . . As there is no shadow of foundation for any of the legends here referred to, we pass them by without further notice. Even Baronius shows himself ashamed of them. . . .

If the learned Baronius thought himself required to show shame for all the legends that pass as history, he must have suffered cruelly during his laborious life, and his sufferings would not have been confined to the annals of the Church; but

the historical accuracy of the glass windows is not our affair, nor are historians especially concerned in the events of the Virgin's life, whether recorded or legendary. Religion is, or ought to be, a feeling, and the thirteenth-century windows are original documents, much more historical than any recorded in the Bible, since their inspiration is a different thing from their authority. The true life of Saint James or Saint Jude or any other of the apostles, did not, in the opinion of the ladies in the Court of France, furnish subjects agreeable enough to decorate the palace of the Queen of Heaven; and that they were right, any one must feel, who compares these two windows with subjects of dogma. Saint James, better known as Santiago of Compostella, was a compliment to the young Dauphine — before Dauphines existed — the Princess Blanche of Castile, whose arms, or castles, are on the grisaille window next to it. Perhaps she chose him to stand there. Certainly her hand is seen plainly enough throughout the church to warrant suspecting it here. As a nephew, Saint James was dear to the Virgin, but, as a friend to Spain, still more dear to Blanche, and it is not likely that pure accident caused three adjacent windows to take a Spanish tone.

The Saint James in whom the thirteenth century delighted, and whose windows one sees at Bourges, Tours, and wherever the scallop-shell tells of the pilgrim, belongs not to the Bible but to the 'Golden Legend.' This window was given by the Merchant Tailors whose signature appears at the bottom, in the corners, in two pictures that paint the tailor's shop of Chartres in the first quarter of the thirteenth century. The shop-boy takes cloth from chests for his master to show to customers, and to measure off by his ell. The story of Saint James begins in the lower panel, where he receives his mission from Christ. Above, on the right, he seems to be preaching. On the left appears a figure which tells the reason for the popularity of the story. It is Almogenes, or in the Latin, Hermogenes, a famous magician in great credit among the Pharisees, who has the command of demons, as you see, for behind his shoulder, standing, a little demon is perched, while

he orders his pupil Filetus to convert James. Next, James is shown in discussion with a group of listeners. Filetus gives him a volume of false doctrine. Almogenes then further instructs Filetus. James is led away by a rope, curing a paralytic as he goes. He sends his cloak to Filetus to drive away the demon. Filetus receives the cloak, and the droll little demon departs in tears. Almogenes, losing his temper, sends two demons, with horns on their heads and clubs in their hands, to reason with James; who sends them back to remonstrate with Almogenes. The demons then bind Almogenes and bring him before James, who discusses differences with him until Almogenes burns his books of magic and prostrates himself before the Saint. Both are then brought before Herod, and Almogenes breaks a pretty heathen idol, while James goes to prison. A panel comes in here, out of place, showing Almogenes enchanting Filetus, and the demon entering into possession of him. Then Almogenes is seen being very roughly handled by a young Jew, while the bystanders seem to approve. James next makes Almogenes throw his books of magic into the sea; both are led away to execution, curing the infirm on their way; their heads are cut off; and, at the top, God blesses the orb of the world.

That this window was intended to amuse the Virgin seems quite as reasonable an idea as that it should have been made to instruct the people, or us. Its humour was as humorous then as now, for the French of the thirteenth century loved humour even in churches, as their grotesques proclaim. The Saint James window is a tale of magic, told with the vivacity of a fabliau; but if its motive of amusement seems still a forced idea, we can pass on, at once, to the companion window which holds the best position in the church, where, in the usual cathedral, one expects to find Saint John or some other apostle; or Saint Joseph; or a doctrinal lesson such as that called the New Alliance where the Old and New Testaments are united. The window which the artists have set up here is regarded as the best of the thirteenth-century windows, and is the least religious.

The subject is nothing less than the 'Chanson de Roland' in

pictures of coloured glass, set in a border worth comparing at leisure with the twelfth-century borders of the western lancets. Even at Chartres, the artists could not risk displeasing the Virgin and the Church by following a wholly profane work like the 'Chanson' itself, and Roland had no place in religion. He could be introduced only through Charlemagne, who had almost as little right there as he. The twelfth century had made persistent efforts to get Charlemagne into the Church, and the Church had made very little effort to keep him out; yet by the year 1200, Charlemagne had not been sainted except by the anti-Pope Pascal III in 1165, although there was a popular belief, supported in Spain by the necessary documents, that Pope Calixtus II in 1122 had declared the so-called Chronicle of Archbishop Turpin to be authentic. The Bishop of Chartres in 1200 was very much too enlightened a prelate to accept the Chronicle or Turpin or Charlemagne himself, still less Roland and Thierry, as authentic in sanctity; but if the young and beautiful Dauphine of France, and her cousins of Chartres, and their artists, warmly believed that the Virgin would be pleased by the story of Charlemagne and Roland, the Bishop might have let them have their way in spite of the irregularity. That the window was an irregularity, is plain; that it has always been immensely admired, is certain; and that Bishop Renaud must have given his assent to it, is not to be denied.

The most elaborate account of this window can be found in Mâle's 'Art Religieux' (pp. 444–50). Its feeling or motive is quite another matter, as it is with the statuary on the north porch. The Furriers or Fur Merchants paid for the Charlemagne window, and their signature stands at the bottom, where a merchant shows a fur-lined cloak to his customer. That Mary was personally interested in furs, no authority seems to affirm, but that Blanche and Isabel and every lady of the Court, as well as every king and every count, in that day, took keen interest in the subject, is proved by the prices they paid, and the quantities they wore. Not even the Merchant Tailors had a better standing at Court than the Furriers, which may account for their standing so near the Virgin. Whatever the

cause, the Furriers were allowed to put their signature here, side by side with the Tailors, and next to the Princess Blanche. Their gift warranted it. Above the signature, in the first panel, the Emperor Constantine is seen, asleep, in Constantinople, on an elaborate bed, while an angel is giving him the order to seek aid from Charlemagne against the Saracens. Charlemagne appears, in full armour of the year 1200, on horseback. Then Charlemagne, sainted, wearing his halo, converses with two bishops on the subject of a crusade for the rescue of Constantine. In the next scene, he arrives at the gates of Constantinople where Constantine receives him. The fifth picture is most interesting; Charlemagne has advanced with his knights and attacks the Saracens; the Franks wear coats-of-mail, and carry long, pointed shields; the infidels carry round shields; Charlemagne, wearing a crown, strikes off with one blow of his sword the head of a Saracen emir; but the battle is desperate; the chargers are at full gallop, and a Saracen is striking at Charlemagne with his battle-axe. After the victory has been won, the Emperor Constantine rewards Charlemagne by the priceless gift of three chasses or reliquaries, containing a piece of the true Cross; the Suaire or grave-cloth of the Saviour; and a tunic of the Virgin. Charlemagne then returns to France, and in the next medallion presents the three chasses and the crown of the Saracen king to the church at Aix, which to a French audience meant the Abbey of Saint-Denis. This scene closes the first volume of the story.

The second part opens on Charlemagne, seated between two persons, looking up to heaven at the Milky Way, called then the Way of Saint James, which directs him to the grave of Saint James in Spain. Saint James himself appears to Charlemagne in a dream, and orders him to redeem the tomb from the infidels. Then Charlemagne sets out, with Archbishop Turpin of Rheims and knights. In presence of his army he dismounts and implores the aid of God. Then he arrives before Pampeluna and transfixes with his lance the Saracen chief as he flies into the city. Mounted, he directs workmen to construct a church in honour of Saint James; a little cloud figures the hand of God. Next is

shown the miracle of the lances; stuck in the ground at night, they are found in the morning to have burst into foliage, prefiguring martyrdom. Two thousand people perish in battle. Then begins the story of Roland which the artist and donors are so eager to tell, knowing, as they do, that what has so deeply interested men and women on earth, must interest Mary who loves them. You see Archbishop Turpin celebrating mass when an angel appears, to warn him of Roland's fate. Then Roland himself, also wearing a halo, is introduced, in the act of killing the giant Ferragus. The combat of Roland and Ferragus is at the top, out of sequence, as often happens in the legendary windows. Charlemagne and his army are seen marching homeward through the Pyrenees, while Roland winds his horn and splits the rock without being able to break Durendal. Thierry, likewise sainted, brings water to Roland in a helmet. At last Thierry announces Roland's death. At the top, on either side of Roland and Ferragus, is an angel with incense.

The execution of this window is said to be superb. Of the colour, and its relations with that of the Saint James, one needs time and long acquaintance to learn the value. In the feeling, compared with that of the twelfth century, one needs no time in order to see a change. These two windows are as French and as modern as a picture of Lancret; they are pure art, as simply decorative as the decorations of the Grand Opera. The thirteenth century knew more about religion and decoration than the twentieth century will ever learn. The windows were neither symbolic nor mystical, nor more religious than they pretended to be. That they are more intelligent or more costly or more effective is nothing to the purpose, so long as one grants that the combat of Roland and Ferragus, or Roland winding his olifant, or Charlemagne cutting off heads and transfixing Moors, were subjects never intended to teach religion or instruct the ignorant, but to please the Queen of Heaven as they pleased the queens of earth with a roman, not in verse but in colour, as near as possible to decorative perfection. Instinctively one looks to the corresponding bay, opposite, to see what the artists could have done to balance these two great efforts of their art; but

the bay opposite is now occupied by the entrance to Saint Piat's chapel and one does not know what changes may have been made in the fourteenth century to rearrange the glass; yet even as it now stands, the Sylvester window which corresponds to the Charlemagne is, as glass, the strongest in the whole cathedral. In the next chapel, on our left, come the martyrs, with Saint Stephen, the first martyr, in the middle window. Naturally the subject is more serious, but the colour is not differently treated. A step further, and you see the artists returning to their lighter subjects. The stories of Saint Julian and Saint Thomas are more amusing than the plots of half the thirteenth-century romances, and not very much more religious. The subject of Saint Thomas is a pendant to that of Saint James, for Saint Thomas was a great traveller and an architect who carried Mary's worship to India as Saint James carried it to Spain. Here is the amusement of many days in studying the stories, the colour and the execution of these windows, with the help of the 'Monographs' of Chartres and Bourges or the 'Golden Legend' and occasional visits to Le Mans, Tours, Clermont Ferrand, and other cathedrals; but, in passing, one has to note that the window of Saint Thomas was given by France, and bears the royal arms, perhaps for Philip Augustus the King; while the window of Saint Julian was given by the Carpenters and Coopers. One feels no need to explain how it happens that the taste of the royal family, and of their tailors, furriers, carpenters, and coopers, should fit so marvellously, one with another, and with that of the Virgin; but one can compare with theirs the taste of the Stoneworkers opposite, in the window of Saint Sylvester and Saint Melchiades, whose blues almost kill the Charlemagne itself, and of the Tanners in that of Saint Thomas of Canterbury; or, in the last chapel on the south side, with that of the Shoemakers in the window to Saint Martin, attributed for some reason to a certain Clemens vitrearius Carnutensis, whose name is on a window in the cathedral of Rouen. The name tells nothing, even if the identity could be proved. Clement the glassmaker may have worked on his own account, or for others; the glass differs only in refine-

ments of taste or perhaps of cost. Nicolas Lescine, the canon, or Geoffroi Chardonnel, may have been less rich than the Bakers, and even the Furriers may have not had the revenues of the King; but some controlling hand has given more or less identical taste to all.

What one can least explain is the reason why some windows, that should be here, are elsewhere. In most churches, one finds in the choir a window of doctrine, such as the so-called New Alliance, but here the New Alliance is banished to the nave. Besides the costly Charlemagne and Saint James windows in the apse, the Furriers and Drapers gave several others, and one of these seems particularly suited to serve as companion to Saint Thomas, Saint James, and Saint Julian, so that it is best taken with these while comparing them. It is in the nave, the third window from the new tower, in the north aisle — the window of Saint Eustace. The story and treatment and beauty of the work would have warranted making it a pendant to Almogenes, in the bay now serving as the door to Saint Piat's chapel, which should have been the most effective of all the positions in the church for a legendary story. Saint Eustace, whose name was Placidas, commanded the guards of the Emperor Trajan. One day he went out hunting with huntsmen and hounds, as the legend in the lower panel of the window begins; a pretty picture of a stag hunt about the year 1200; followed by one still prettier, where the stag, after leaping upon a rock, has turned, and shows a crucifix between his horns, the stag on one side balancing the horse on the other, while Placidas on his knees yields to the miracle of Christ. Then Placidas is baptized as Eustace; and in the centre, you see him with his wife and two children — another charming composition — leaving the city. Four small panels in the corners are said to contain the signatures of the Drapers and Furriers. Above, the story of adventure goes on, showing Eustace bargaining with a shipmaster for his passage; his embarcation with wife and children, and their arrival at some shore, where the two children have landed, and the master drives Eustace after them while he detains the wife. Four small panels here have not

been identified, but the legend was no doubt familiar to th
Middle Ages, and they knew how Eustace and the childre
came to a river, where you can see a pink lion carrying off on
child, while a wolf, which has seized the other, is attacked b
shepherds and dogs. The children are rescued, and the wif
reappears, on her knees before her lord, telling of her escap
from the shipmaster, while the children stand behind; and the
the reunited family, restored to the Emperor's favour, is see
feasting and happy. At last Eustace refuses to offer a sacrific
to a graceful antique idol, and is then shut up, with all hi
family, in a brazen bull; a fire is kindled beneath it; and, fron
above, a hand confers the crown of martyrdom.

Another subject, which should have been placed in the apse
stands in a singular isolation which has struck many of th
students in this branch of church learning. At Sens, Sain
Eustace is in the choir, and by his side is the Prodigal Son. A
Bourges also the Prodigal Son is in the choir. At Chartres, h
is banished to the north transept, where you will find him i
the window next the nave, almost as though he were in disgrace
yet the glass is said to be very fine, among the best in the church
while the story is told with rather more vivacity than usual
and as far as colour and execution go, the window has an air o
age and quality higher than the average. At the bottom yo
see the signature of the corporation of Butchers. The windo
at Bourges was given by the Tanners. The story begins wit
the picture showing the younger son asking the father for hi
share of the inheritance, which he receives in the next panel, an
proceeds, on horseback, to spend, as one cannot help suspecting
at Paris, in the Latin Quarter, where he is seen arriving
welcomed by two ladies. No one has offered to explain wh
Chartres should consider two ladies theologically more correc
than one; or why Sens should fix on three, or why Bourge
should require six. Perhaps this was left to the artist's fancy
but, before quitting the twelfth century, we shall see that th
usual young man who took his share of patrimony and wen
up to study in the Latin Quarter, found two schools of scholasti
teaching, one called Realism, the other Nominalism, each o

which in turn the Church had been obliged to condemn. Meanwhile the Prodigal Son is seen feasting with them, and is crowned with flowers, like a new Abélard, singing his songs to Héloïse, until his religious capital is exhausted, and he is dragged out of bed, to be driven naked from the house with sticks, in this also resembling Abélard. At Bourges he is gently turned out; at Sens he is dragged away by three devils. Then he seeks service, and is seen knocking acorns from boughs, to feed his employer's swine; but, among the thousands of young men who must have come here directly from the schools, nine in every ten said that he was teaching letters to his employer's children or lecturing to the students of the Latin Quarter. At last he decides to return to his father — possibly the Archbishop of Paris or the Abbot of Saint-Denis — who receives him with open arms, and gives him a new robe, which to the ribald student would mean a church living — an abbey, perhaps Saint Gildas-de-Rhuys in Brittany, or elsewhere. The fatted calf is killed, the feast is begun, and the elder son, whom the malicious student would name Bernard, appears in order to make protests. Above, God, on His throne, blesses the globe of the world.

The original symbol of the Prodigal Son was a rather different form of prodigality. According to the Church interpretation, the Father had two sons; the older was the people of the Jews; the younger, the Gentiles. The Father divided his substance between them, giving to the older the divine law, to the younger, the law of nature. The younger went off and dissipated his substance, as one must believe, on Aristotle; but repented and returned when the Father sacrificed the victim — Christ — as the symbol of reunion. That the Synagogue also accepts the sacrifice is not so clear; but the Church clung to the idea of converting the Synagogue as a necessary proof of Christ's divine character. Not until about the time when this window may have been made, did the new Church, under the influence of Saint Dominic, abandon the Jews and turn in despair to the Gentiles alone.

The old symbolism belonged to the fourth and fifth centuries, and, as told by the Jesuit fathers Martin and Cahier in their

'Monograph' of Bourges, it should have pleased the Virgin who was particularly loved by the young, and habitually showed her attachment to them. At Bourges the window stands next the central chapel of the apse, where at Chartres is the entrance to Saint Piat's chapel; but Bourges did not belong to Notre Dame, nor did Sens. The story of the prodigal sons of these years from 1200 to 1230 lends the window a little personal interest that the Prodigal Son of Saint Luke's Gospel could hardly have had even to thirteenth-century penitents. Neither the Church nor the Crown loved prodigal sons. So far from killing fatted calves for them, the bishops in 1209 burned no less than ten in Paris for too great intimacy with Arab and Jew disciples of Aristotle. The position of the Bishop of Chartres between the schools had been always awkward. As for Blanche of Castile, her first son, afterwards Saint Louis, was born in 1215; and after that time no Prodigal Son was likely to be welcomed in any society which she frequented. For her, above all other women on earth or in heaven, prodigal sons felt most antipathy, until, in 1229, the quarrel became so violent that she turned her police on them and beat a number to death in the streets. They retaliated without regard for loyalty or decency, being far from model youth and prone to relapses from virtue, even when forgiven and beneficed.

The Virgin Mary, Queen of Heaven, showed no prejudice against prodigal sons, or even prodigal daughters. She would hardly, of her own accord, have ordered such persons out of her apse, when Saint Stephen at Bourges and Sens showed no such puritanism; yet the Chartres window is put away in the north transept. Even there it still stands opposite the Virgin of the Pillar, on the women's and Queen Blanche's side of the church, and in an excellent position, better seen from the choir than some of the windows in the choir itself, because the late summer sun shines full upon it, and carries its colours far into the apse. This may have been one of the many instances of tastes in the Virgin which were almost too imperial for her official court. Omniscient as Mary was, she knew no difference between the Blanches of Castile and the students of the Latin Quarter.

She was rather fond of prodigals, and gentle toward the ladies who consumed the prodigal's substance. She admitted Mary Magdalen and Mary the Gipsy to her society. She fretted little about Aristotle so long as the prodigal adored her, and naturally the prodigal adored her almost to the exclusion of the Trinity. She always cared less for her dignity than was to be wished. Especially in the nave and on the porch, among the peasants, she liked to appear as one of themselves; she insisted on lying in bed, in a stable, with the cows and asses about her, and her baby in a cradle by the bedside, as though she had suffered like other women, though the Church insisted she had not. Her husband, Saint Joseph, was notoriously uncomfortable in her Court, and always preferred to get as near to the door as he could. The choir at Chartres, on the contrary, was aristocratic; every window there had a court quality, even down to the contemporary Thomas A'Becket, the fashionable martyr of good society. Theology was put into the transepts or still further away in the nave where the window of the New Alliance elbows the Prodigal Son. Even to Blanche of Castile, Mary was neither a philanthropist nor theologist nor merely a mother — she was an absolute Empress, and whatever she said was obeyed, but sometimes she seems to have willed an order that worried some of her most powerful servants.

Mary chose to put her Prodigal into the transept, and one would like to know the reason. Was it a concession to the Bishop or the Queen? Or was it to please the common people that these familiar picture-books, with their popular interest, like the Good Samaritan and the Prodigal Son, were put on the walls of the great public hall? This can hardly be, since the people would surely have preferred the Charlemagne and Saint James to any other. We shall never know; but sitting here in the subdued afternoon light of the apse, one goes on for hours reading the open volumes of colour, and listening to the steady discussion by the architects, artists, priests, princes, and princesses of the thirteenth century about the arrangements of this apse. However strong-willed they might be, each in turn whether priest, or noble, or glassworker, would have certainly

appealed to the Virgin and one can imagine the architect sti
beside us, in the growing dusk of evening, mentally praying, a
he looked at the work of a finished day: 'Lady Virgin, show m
what you like best! The central chapel is correct, I know
The Lady Blanche's grisaille veils the rather strong blue ton
nicely, and I am confident it will suit you. The Charlemagn
window seems to me very successful, but the Bishop feels no
at all easy about it, and I should never have dared put it her
if the Lady Blanche had not insisted on a Spanish bay. T
balance at once both the subjects and the colour, we hav
tried the Stephen window in the next chapel, with more red; bu
if Saint Stephen is not good enough to satisfy you, we have trie
again with Saint Julian, whose story is really worth tellin
you as we tell it; and with him we have put Saint Thoma
because you loved him and gave him your girdle. I do no
myself care so very much for Saint Thomas of Canterbur
opposite, though the Count is wild about it, and the Bisho
wants it; but the Sylvester is stupendous in the morning sun
What troubles me most is the first right-hand bay. The prin
cesses would not have let me put the Prodigal Son there, eve
if it were made for the place. I've nothing else good enoug
to balance the Charlemagne unless it be the Eustace. Graciou
Lady, what ought I to do? Forgive me my blunders, m
stupidity, my wretched want of taste and feeling! I love an
adore you! All that I am, I am for you! If I cannot please you
I care not for Heaven! but without your help, I am lost!'

Upon my word, you may sit here forever imagining such
appeals, and the endless discussions and criticisms that wer
heard every day, under these vaults, seven hundred years ago
That the Virgin answered the questions is my firm belief, jus
as it is my conviction that she did not answer them elsewhere
One sees her personal presence on every side. Any one can fee
it who will only consent to feel like a child. Sitting here an
Sunday afternoon, while the voices of the children of th
mâitrise are chanting in the choir — your mind held in th
grasp of the strong lines and shadows of the architecture; you
eyes flooded with the autumn tones of the glass; your ear

drowned with the purity of the voices; one sense reacting upon another until sensation reaches the limit of its range — you, or any other lost soul, could, if you cared to look and listen, feel a sense beyond the human ready to reveal a sense divine that would make that world once more intelligible, and would bring the Virgin to life again, in all the depths of feeling which she shows here — in lines, vaults, chapels, colours, legends, chants — more eloquent than the prayer-book, and more beautiful than the autumn sunlight; and any one willing to try could feel it like the child, reading new thought without end into the art he has studied a hundred times; but what is still more convincing, he could, at will, in an instant, shatter the whole art by calling into it a single motive of his own.

X. *The Court of the Queen of Heaven*

ALL artists love the sanctuary of the Christian Church, and all tourists love the rest. The reason becomes clear as one leaves the choir, and goes back to the broad, open hall of the nave. The choir was made not for the pilgrim but for the deity, and is as old as Adam, or perhaps older; at all events old enough to have existed in complete artistic and theological form, with the whole mystery of the Trinity, the Mother and Child, and even the Cross, thousands of years before Christ was born; but the Christian Church not only took the sanctuary in hand, and gave it a new form, more beautiful and much more refined than the Romans or Greeks or Egyptians had ever imagined, but it also added the idea of the nave and transepts, and developed it into imperial splendour. The pilgrim-tourist feels at home in the nave because it was built for him; the artist loves the sanctuary because he built it for God.

Chartres was intended to hold ten thousand people easily, or fifteen thousand when crowded, and the decoration of this great space, though not a wholly new problem, had to be treated in a new way. Sancta Sofia was built by the Emperor Justinian, with all the resources of the Empire, in a single violent effort, in six years, and was decorated throughout with mosaics on a general scheme, with the unity that Empire and Church could give, when they acted together. The Norman Kings of Sicily, the richest princes of the twelfth century, were able to carry out

a complete work of the most costly kind, in a single sustained effort from beginning to end, according to a given plan. Chartres was a local shrine, in an agricultural province, not even a part of the royal domain, and its cathedral was the work of society, without much more tie than the Virgin gave it. Socially Chartres, as far as its stone-work goes, seems to have been mostly rural; its decoration, in the porches and transepts, is royal and feudal; in the nave and choir it is chiefly bourgeois. The want of unity is much less surprising than the unity, but it is still evident, especially in the glass. The mosaics of Monreale begin and end; they are a series; their connection is artistic and theological at once; they have unity. The windows of Chartres have no sequence, and their charm is in variety, in individuality, and sometimes even in downright hostility to each other, reflecting the picturesque society that gave them. They have, too, the charm that the world has made no attempt to popularize them for its modern uses, so that, except for the useful little guide-book of the Abbé Clerval, one can see no clue to the legendary chaos; one has it to one's self, without much fear of being trampled upon by critics or Jew dealers in works of art; any Chartres beggar-woman can still pass a summer's day here, and never once be mortified by ignorance of things that every dealer in bric-à-brac is supposed to know.

Yet the artists seem to have begun even here with some idea of sequence, for the first window in the north aisle, next the new tower, tells the story of Noah; but the next plunges into the local history of Chartres, and is devoted to Saint Lubin, a bishop of this diocese who died in or about the year 556, and was, for some reason, selected by the Wine-Merchants to represent them, as their interesting medallions show. Then follow three amusing subjects, charmingly treated: Saint Eustace, whose story has been told; Joseph and his brethren; and Saint Nicholas, the most popular saint of the thirteenth century, both in the Greek and in the Roman Churches. The sixth and last window on the north aisle of the nave is the New Alliance.

Opposite these, in the south aisle, the series begins next the tower with John the Evangelist, followed by Saint Mary

Magdalen, given by the Water-Carriers. The third, the Good Samaritan, given by the Shoemakers, has a rival at Sens which critics think even better. The fourth is the Death, Assumption and Coronation of the Virgin. Then comes the fifteenth-century Chapel of Vendôme, to compare the early and later glass. The sixth is, or was, devoted to the Virgin's Miracles at Chartres; but only one complete subject remains.

These windows light the two aisles of the nave and decorate the lower walls of the church with a mass of colour and variety of line still practically intact in spite of much injury; but the windows of the transepts on the same level have almost disappeared, except the Prodigal Son and a border to what was once a Saint Lawrence, on the north; and, on the south, part of a window to Saint Apollinaris of Ravenna, with an interesting hierarchy of angels above: seraphim and cherubim with six wings, red and blue; Dominations; Powers; Principalities; all except Thrones.

All this seems to be simple enough, at least to the people for whom the nave was built, and to whom the windows were meant to speak. There is nothing esoteric here; nothing but what might have suited the great hall of a great palace. There is no difference in taste between the Virgin in the choir, and the Water-Carriers by the doorway. Blanche, the young Queen, liked the same colours, legends, and lines that her Grocers and Bakers liked. All equally loved the Virgin. There was not even a social difference. In the choir, Thibaut, the Count of Chartres, immediate lord of the province, let himself be put in a dark corner next the Belle-Verrière, and left the Bakers to display their wealth in the most serious spot in the church, the central window of the central chapel, while in the nave and transepts all the lower windows that bear signatures were given by trades, as though that part of the church were abandoned to the commons. One might suppose that the feudal aristocracy would have fortified itself in the clerestory and upper windows, but even there the bourgeoisie invaded them, and you can see, with a glass, the Pastrycooks and Turners looking across at the Weavers and Curriers and Money-Changers, and the 'Men o

Tours.' Beneath the throne of the Mother of God, there was no distinction of gifts; and above it the distinction favoured the commonalty. Of the seven immense windows above and around the high altar, which are designed as one composition, none was given by a prince or a noble. The Drapers, the Butchers, the Bakers, the Bankers are charged with the highest duties attached to the Virgin's service. Apparently neither Saint Louis, nor his father Louis VIII, nor his mother Blanche, nor his uncle Philippe Hurepel, nor his cousin Saint Ferdinand of Castile, nor his other cousin Pierre de Dreux, nor the Duchess Alix of Brittany, cared whether their portraits or armorial shields were thrust out of sight into corners by Pastrycooks and Teamsters, or took a whole wall of the church to themselves. The only relation that connects them is their common relation to the Virgin, but that is emphatic, and dominates the whole.

It dominates us, too, if we reflect on it, even after seven hundred years that its meaning has faded. When one looks up to this display of splendour in the clerestory, and asks what was in the minds of the people who joined to produce, with such immense effort and at such self-sacrifice, this astonishing effect, the question seems to answer itself like an echo. With only half of an atrophied imagination, in a happy mood we could still see the nave and transepts filled with ten thousand people on their knees, and the Virgin, crowned and robed, seating herself on the embroidered cushion that covered her imperial throne; sparkling with gems; bearing in her right hand the sceptre, and in her lap the infant King; but, in the act of seating herself, we should see her pause a moment to look down with love and sympathy on us — her people — who pack the enormous hall, and throng far out beyond the open portals; while, an instant later, she glances up to see that her great lords, spiritual and temporal, the advisers of her judgment, the supports of her authority, the agents of her will, shall be in place; robed, mitred, armed; bearing the symbols of her authority and their office; on horseback, lance in hand; all of them ready at a sign to carry out a sentence of judgment or an errand of mercy; to touch with the sceptre or to strike with the sword; and never err.

There they still stand! unchanged, unfaded, as alive and complete as when they represented the real world, and the people below were the unreal and ephemeral pageant! Then the reality was the Queen of Heaven on her throne in the sanctuary, and her court in the glass; not the queens or princes who were prostrating themselves, with the crowd, at her feet. These people knew the Virgin as well as they knew their own mothers every jewel in her crown, every stitch of gold-embroidery in her many robes; every colour; every fold; every expression on the perfectly familiar features of her grave, imperial face; every care that lurked in the silent sadness of her power; repeated over and over again, in stone, glass, ivory, enamel, wood; in every room, at the head of every bed, hanging on every neck, standing at every street-corner, the Virgin was as familiar to every one of them as the sun or the seasons; far more familiar than their own earthly queen or countess, although these were no strangers in their daily life; familiar from the earliest childhood to the last agony; in every joy and every sorrow and every danger; in every act and almost in every thought of life, the Virgin was present with a reality that never belonged to her Son or to the Trinity, and hardly to any earthly being, prelate, king, or kaiser; her daily life was as real to them as their own loyalty which brought to her the best they had to offer as the return for her boundless sympathy; but while they knew the Virgin as though she were one of themselves, and because she had been one of themselves, they were not so familiar with all the officers of her court at Chartres; and pilgrims from abroad, like us, must always have looked with curious interest at the pageant.

Far down the nave, next the western towers, the rank began with saints, prophets, and martyrs, of all ages and countries; local, like Saint Lubin; national, like Saint Martin of Tours and Saint Hilary of Poitiers; popular like Saint Nicholas; militant like Saint George; without order; symbols like Abraham and Isaac; the Virgin herself, holding on her lap the Seven Gifts of the Holy Ghost; Christ with the Alpha and Omega; Moses and Saint Augustine; Saint Peter; Saint Mary the Egyp-

tian; Saint Jerome; a whole throne-room of heavenly powers, repeating, within, the pageant carved on the porches and on the portals without. From the croisée in the centre, where the crowd is most dense, one sees the whole almost better than Mary sees it from her high altar, for there all the great rose windows flash in turn, and the three twelfth-century lancets glow on the western sun. When the eyes of the throng are directed to the north, the Rose of France strikes them almost with a physical shock of colour, and, from the south, the Rose of Dreux challenges the Rose of France.

Every one knows that there is war between the two! The thirteenth century has few secrets. There are no outsiders. We are one family as we are one Church. Every man and woman here, from Mary on her throne to the beggar on the porch, knows that Pierre de Dreux detests Blanche of Castile, and that their two windows carry on war across the very heart of the cathedral. Both unite only in asking help from Mary; but Blanche is a woman, alone in the world with young children to protect, and most women incline strongly to suspect that Mary will never desert her. Pierre, with all his masculine strength, is no courtier. He wants to rule by force. He carries the assertion of his sex into the very presence of the Queen of Heaven.

The year happens to be 1230, when the roses may be supposed just finished and showing their whole splendour for the first time. Queen Blanche is forty-three years old, and her son Louis is fifteen. Blanche is a widow these four years, and Pierre a widower since 1221. Both are regents and guardians for their heirs. They have necessarily carried their disputes before Mary. Queen Blanche claims for her son, who is to be Saint Louis, the place of honour at Mary's right hand; she has taken possession of the north porch outside, and of the north transept within, and has filled the windows with glass, as she is filling the porch with statuary. Above is the huge rose; below are five long windows; and all proclaim the homage that France renders to the Queen of Heaven.

The Rose of France shows in its centre the Virgin in her majesty, seated, crowned, holding the sceptre with her right

hand, while her left supports the infant Christ-King on her knees; which shows that she, too, is acting as regent for her Son. Round her, in a circle, are twelve medallions; four containing doves; four six-winged angels or Thrones; four angels of a lower order, but all symbolizing the gifts and endowments of the Queen of Heaven. Outside these are twelve more medallions with the Kings of Judah, and a third circle contains the twelve lesser prophets. So Mary sits, hedged in by all the divinity that graces earthly or heavenly kings; while between the two outer circles are twelve quatrefoils bearing on a blue ground the golden lilies of France; and in each angle below the rose are four openings, showing alternately the lilies of Louis and the castles of Blanche. We who are below, the common people, understand that France claims to protect and defend the Virgin of Chartres, as her chief vassal, and that this ostentatious profusion of lilies and castles is intended not in honour of France, but as a demonstration of loyalty to Notre Dame, and an assertion of her rights as Queen Regent of Heaven against all comers, but particularly against Pierre, the rebel, who has the audacity to assert rival rights in the opposite transept.

Beneath the rose are five long windows, very unlike the twelfth-century pendants to the western rose. These five windows blaze with red, and their splendour throws the Virgin above quite into the background. The artists, who felt that the twelfth-century glass was too fine and too delicate for the new scale of the church, have not only enlarged their scale and coarsened their design, but have coarsened their colour-scheme also, discarding blue in order to crush us under the earthly majesty of red. These windows, too, bear the stamp and seal of Blanche's Spanish temper as energetically as though they bore her portrait. The great central figure, the tallest and most commanding in the whole church, is not the Virgin, but her mother Saint Anne, standing erect as on the trumeau of the door beneath, and holding the infant Mary on her left arm. She wears no royal crown, but bears a flowered sceptre. The only other difference between Mary and her mother, that seems intended to strike attention, is that Mary sits, while her mother

stands; but as though to proclaim still more distinctly that France supports the royal and divine pretensions of Saint Anne, Queen Blanche has put beneath the figure a great shield blazoned with the golden lilies on an azure ground.

With singular insistence on this motive, Saint Anne has at either hand a royal court of her own, marked as her own by containing only figures from the Old Testament. Standing next on her right is Solomon, her Prime Minister, bringing wisdom in wordly counsel, and trampling on human folly. Beyond Wisdom stands Law, figured by Aaron with the Book, trampling on the lawless Pharaoh. Opposite them, on Saint Anne's left, is David, the energy of State, trampling on a Saul suggesting suspicions of a Saul de Dreux; while last, Melchisedec who is Faith, tramples on a disobedient Nebuchadnezzar Mauclerc.

How can we, the common people, help seeing all this and much more, when we know that Pierre de Dreux has been for years in constant strife with the Crown and the Church? He is very valiant and lion-hearted; — so say the chroniclers, priests though they are; — very skilful and experienced in war whether by land or sea; very adroit, with more sense than any other great lord in France; but restless, factious, and regardless of his word. Brave and bold as the day; full of courtesy and 'largesse'; but very hard on the clergy; a good Christian but a bad churchman! Certainly the first man of his time, says Michelet! 'I have never found any that sought to do me more ill than he,' says Blanche, and Joinville gives her very words; indeed, this year, 1230, she has summoned our own Bishop of Chartres among others to Paris in a court of peers, where Pierre has been found guilty of treason and deposed. War still continues, but Pierre must make submission. Blanche has beaten him in politics and in the field! Let us look round and see how he fares in theology and art!

There is his rose — so beautiful that Blanche may well think it seeks to do hers ill! As colour, judge for yourselves whether it holds its own against the flaming self-assertion of the opposite wall! As subject, it asserts flat defiance of the monarchy of Queen Blanche. In the central circle, Christ as King is seated

on a royal throne, both arms raised, one holding the golden cu of eternal priesthood, the other, blessing the world. Two grea flambeaux burn beside Him. The four Apocalpytic figure surround and worship Him; and in the concentric circles roun the central medallion are the angels and the kings in a blaze c colour, symbolizing the New Jerusalem.

All the force of the Apocalypse is there, and so is some of th weakness of theology, for, in the five great windows below Pierre shows his training in the schools. Four of these window represent what is called, for want of a better name, the Ne Alliance; the dependence of the New Testament on the Old; bu Pierre's choice in symbols was as masculine as that of Blanch was feminine. In each of the four windows, a gigantic Evangelis strides the shoulders of a colossal Prophet. Saint John rides o Ezekiel; Saint Mark bestrides Daniel; Saint Matthew is on th shoulders of Isaiah; Saint Luke is carried by Jeremiah. Th effect verges on the grotesque. The balance of Christ's Churc seems uncertain. The Evangelists clutch the Prophets by th hair, and while the synagogue stands firm, the Church look small, feeble, and vacillating. The new dispensation has not th air of mastery either physical or intellectual; the old gives it a the support it has, and, in the absence of Saint Paul, both ol and new seem little concerned with the sympathies of Frenc men. The synagogue is stronger than the Church, but even th Church is Jew.

That Pierre could ever have meant this is not to be dreame but when the true scholar gets thoroughly to work, his logic remorseless, his art is implacable, and his sense of humour blighted. In the rose above, Pierre had asserted the exclusiv authority of Christ in the New Jerusalem, and his scheme re quired him to show how the Church rested on the Evangelis below, who in their turn had no visible support except what th Prophets gave them. Yet the artist may have had a reason fo weakening the Evangelists, because there remained the Virgi One dares no more than hint at a motive so disrespectful t the Evangelists; but it is certainly true that, in the centra window, immediately beneath the Christ, and His chief suppor

with the four staggering Evangelists and Prophets on either hand, the Virgin stands, and betrays no sign of weakness.

The compliment is singularly masculine; a kind of twelfth-century flattery that might have softened the anger of Blanche herself, if the Virgin had been her own; but the Virgin of Dreux is not the Virgin of France. No doubt she still wears her royal crown, and her head is circled with the halo; her right hand still holds the flowered sceptre, and her left the infant Christ, but she stands, and Christ is King. Note, too, that she stands directly opposite to her mother Saint Anne in the Rose of France, so as to place her one stage lower than the Virgin of France in the hierarchy. She is the Saint Anne of France, and shows it. 'She is no longer,' says the official Monograph, 'that majestic queen who was seated on a throne, with her feet on the stool of honour; the personages have become less imposing and the heads show the decadence.' She is the Virgin of Theology; she has her rights, and no more; but she is not the Virgin of Chartres.

She, too, stands on an altar or pedestal, on which hands a shield bearing the ermines, an exact counterpart of the royal shield beneath Saint Anne. In this excessive display of armorial bearings — for the two roses above are crowded with them — one likes to think that these great princes had in their minds not so much the thought of their own importance — which is a modern sort of religion — as the thought of their devotion to Mary. The assertion of power and attachment by one is met by the assertion of equal devotion by the other, and while both loudly proclaim their homage to the Virgin, each glares defiance across the church. Pierre meant the Queen of Heaven to know that, in case of need, her left hand was as good as her right, and truer; that the ermines were as well able to defend her as the lilies, and that Brittany would fight her battles as bravely as France. Whether his meaning carried with it more devotion to the Virgin or more defiance to France depends a little on the date of the windows, but, as a mere point of history, every one must allow that Pierre's promise of allegiance was kept more faithfully by Brittany than that of Blanche and Saint Louis has been kept by France.

The date seems to be fixed by the windows themselves. B neath the Prophets kneel Pierre and his wife Alix, while the two children, Yolande and Jean, stand. Alix died in 122 Jean was born in 1217. Yolande was affianced in marriage i 1227, while a child, and given to Queen Blanche to be brougl up as the future wife of her younger son John, then in his eight year. When John died, Yolande was contracted to Thibaut Champagne in 1231, and Blanche is said to have written t Thibaut in consequence: 'Sire Thibauld of Champagne, I hav heard that you have covenanted and promised to take to wif the daughter of Count Perron of Brittany. Wherefore I charg you, if you do not wish to lose whatever you possess in the king dom of France, not to do it. If you hold dear or love aught i the said kingdom, do it not.' Whether Blanche wrote in thes words or not, she certainly prevented the marriage, and Yoland remained single until 1238 when she married the Comte de l Marche, who was, by the way, almost as bitter an enemy o Blanche as Pierre had been; but by that time both Blanche an Pierre had ceased to be regents. Yolande's figure in the windo is that of a girl, perhaps twelve or fourteen years old; Jean i younger, certainly not more than eight or ten years of age; an the appearance of the two children shows that the window itsel should date between 1225 and 1230, the year when Pierre d Dreux was condemned because he had renounced his homage t King Louis, declared war on him, and invited the King o England into France. As already told, Philippe Hurepel d Boulogne, the Comte de la Marche, Enguerrand de Couci — nearly all the great nobles — had been leagued with Pierre d Dreux since Blanche's regency began in 1226.

That these transept windows harmonize at all, is due to th Virgin, not to the donors. At the time they were designed supposing it to be during Blanche's regency (1226–36), th passions of these donors brought France to momentary ruin and the Virgin in Blanche's Rose de France, as she looke across the church, could not see a single friend of Blanche What is more curious, she saw enemies in plenty, and in ful readiness for battle. We have seen in the centre of the small ros

n the north transept, Philippe Hurepel still waiting her orders; cross the nave, in another small rose of the south transept, sits Pierre de Dreux on his horse. The upper windows on the side valls of the choir are very interesting but impossible to see, even vith the best glasses, from the floor of the church. Their se-quence and dates have already been discussed; but their feeling s shown by the character of the Virgin, who in French territory, next the north transept, is still the Virgin of France, but in Pierre's territory, next the Rose de Dreux, becomes again the Virgin of Dreux, who is absorbed in the Child — not the Child absorbed in her — and accordingly the window shows the chequers and ermines.

The figures, like the stone figures outside, are the earliest of French art, before any school of painting fairly existed. Among them, one can see no friend of Blanche. Indeed, outside of her own immediate family and the Church, Blanche had no friend of much importance except the famous Thibaut of Champagne, the single member of the royal family who took her side and suffered for her sake, and who, as far as books tell, has no window or memorial here. One might suppose that Thibaut, who loved both Blanche and the Virgin, would have claimed a place, and perhaps he did; but one seeks him in vain. If Blanche had friends here, they are gone. Pierre de Dreux, lance in hand, openly defies her, and it was not on her brother-in-law Philippe Hurepel that she could depend for defence.

This is the court pageant of the Virgin that shows itself to the people who are kneeling at high mass. We, the public, whoever we are — Chartrain, Breton, Norman, Angevin, Frenchman, Percherain, or what not — know our local politics as intimately as our lords do, or even better, for our imaginations are active, and we do not love Blanche of Castile. We know how to read the passions that fill the church. From the north transept Blanche flames out on us in splendid reds and flings her Spanish castles in our face. From the south transept Pierre retorts with a brutal energy which shows itself in the Prophets who serve as battle-chargers and in the Evangelists who serve as knights — mounted warriors of faith — whose great eyes follow us across

the church and defy Saint Anne and her French shield oppos
Pierre was not effeminate; Blanche was fairly masculine.
tween them, as a matter of sex, we can see little to choose; a
in any case, it is a family quarrel; they are all cousins; they
all equals on earth, and none means to submit to any supe
except the Virgin and her Son in heaven. The Virgin is
afraid. She has seen many troubles worse than this; she kn
how to manage perverse children, and if necessary she will s
them up in a darker room than ever their mothers kept o
for them in this world. One has only to look at the Virgin to s

There she is, of course, looking down on us from the gr
window above the high altar, where we never forget her p
sence! Is there a thought of disturbance there? Around
curve of the choir are seven great windows, without ros
filling the whole semicircle and the whole vault, forty-seven f
high, and meant to dominate the nave as far as the weste
portal, so that we may never forget how Mary fills her chur
without being disturbed by quarrels, and may understand w
Saint Ferdinand and Saint Louis creep out of our sight, close
the Virgin's side, far up above brawls; and why France a
Brittany hide their ugly or their splendid passions at the e
of the transepts, out of sight of the high altar where Mary is
sit in state as Queen with the young King on her lap. In
instant she will come, but we have a moment still to look abo
at the last great decoration of her palace, and see how the arti
have arranged it.

Since the building of Sancta Sofia, no artist has had su
a chance. No doubt, Rheims and Amiens and Bourges a
Beauvais, which are now building, may be even finer, but no
of them is yet finished, and all must take their ideas from he
One would like, before looking at it, to think over the proble
as though it were new, and so choose the scheme that would s
us best if the decoration were to be done for the first time. T
architecture is fixed; we have to do only with the colour of th
mass of seven huge windows, forty-seven feet high, in the cle
story, round the curve of the choir, which close the vista of t
church as viewed from the entrance. This vista is about thr

undred and thirty feet long. The windows rise about a hun-
red feet. How ought this vast space to be filled? Should the
erpendicular upward leap of the architecture be followed and
ccented by a perpendicular leap of colour? The decorators
f the fifteenth and sixteenth centuries seem to have thought so,
nd made perpendicular architectural drawings in yellow that
imulated gold, and lines that ran with the general lines of the
uilding. Many fifteenth-century windows seem to be made up
f florid Gothic details rising in stages to the vault. No doubt
ritics complained, and still complain, that the monotony of
his scheme, and its cheapness of intelligence, were objections;
ut at least the effect was light, decorative, and safe. The
rtist could not go far wrong and was still at liberty to do beauti-
ul work, as can be seen in any number of churches scattered
roadcast over Europe and swarming in Paris and France.
n the other hand, might not the artist disregard the architec-
ure and fill the space with a climax of colour? Could he not
nite the Roses of France and Dreux above the high altar in an
verpowering outburst of purples and reds? The seventeenth
entury might have preferred to mass clouds and colours, and
Michael Angelo, in the sixteenth, might have known how to do
t. What we want is not the feeling of the artist so much as the
eeling of Chartres. What shall it be — the jewelled brilliancy
f the western windows, or the fierce self-assertion of Pierre
Mauclerc, or the royal splendour of Queen Blanche, or the
eminine grace and decorative refinement of the Charlemagne
nd Santiago windows in the apse?

Never again in art was so splendid a problem offered, either
efore or since, for the artist of Chartres solved it, as he did the
hole matter of fenestration, and later artists could only offer
ariations on his work. You will see them at Bourges and Tours
nd in scores of thirteenth and fourteenth and fifteenth and
ixteenth century churches and windows, and perhaps in some
f the twentieth century — all of them interesting and some of
hem beautiful — and far be it from us, mean and ignorant
ilgrims of art, to condemn any intelligent effort to vary or
mprove the effect; but we have set out to seek the feeling, and

while we think of art in relation to ourselves, the sermon
Chartres, from beginning to end, teaches and preaches an
insists and reiterates and hammers into our torpid minds th
moral that the art of the Virgin was not that of her artists bu
her own. We inevitably think of our tastes; they thoug
instinctively of hers.

In the transepts, Queen Blanche and Duke Perron, in leg
possession of their territory, showed that they were thinking
each other as well as of the Virgin, and claimed loudly tha
they ought each to be first in the Virgin's favour; and the
stand there in place, as the thirteenth century felt them. Subjec
to their fealty to Mary, the transepts belonged to them, an
if Blanche did not, like Pierre, assert herself and her son on th
Virgin's window, perhaps she thought the Virgin would resen
Pierre's boldness the more by contrast with her own good taste
So far as is known, nowhere does Blanche appear in perso
at Chartres; she felt herself too near the Virgin to obtrude
useless image, or she was too deeply religious to ask anything
for herself. A queen who was to have two children sainted, t
intercede for her at Mary's throne, stood in a solitude almost a
unique as that of Mary, and might ignore the raw brutalities o
a man-at-arms; but neither she nor Pierre has carried the
quarrel into Mary's presence, nor has the Virgin condescended
even to seem conscious of their temper. This is the theme of the
artist — the purity, the beauty, the grace, and the infinite
loftiness of Mary's nature, among the things of earth, and above
the clamour of kings.

Therefore, when we, and the crushed crowd of kneeling wor-
shippers around us, lift our eyes at last after the miracle of the
mass, we see, far above the high altar, high over all the agitation
of prayer, the passion of politics, the anguish of suffering, the
terrors of sin, only the figure of the Virgin in majesty, looking
down on her people, crowned, throned, glorified, with the
infant Christ on her knees. She does not assert herself; probably
she intends to be felt rather than feared. Compared with the
Greek Virgin, as you see her, for example, at Torcello, the
Chartres Virgin is retiring and hardly important enough for the

place. She is not exaggerated either in scale, drawing, or colour. She shows not a sign of self-consciousness, not an effort for brilliancy, not a trace of stage effect — hardly even a thought of herself, except that she is at home, among her own people, where she is loved and known as well as she knows them. The seven great windows are one composition; and it is plain that the artist, had he been ordered to make an exhibition of power, could have overwhelmed us with a storm of purple, red, yellows, or given us a Virgin of Passion who would have torn the vault asunder; his ability is never in doubt, and if he has kept true to the spirit of the western portal and the twelfth century, it is because the Virgin of Chartres was the Virgin of Grace, and ordered him to paint her so. One shudders to think how a single false note — a suggestion of meanness, in this climax of line and colour — would bring the whole fabric down in ruins on the eighteenth-century meanness of the choir below; and one notes, almost bashfully, the expedients of the artists to quiet their effects. So the lines of the seven windows are built up, to avoid the horizontal, and yet not exaggerate the vertical. The architect counts here for more than the colourists; but the colour, when you study it, suggests the same restraint. Three great windows on the Virgin's right, balanced by three more on her left, show the prophets and precursors of her Son; all architecturally support and exalt the Virgin, in her celestial atmosphere of blue, shot with red, calm in the certainty of heaven. Any one who is prematurely curious to see the difference in treatment between different centuries should go down to the church of Saint Pierre in the lower town, and study there the methods of the Renaissance. Then we can come back to study again the ways of the thirteenth century. The Virgin will wait; she will not be angry; she knows her power; we all come back to her in the end.

Or the Renaissance, if one prefers, can wait equally well, while one kneels with the thirteenth century, and feels the little one still can feel of what it felt. Technically these apsidal windows have not received much notice; the books rarely speak of them; travellers seldom look at them; and their height is such that

even with the best glass, the quality of the work is beyond o
power to judge. We see, and the artists meant that we shou
see, only the great lines, the colour, and the Virgin. The ma
of suppliants before the choir look up to the light, clear blues ar
reds of this great space, and feel there the celestial peace ar
beauty of Mary's nature and abode. There is heaven! and Ma
looks down from it, into her church, where she sees us on o
knees, and knows each one of us by name. There she actually
— not in symbol or in fancy, but in person, descending on h
errands of mercy and listening to each one of us, as her miracl
prove, or satisfying our prayers merely by her presence whic
calms our excitement as that of a mother calms her child. Sh
is there as Queen, not merely as intercessor, and her power
such that to her the difference between us earthly beings
nothing. Her quiet, masculine strength enchants us mos
Pierre Mauclerc and Philippe Hurepel and their men-at-arm
are afraid of her, and the Bishop himself is never quite at h
ease in her presence; but to peasants, and beggars, and peopl
in trouble, this sense of her power and calm is better than activ
sympathy. People who suffer beyond the formulas of expressio
— who are crushed into silence, and beyond pain — want n
display of emotion — no bleeding heart — no weeping at th
foot of the Cross — no hysterics — no phrases! They want t
see God, and to know that He is watching over His own. Ho
many women are there, in this mass of thirteenth-centur
suppliants, who have lost children? Probably nearly all, for th
death rate is very high in the conditions of mediaeval life. Ther
are thousands of such women here, for it is precisely this cla
who come most; and probably every one of them has looked u
to Mary in her great window, and has felt actual certainty, a
though she saw with her own eyes — there, in heaven, while sh
looked — her own lost baby playing with the Christ-Chil
at the Virgin's knee, as much at home as the saints, and muc
more at home than the kings. Before rising from her knees, ever
one of these women will have bent down and kissed the ston
pavement in gratitude for Mary's mercy. The earth, she say
is a sorry place, and the best of it is bad enough, no doubt, eve

for Queen Blanche and the Duchess Alix who has had to leave her children here alone; but there above is Mary in heaven who sees and hears me as I see her, and who keeps my little boy till I come; so I can wait with patience, more or less! Saints and prophets and martyrs are all very well, and Christ is very sublime and just, but Mary *knows!*

It was very childlike, very foolish, very beautiful, and very true — as art, at least: so true that everything else shades off into vulgarity, as you see the Persephone of a Syracusan coin shade off into the vulgarity of a Roman emperor; as though the heaven that lies about us in our infancy too quickly takes colours that are not so much sober as sordid, and would be welcome if no worse than that. Vulgarity, too, has feeling, and its expression in art has truth and even pathos, but we shall have time enough in our lives for that, and all the more because, when we rise from our knees now, we have finished our pilgrimage. We have done with Chartres. For seven hundred years Chartres has seen pilgrims, coming and going more or less like us, and will perhaps see them for another seven hundred years; but we shall see it no more, and can safely leave the Virgin in her majesty, with her three great prophets on either hand, as calm and confident in their own strength and in God's providence as they were when Saint Louis was born, but looking down from a deserted heaven, into an empty church, on a dead faith.

XI. The Three Queens

AFTER worshipping at the shrines of Saint Michael on hi
Mount and of the Virgin at Chartres, one may wande
far and wide over France, and seldom feel lost; all late
Gothic art comes naturally, and no new thought disturbs th
perfected form. Yet tourists of English blood and America
training are seldom or never quite at home there. Commonl
they feel it only as a stage-decoration. The twelfth and thir
teenth centuries, studied in the pure light of political economy
are insane. The scientific mind is atrophied, and suffers unde
inherited cerebral weakness, when it comes in contact with th
eternal woman — Astarte, Isis, Demeter, Aphrodite, and th
last and greatest deity of all, the Virgin. Very rarely one lingers
with a mild sympathy, such as suits the patient student of huma
error, willing to be interested in what he cannot understand
Still more rarely, owing to some revival of archaic instincts, h
rediscovers the woman. This is perhaps the mark of the artis
alone, and his solitary privilege. The rest of us cannot feel; w
can only study. The proper study of mankind is woman and
by common agreement since the time of Adam, it is the mos
complex and arduous. The study of Our Lady, as shown by th
art of Chartres, leads directly back to Eve, and lays bare th
whole subject of sex.

If it were worth while to argue a paradox, one might maintai
that Nature regards the female as the essential, the male as th
superfluity of her world. Perhaps the best starting-point fo

study of the Virgin would be a practical acquaintance with bees, and especially with queen bees. Precisely where the French man may come in, on the genealogical tree of parthenogenesis, one hesitates to say; but certain it is that the French woman, from very early times, has shown qualities peculiar to herself, and that the French woman of the Middle Ages was a masculine character. Almost any book which deals with the social side of the twelfth century has something to say on this subject, like the following page from M. Garreau's volume published in 1899, on the 'Social State of France during the Crusades':

> A trait peculiar to this epoch is the close resemblance between the manners of men and women. The rule that such and such feelings or acts are permitted to one sex and forbidden to the other was not fairly settled. Men had the right to dissolve in tears, and women that of talking without prudery.... If we look at their intellectual level, the women appear distinctly superior. They are more serious; more subtle. With them we do not seem dealing with the rude state of civilization that their husbands belong to.... As a rule, the women seem to have the habit of weighing their acts; of not yielding to momentary impressions. While the sense of Christianity is more developed in them than in their husbands, on the other hand they show more perfidy and art in crime.... One might doubtless prove by a series of examples that the maternal influence when it predominated in the education of a son gave him a marked superiority over his contemporaries. Richard Coeur-de-Lion the crowned poet, artist, the king whose noble manners and refined mind in spite of his cruelty exercised so strong an impression on his age, was formed by that brilliant Eleanor of Guienne who, in her struggle with her husband, retained her sons as much as possible within her sphere of influence in order to make party chiefs of them. Our great Saint Louis, as all know, was brought up exclusively by Blanche of Castile; and Joinville, the charming writer so worthy of Saint Louis's friendship, and apparently so superior to his surroundings, was also the pupil of a widowed and regent mother.

The superiority of the woman was not a fancy, but a fact. Man's business was to fight or hunt or feast or make love. The

man was also the travelling partner in commerce, common absent from home for months together, while the woman carrie on the business. The woman ruled the household and the wor shop; cared for the economy; supplied the intelligence, an dictated the taste. Her ascendancy was secured by her allianc with the Church, into which she sent her most intelligent chi dren; and a priest or clerk, for the most part, counted social as a woman. Both physically and mentally the woman w robust, as the men often complained, and she did not great resent being treated as a man. Sometimes the husband be her, dragged her about by the hair, locked her up in the hous but he was quite conscious that she always got even with him i the end. As a matter of fact, probably she got more than ever On this point, history, legend, poetry, romance, and especiall the popular fabliaux — invented to amuse the gross tastes o the coarser class — are all agreed, and one could give scores o volumes illustrating it. The greatest men illustrate it best, a one might show almost at hazard. The greatest men of th eleventh, twelfth, and thirteenth centuries were William th Norman; his great-grandson Henry II Plantagenet; Saint Lou of France; and, if a fourth be needed, Richard Coeur-de-Lion Notoriously all these men had as much difficulty as Louis XI himself with the women of their family. Tradition exaggerate everything it touches, but shows, at the same time, what passing in the minds of the society which *tradites*. In Normandy the people of Caen have kept a tradition, told elsewhere in othe forms, that one day, Duke William — the Conqueror — ex asperated by having his bastardy constantly thrown in his fac by the Duchess Matilda, dragged her by the hair, tied to hi horse's tail, as far as the suburb of Vaucelles; and this legen accounts for the splendour of the Abbaye-aux-Dames, becaus William, the common people believed, afterwards regretted th impropriety, and atoned for it by giving her money to build th abbey. The story betrays the man's weakness. The Abbaye aux-Dames stands in the same relation to the Abbaye-aux Hommes that Matilda took towards William. Inferiority ther was none; on the contrary, the woman was socially the superior

and William was probably more afraid of her than she of him, if Mr. Freeman is right in insisting that he married her in spite of her having a husband living, and certainly two children. If William was the strongest man in the eleventh century, his great-grandson, Henry II of England, was the strongest man of the twelfth; but the history of the time resounds with the noise of his battles with Queen Eleanor whom he, at last, held in prison for fourteen years. Prisoner as she was, she broke him down in the end. One is tempted to suspect that, had her husband and children been guided by her, and by her policy as peacemaker for the good of Guienne, most of the disasters of England and France might have been postponed for the time; but we can never know the truth, for monks and historians abhor emancipated women — with good reason, since such women are apt to abhor them — and the quarrel can never be pacified. Historians have commonly shown fear of women without admitting it, but the man of the Middle Ages knew at least why he feared the woman, and told it openly, not to say brutally. Long after Eleanor and Blanche were dead, Chaucer brought the Wife of Bath on his Shakespearean stage, to explain the woman, and as usual he touched masculine frailty with caustic, while seeming to laugh at woman and man alike:

> 'My liege lady! generally,' quoth he,
> 'Women desiren to have soverainetee.'

The point was that the Wife of Bath, like Queen Blanche and Queen Eleanor, not only wanted sovereignty, but won and held it.

That Saint Louis, even when a grown man and king, stood in awe of his mother, Blanche of Castile, was not only notorious but seemed to be thought natural. Joinville recorded it not so much to mark the King's weakness, as the woman's strength; for his Queen, Margaret of Provence, showed the courage which the King had not. Blanche and Margaret were exceedingly jealous of each other. 'One day,' said Joinville, 'Queen Blanche went to the Queen's [Margaret] chamber where her son [Louis IX] had gone before to comfort her, for she was in great danger

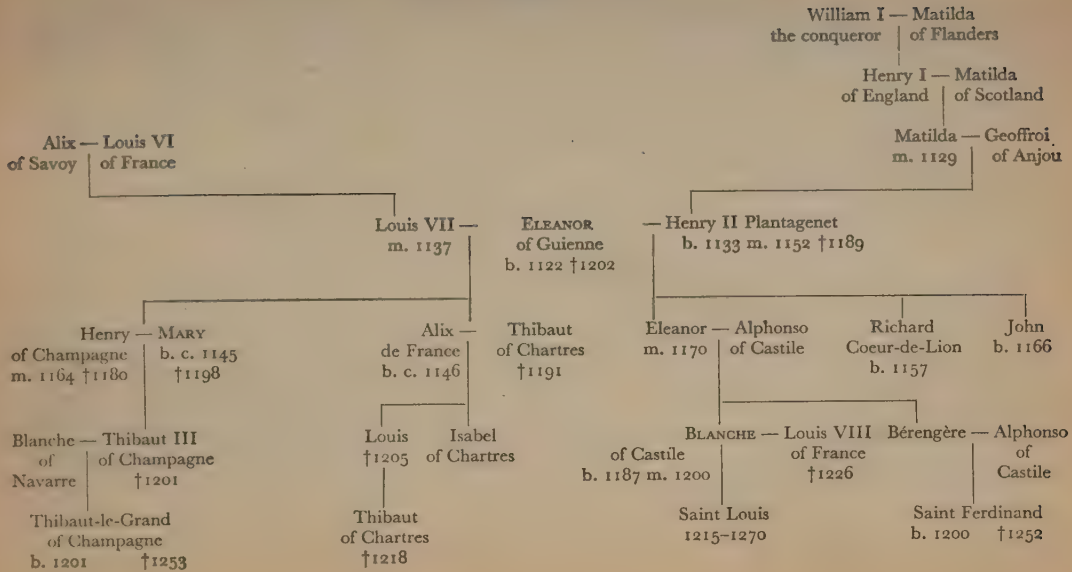
of death from a bad delivery; and he hid himself behind th
Queen [Margaret] to avoid being seen; but his mother pe
ceived him, and taking him by the hand said: "Come alon
you will do no good here!" and put him out of the chambe
Queen Margaret, observing this, and that she was to be se
arated from her husband, cried aloud: "Alas! will you not allo
me to see my lord either living or dying?"' According to Joi
ville, King Louis always hid himself when, in his wife's chambe
he heard his mother coming.

The great period of Gothic architecture begins with th
coming of Eleanor (1137) and ends with the passing of Blanch
(1252). Eleanor's long life was full of energy and passion
which next to nothing is known; the woman was always to
slippery for monks or soldiers to grasp.

Eleanor came to Paris, a Queen of fifteen years old, in 113
bringing Poitiers and Guienne as the greatest dowry ever offere
to the French Crown. She brought also the tastes and manne
of the South, little in harmony with the tastes and manners
Saint Bernard whose authority at court rivalled her own. Th
Abbé Suger supported her, but the King leaned toward th
Abbé Bernard. What this puritan reaction meant is a matt
to be studied by itself, if one can find a cloister to study in; bu
it bore the mark of most puritan reactions in its hostility
women. As long as the woman remained docile, she rule
through the Church; but the man feared her and was jealou
of her, and she of him. Bernard specially adored the Virgi
because she was an example of docile obedience to the Trini
who atoned for the indocility of Eve, but Eve herself remaine
the instrument of Satan, and French society as a whole showe
a taste for Eves.

Eleanor could hardly be called docile. Whatever else sh
loved, she certainly loved rule. She shared this passion to th
full with her only great successor and rival on the Englis
throne, Queen Elizabeth, and she happened to become Quee
of France at the moment when society was turning from worshi
of its military ideal, Saint Michael, to worship of its social idea
the Virgin. According to the monk Orderic, men had begu

THE THREE QUEENS



to throw aside their old military dress and manners even befor the first crusade, in the days of William Rufus (1087–1100) and to affect feminine fashions. In all ages, priests and monk have denounced the growing vices of society, with more or les reason; but there seems to have been a real outbreak of displa at about the time of the first crusade, which set a deep mark o every sort of social expression, even down to the shoes of th statues on the western portal of Chartres:

> A debauched fellow named Robert [said Orderic] was the first about the time of William Rufus, who introduced the practice o filling the long points of the shoes with tow, and of turning them up like a ram's horn. Hence he got the surname of Cornard; and this absurd fashion was speedily adopted by great numbers o the nobility as a proud distinction and sign of merit. At this time effeminacy was the prevailing vice throughout the world.... They parted their hair from the crown of the head on each side of the forehead, and their locks grew long like women, and wore long shirts and tunics, closely tied with points.... In our days, ancien customs are almost all changed for new fashions. Our wanton youths are sunk in effeminacy.... They insert their toes in things like serpents' tails which present to view the shape of scorpions. Sweeping the dusty ground with the prodigious trains of their robes and mantles, they cover their hands with gloves...

If you are curious to follow these monkish criticisms on your ancestors' habits, you can read Orderic at your leisure; but you want only to carry in mind the fact that the generation o warriors who fought at Hastings and captured Jerusalem were regarded by themselves as effeminate, and plunged in luxury 'Their locks are curled with hot irons, and instead of wearing caps, they bind their heads with fillets. A knight seldom appears in public with his head uncovered and properly shaved according to the apostolic precept.' The effeminacy of the first crusade took artistic shape in the west portal of Chartres and the glass of Saint-Denis, and led instantly to the puritan reaction of Saint Bernard, followed by the gentle asceticism of Queen Blanche and Saint Louis. Whether the pilgrimages to Jerusalem and contact with the East were the cause or only a consequence

of this revolution, or whether it was all one — a result of converting the Northern pagans to peaceful habits and the consequent enrichment of northern Europe — is indifferent; the fact and the date are enough. The art is French, but the ideas may have come from anywhere, like the game of chess which the pilgrims or crusaders brought home from Syria. In the Oriental game, the King was followed step by step by a *Minister* whose functions were personal. The crusaders freed the piece from control; gave it liberty to move up or down or diagonally, forwards and backwards; made it the most arbitrary and formidable champion on the board, while the King and the Knight were the most restricted in movement; and this piece they named Queen, and called the Virgin:

> Li Baudrains traist sa *fierge* por son paon sauver,
> E cele son aufin qui cuida conquester
> La *firge* ou le paon, ou faire reculer.

The *aufin* or *dauphin* became the *Fou* of the French game, and the bishop of the English. Baldwin played his Virgin to save his pawn; his opponent played the bishop to threaten either the Virgin or the pawn.

For a hundred and fifty years, the Virgin and Queens ruled French taste and thought so successfully that the French man has never yet quite decided whether to be more proud or ashamed of it. Life has ever since seemed a little flat to him, and art a little cheap. He saw that the woman, in elevating herself, had made him appear ridiculous, and he tried to retaliate with a wit not always sparkling, and too often at his own expense. Sometimes in museums or collections of bric-à-brac, you will see, in an illuminated manuscript, or carved on stone, or cast in bronze, the figure of a man on his hands and knees, bestridden by another figure holding a bridle and a whip; it is Aristotle, symbol of masculine wisdom, bridled and driven by woman. Six hundred years afterwards, Tennyson revived the same motive in Merlin, enslaved not for a time but forever. In both cases the satire justly punished the man. Another version of the same story — perhaps the original — was the Mystery of Adam, one of the earliest Church plays. Gaston Paris says 'it

was written in England in the twelfth century, and its auth had real poetic talent; the scene of the seduction of Eve by t serpent is one of the best pieces of Christian dramaturgy. . This remarkable work seems to have been played no long inside the church, but under the porch':

Diabolus. Jo vi Adam mais trop est fols.
Eva. Un poi est durs.
Diabolus. Il serra mols.
Il est plus durs qui n'est enfers.
Eva. Il est mult francs.
Diabolus. Ainz est mult sers.
Cure ne volt prendre de sei
Car la prenge sevals de tei.

Tu es fieblette et tendre chose
E es plus fresche que n'est rose.
Tu es plus blanche que cristal

Que neif que chiet sor glace en val.
Mal cuple en fist li Criatur.
Tu es trop tendre e il trop dur.
Mais neporquant tu es plus sage
En grant sens as mis tun corrage
Por co fait bon traire a tei.
Parler te voil.
Eva. Ore ja fai.

Devil. Adam I've seen, but he's t rough.
Eve. A little hard!
Devil. He'll soon be soft enoug
Harder than hell he is till now
Eve. He's very frank!
Devil. Say very low
To help himself he does not car
The helping you shall be n share;
For you are tender, gentle, tru
The rose is not so fresh as you;
Whiter than crystal, or tha snow
That falls from heaven on i below.
A sorry mixture God has brewe
You too tender, he too rude.
But you have much the great sense.
Your will is all intelligence.

Therefore it is I turn to you.
I want to tell you —
Eve. Do it now!

The woman's greater intelligence was to blame for Adam fall. Eve was justly punished because she should have know better, while Adam, as the Devil truly said, was a dull anima hardly worth the trouble of deceiving. Adam was disloyal, to untrue to his wife after being untrue to his Creator:

La femme que tu me donas
Ele fist prime icest trespas
Donat le mei e jo mangai.
Or mest vis tornez est a gwai
Mal acontai icest manger.
Jo ai mesfait par ma moiller.

The woman that you made me take
First led me into this mistake.
She gave the apple that I ate
And brought me to this evil state.
Badly for me it turned, I own,
But all the fault is hers alone.

The audience accepted this as natural and proper. The recognized the man as, of course, stupid, cowardly, and traito

ous. The men of the baser sort revenged themselves by boorishness that passed with them for wit in the taverns of Arras, but the poets of the higher class commonly took sides with the women. Even Chaucer, who lived after the glamour had faded, and who satirized women to satiety, told their tale in his 'Legend of Good Women,' with evident sympathy. To him, also, the ordinary man was inferior — stupid, brutal, and untrue. 'Full brittle is the truest,' he said:

> For well I wote that Christ himself telleth
> That in Israel, as wide as is the lond,
> That so great faith in all the lond he ne fond
> As in a woman, and this is no lie;
> And as for men, look ye, such tyrannie
> They doen all day, assay hem who so list,
> The truest is full brotell for to trist.

Neither brutality nor wit helped the man much. Even Bluebeard in the end fell a victim to the superior qualities of his last wife, and Scheherazade's wit alone has preserved the memory of her royal husband. The tradition of thirteenth-century society still rules the French stage. The struggle between two strong-willed women to control one weak-willed man is the usual motive of the French drama in the nineteenth century, as it was the whole motive of Partenopeus of Blois, one of the best twelfth-century romans; and Joinville described it, in the middle of the thirteenth, as the leading motive in the court of Saint Louis, with Queen Blanche and Queen Margaret for players, and Saint Louis himself for pawn.

One has only to look at the common, so-called Elzevirian, volume of thirteenth-century nouvelles to see the Frenchman as he saw himself. The story of 'La Comtesse de Ponthieu' is the more Shakespearean, but 'La Belle Jehanne' is the more natural and lifelike. The plot is the common masculine intrigue against the woman, which was used over and over again before Shakespeare appropriated it in 'Much Ado'; but its French development is rather in the line of 'All's Well.' The fair Jeanne, married to a penniless knight, not at all by her choice, but only because he was a favourite of her father's, was a woman

of the true twelfth-century type. She broke the head of t traitor, and when he, with his masculine falseness, caused h husband to desert her, she disguised herself as a squire ar followed Sir Robert to Marseilles in search of service in war, f the poor knight could get no other means of livelihood. Robe was the husband, and the wife, in entering his service as squi without pay, called herself John:

Molt fu mesire Robiers dolans cant il vint a Marselle de çou k'il n'oï parler de nulle chose ki fust ou païs; si dist a Jehan:

— Ke ferons nous? Vous m'aves preste de vos deniers la vostre mierchi; si les vos renderai car je venderai mon palefroi et m'acuiterai a vous.

— Sire, dist Jehans, crees moi se il vous plaist je vous dirai ke nous ferons; jou ai bien enchore .c. sous de tournois; s'il vous plaist je venderai nos .ii. chevaus et en ferai deniers; et je suis li miousdres boulengiers ke vous sacies; si ferai pain françois et je ne douc mie ke je ne gaagne bien et largement mon depens.

— Jehans, dist mesire Robiers, je m'otroi del tout a faire votre volente.

Et lendemain vendi Jehans ses .ii. chevaux .X. livres de tornois, et achata son ble et le fist muire, et achata des corbelles et coumencha a faire pain françois si bon et si bien fait k'il en vendoit plus ke li doi melleur boulengier de la ville; et fist tant dedens les .ii. ans k'il ot bien .c. livres de katel. Lors dist Jehans a son segnour:

— Je lo bien que nous louons une tres grant mason et jou akaterai del vin et hierbegerai la bonne gent.

— Jehan, dist mesire Robiers, faites a vo volente kar je l'otroi et si me loc molt de vous.

Jehans loua une mason grant et bielle, et si hierbrega la bonne gent et gaegnoit ases a plente, et viestoit son segnour biellement et richement; et avoit mesire Robiers son palefroi et aloit boire et

Much was Sir Robert grieved wh he came to Marseilles and found th there was no talk of anything doing the country; and he said to Joh 'What shall we do? You have lent m your money; I thank you, and w repay you, for I will sell my palfrey ar discharge the debt to you.'

'Sir,' said John, 'trust to me, if yo please, I will tell you what we will d I have still a hundred sous; if you plea I will sell our two horses and turn the into money; and I am the best bak you ever knew; I will make Frenc bread, and I've no doubt I shall pa my expenses well and make money.'

'John,' said Sir Robert, 'I agr wholly to do whatever you like.'

And the next day John sold their tw horses for ten pounds, and bought h wheat and had it ground, and bough baskets, and began to make Frenc bread so good and so well made th he sold more of it than the two be bakers in the city; and made so muc within two years that he had a goo hundred pounds property. Then h said to his lord: 'I advise our hiring very large house, and I will buy wir and will keep lodgings for good society

'John,' said Sir Robert, 'do what yo please, for I grant it, and am greati pleased with you.'

John hired a large and fine house ar lodged the best people and gained great plenty, and dressed his maste handsomely and richly; and Sir Robe kept his palfrey and went out to ea and drink with the best people of th

mengier aveukes les plus vallans de la ville; et Jehans li envoioit vins et viandes ke tout cil ki o lui conpagnoient s'en esmervelloient. Si gaegna tant ke dedens .iiii. ans il gaegna plus de .ccc. livres de meuble sains son harnois qui valoit bien .L. livres.

city; and John sent them such wines and food that all his companions marvelled at it. He made so much that within four years he gained more than three hundred pounds in money besides clothes, etc., well worth fifty.

The docile obedience of the man to the woman seemed as reasonable to the thirteenth century as the devotion of the woman to the man, not because she loved him, for there was no question of love, but because he was *her* man, and she owned him as though he were her child. The tale went on to develop her character always in the same sense. When she was ready, Jeanne broke up the establishment at Marseilles, brought her husband back to Hainault, and made him, without knowing her object, kill the traitor and redress her wrongs. Then after seven years' patient waiting, she revealed herself and resumed her place.

If you care to see the same type developed to its highest capacity, go to the theatre the first time some ambitious actress attempts the part of Lady Macbeth. Shakespeare realized the thirteenth-century woman more vividly than the thirteenth-century poets ever did; but that is no new thing to say of Shakespeare. The author of 'La Comtesse de Ponthieu' made no bad sketch of the character. These are fictions, but the Chronicles contain the names of women by scores who were the originals of the sketch. The society which Orderic described in Normandy — the generation of the first crusade — produced a great variety of Lady Macbeths. In the country of Evreux, about 1100, Orderic says that 'a worse than civil war was waged between two powerful brothers, and the mischief was fomented by the spiteful jealousy of their haughty wives. The Countess Havise of Evreux took offence at some taunts uttered by Isabel de Conches — wife of Ralph, the Seigneur of Conches, some ten miles from Evreux — and used all her influence with her husband, Count William, and his barons, to make trouble.... Both the ladies who stirred up these fierce enmities were great talkers and spirited as well as handsome; they ruled their

husbands, oppressed their vassals, and inspired terror in vario
ways. But still their characters were very different. Havi
had wit and eloquence, but she was cruel and avariciou
Isabel was generous, enterprising, and gay, so that she w
beloved and esteemed by those about her. She rode in knigh
armour when her vassals were called to war, and showed
much daring among men-at-arms and mounted knights
Camilla. . . .' More than three hundred years afterwards, f
off in the Vosges, from a village never heard of, appeared a co
mon peasant of seventeen years old, a girl without birth, educ
tion, wealth, or claim of any sort to consideration, who mad
her way to Chinon and claimed from Charles VII a commissio
to lead his army against the English. Neither the king nor th
court had faith in her, and yet the commission was given, an
the rank-and-file showed again that the true Frenchman ha
more confidence in the woman than in the man, no matt
what the gossips might say. No one was surprised when Jeann
did what she promised, or when the men burned her for doin
it. There were Jeannes in every village. Ridicule was powerle
against them. Even Voltaire became what the French ca
frankly 'bête,' in trying it.

Eleanor of Guienne was the greatest of all Frenchwome
Her decision was law, whether in Bordeaux or Poitiers, in Par
or in Palestine, in London or in Normandy; in the court
Louis VII, or in that of Henry II, or in her own Court of Lov
For fifteen years she was Queen of France; for fifty she wa
Queen in England; for eighty or thereabouts she was equivalen
to Queen over Guienne. No other Frenchwoman ever had suc
rule. Unfortunately, as Queen of France, she struck against a
authority greater than her own, that of Saint Bernard, and aft
combating it, with Suger's help, from 1137 until 1152, the mon
at last gained such mastery that Eleanor quitted the countr
and Suger died. She was not a person to accept defeat. Sh
royally divorced her husband and went back to her own king
dom of Guienne. Neither Louis nor Bernard dared to stop he
or to hold her territories from her, but they put the best fac
they could on their defeat by proclaiming her as a person

irregular conduct. The irregularity would not have stood in heir way, if they had dared to stand in hers, but Louis was nuch the weaker, and made himself weaker still by allowing ier to leave him for the sake of Henry of Anjou, a story of a sort hat rarely raised the respect in which French kings were held by French society. Probably politics had more to do with the matter than personal attachments, for Eleanor was a great uler, the equal of any ordinary king, and more powerful than nost kings living in 1152. If she deserted France in order to oin the enemies of France, she had serious reasons besides love or young Henry of Anjou; but in any case she did, as usual, vhat pleased her, and forced Louis to pronounce the divorce t a council held at Beaugency, March 18, 1152, on the usual pretext of relationship. The humours of the twelfth century vere Shakespearean. Eleanor, having obtained her divorce at Beaugency, to the deep regret of all Frenchmen, started at nce for Poitiers, knowing how unsafe she was in any territory ut her own. Beaugency is on the Loire, between Orleans and Blois, and Eleanor's first night was at Blois, or should have been; ut she was told, on arriving, that Count Thibaut of Blois, ndeterred by King Louis's experience, was making plans to etain her, with perfectly honourable views of marriage; and, s she seems at least not to have been in love with Thibaut, she vas obliged to depart at once, in the night, to Tours. A night ourney on horseback from Blois to Tours in the middle of March can have been no pleasure-trip, even in 1152; but, on rriving at Tours in the morning, Eleanor found that her lovers vere still so dangerously near that she set forward at once on the oad to Poitiers. As she approached her own territory she earned that Geoffrey of Anjou, the younger brother of her ntended husband, was waiting for her at the border, with views f marriage as strictly honourable as those of all the others. She vas driven to take another road, and at last got safe to oitiers.

About no figure in the Middle Ages, man or woman, did so nany legends grow, and with such freedom, as about Eleanor, vhose strength appealed to French sympathies and whose

adventures appealed to their imagination. They never forga
Louis for letting her go. They delighted to be told that
Palestine she had carried on relations of the most impro
character, now with a Saracen slave of great beauty; now w
Raymond of Poitiers, her uncle, the handsomest man of his tim
now with Saladin himself; and, as all this occurred at Antio
in 1147 or 1148, they could not explain why her husband shou
have waited until 1152 in order to express his unwilling d
approval; but they quoted with evident sympathy a rema
attributed to her that she thought she had married a king, a
found she had married a monk. To the Frenchman, Elean
remained always sympathetic, which is the more significa
because, in English tradition, her character suffered a viole
and incredible change. Although English history has lavish
on Eleanor somewhat more than her due share of convention
moral reproof, considering that, from the moment she marri
Henry of Anjou, May 18, 1152, she was never charged wi
a breath of scandal, it atoned for her want of wickedness
French standards, in the usual manner of historians, by inver
ing traits which reflected the moral standards of Englan
Tradition converted her into the fairy-book type of femini
jealousy and invented for her the legend of the Fair Rosamun
and the poison of toads.

For us, both legends are true. They reflected, not perhaps t
character of Eleanor, but what the society liked to see acted
its theatre of life. Eleanor's real nature in no way concerns u
The single fact worth remembering was that she had tw
daughters by Louis VII, as shown in the table; who, in due tim
married — Mary, in 1164, married Henry, the great Count
Champagne; Alix, at the same time, became Countess
Chartres by marriage with Thibaut, who had driven her moth
from Blois in 1152 by his marital intentions. Henry and Thiba
were brothers whose sister Alix had married Louis VII in 116
eight years after the divorce. The relations thus created we
fantastic, especially for Queen Eleanor, who, besides her tw
French daughters, had eight children as Queen of Englan
Her second son, Richard Coeur-de-Lion, born in 1157, w

affianced in 1174 to a daughter of Louis VII and Alix, a child only six years old, who was sent to England to be brought up as future queen. This was certainly Eleanor's doing, and equally certain was it that the child came to no good in the English court. The historians, by exception, have not charged this crime to Queen Eleanor; they charged it to Eleanor's husband, who passed most of his life in crossing his wife's political plans; but with politics we want as little as possible to do. We are concerned with the artistic and social side of life, and have only to notice the coincidence that while the Virgin was miraculously using the power of spiritual love to elevate and purify the people, Eleanor and her daughters were using the power of earthly love to discipline and refine the courts. Side by side with the crude realities about them, they insisted on teaching and enforcing an ideal that contradicted the realities, and had no value for them or for us except in the contradiction.

The ideals of Eleanor and her daughter Mary of Champagne were a form of religion, and if you care to see its evangels, you had best go directly to Dante and Petrarch, or, if you like it better, to Don Quixote de la Mancha. The religion is dead as Demeter, and its art alone survives as, on the whole, the highest expression of man's thought or emotion; but in its day it was almost as practical as it now is fanciful. Eleanor and her daughter Mary and her granddaughter Blanche knew as well as Saint Bernard did, or Saint Francis, what a brute the emancipated man could be; and as though they foresaw the society of the sixteenth and eighteenth centuries, they used every terror they could invent, as well as every tenderness they could invoke, to tame the beasts around them. Their charge was of manners, and, to teach manners, they made a school which they called their Court of Love, with a code of law to which they gave the name of 'courteous love.' The decisions of this court were recorded, like the decisions of a modern bench, under the names of the great ladies who made them, and were enforced by the ladies of good society for whose guidance they were made. They are worth reading, and any one who likes may read them to this day, with considerable scepticism about their genuineness.

The doubt is only ignorance. We do not, and never can, kno the twelfth-century woman, or, for that matter, any othe woman, but we do know the literature she created; we kno the art she lived in, and the religion she professed. We ca collect from them some idea why the Virgin Mary ruled, an what she was taken to be, by the world which worshipped he

Mary of Champagne created the literature of courteous lov She must have been about twenty years old when she marrie Count Henry and went to live at Troyes, not actually a quee in title, but certainly a queen in social influence. In 116 Champagne was a powerful country, and Troyes a centre o taste. In Normandy, at the same date, William of Saint Pai and Wace were writing the poetry we know. In Champagn the court poet was Christian of Troyes, whose poems were ne when the churches of Noyon and Senlis and Saint Leu d'Es serent, and the flèche of Chartres, and the Leaning Tower o Pisa, were building, at the same time with the Abbey of Vézela and before the church at Mantes. Christian died not long afte 1175, leaving a great mass of verse, much of which has survived and which you can read more easily than you can read Dante o Petrarch, although both are almost modern compared wit Christian. The quality of this verse is something like the qualit of the glass windows — conventional decoration; colours i conventional harmonies; refinement, restraint, and feminin delicacy of taste. Christian has not the grand manner of th eleventh century, and never recalls the masculine strength o the 'Chanson de Roland' or 'Raoul de Cambrai.' Even his mos charming story, 'Erec et Enide,' carries chiefly a moral o courtesy. His is poet-laureate's work, says M. Gaston Paris; th flower of a twelfth-century court and of twelfth-century French the best example of an admirable language; but not lyric neither strong, nor deep, nor deeply felt. What we call traged is unknown to it. Christian's world is sky-blue and rose, wit only enough red to give it warmth, and so flooded with ligh that even its mysteries count only by the clearness with whic they are shown.

Among other great works, before Mary of France came t

royes, Christian had, toward 1160, written a 'Tristan,' which lost. Mary herself, he says, gave him the subject of 'Lancelot,' ith the request or order to make it a lesson of 'courteous love,' hich he obeyed. Courtesy has lost its meaning as well as its harm, and you might find the 'Chevalier de la Charette' even nore unintelligible than tiresome; but its influence was great n its day, and the lesson of courteous love, under the authority f Mary of Champagne, lasted for centuries as the standard of aste. 'Lancelot' was never finished, but later, not long after 174, Christian wrote a 'Perceval,' or 'Conte du Graal,' which nust also have been intended to please Mary, and which is nteresting because, while the 'Lancelot' gave the twelfth-entury idea of courteous love, the 'Perceval' gave the twelfth-entury idea of religious mystery. Mary was certainly con-erned with both. 'It is for this same Mary,' says Gaston Paris, hat Walter of Arras undertook his poem of "Eracle"; she was ne object of the songs of the troubadours as well as of their rench imitators; for her use also she caused the translations of ooks of piety likes Genesis, or the paraphrase at great length, n verse, of the psalm "Eructavit."'

With her theories of courteous love, every one is more or less miliar if only from the ridicule of Cervantes and the follies of Quixote, who, though four hundred years younger, was Lance-ot's child; but we never can know how far she took herself and er laws of love seriously, and to speculate on so deep a subject s her seriousness is worse than useless, since she would herself ave been as uncertain as her lovers were. Visionary as the ourtesy was, the Holy Grail was as practical as any bric-à-brac nat has survived of the time. The mystery of Perceval is like nat of the Gothic cathedral, illuminated by floods of light, nd enlivened by rivers of colour. Unfortunately Christian ever told what he meant by the fragment, itself a mystery, n which he narrated the story of the knight who saw the Holy Grail, because the knight, who was warned, as usual, to ask no uestions, for once, unlike most knights, obeyed the warning hen he should have disregarded it. As knights-errant neces-arily did the wrong thing in order to make their adventures

possible, Perceval's error cannot be in itself mysterious, i
was the castle in any way mysterious where the miracle occurr
It appeared to him to be the usual castle, and he saw nothi
unusual in the manner of his reception by the usual old lord,
in the fact that both seated themselves quite simply before t
hall-fire with the usual household. Then, as though it were
everyday habit, the Holy Grail was brought in (Barts
'Chrestomathie,' 183–85, ed. 1895):

Et leans avait luminaire	And, within, the hall was bright
Si grant con l'an le porrait faire	As any hall could be with light
De chandoiles a un ostel.	Of candles in a house at night.
Que qu'il parloient d'un et d'el,	So, while of this and that they talke
Uns vallez d'une chambre vint	A squire from a chamber walked,
Qui une blanche lance tint	Bearing a white lance in his hand,
Ampoigniee par le mi lieu.	Grasped by the middle, like a wand
Si passa par endroit le feu	And, as he passed the chimney wide
Et cil qui al feu se seoient,	Those seated by the fireside,
Et tuit cil de leans veoient	And all the others, caught a glance
La lance blanche et le fer blanc.	Of the white steel and the white lan
S'issoit une gote de sang	As they looked, a drop of blood
Del fer de la lance au sommet,	Down the lance's handle flowed;
Et jusqu'a la main au vaslet	Down to where the youth's hand sto
Coroit cele gote vermoille....	From the lance-head at the top
A tant dui autre vaslet vindrent	They saw run that crimson drop....
Qui chandeliers an lors mains tindrent	Presently came two more squires,
De fin or ovrez a neel.	In their hands two chandeliers,
Li vaslet estoient moult bel	Of fine gold in enamel wrought.
Qui les chandeliers aportoient.	Each squire that the candle brought
An chacun chandelier ardoient	Was a handsome chevalier.
Dous chandoiles a tot le mains.	There burned in every chandelier
Un graal antre ses dous mains	Two lighted candles at the least.
Une demoiselle tenoit,	A damsel, graceful and well dressed,
Qui avec les vaslets venoit,	Behind the squires followed fast
Bele et gente et bien acesmee.	Who carried in her hands a graal;
Quant ele fu leans antree	And as she came within the hall
Atot le graal qu'ele tint	With the graal there came a light
Une si granz clartez i vint	So brilliant that the candles all
Qu'ausi perdirent les chandoiles	Lost clearness, as the stars at night
Lor clarte come les estoiles	When moon shines, or in day the su
Qant li solauz luist et la lune.	
Apres celi an revint une	After her there followed one
Qui tint un tailleor d'argent.	Who a dish of silver bore.
Le graal qui aloit devant	The graal, which had gone before,
De fin or esmere estoit,	Of gold the finest had been made,
Pierres precieuses avoit	With precious stones had been inlaid
El graal de maintes menieres	Richest and rarest of each kind

Des plus riches et des plus chieres
Qui en mer ne en terre soient.
Totes autres pierres passoient
Celes del graal sanz dotance.
Tot ainsi con passa la lance
Par devant le lit trespasserent
Et d'une chambre a l'autre alerent.
Et li vaslet les vit passer,
Ni n'osa mire demander
Del graal cui l'an an servoit.

That man in sea or earth could find.
All other jewels far surpassed
Those which the holy graal enchased.

Just as before had passed the lance
They all before the bed advance,
Passing straightway through the hall,
And the knight who saw them pass
Never ventured once to ask
For the meaning of the graal.

The simplicity of this narration gives a certain dramatic effect to the mystery, like seeing a ghost in full daylight, but Christian carried simplicity further still. He seemed either to feel, or to want others to feel, the reality of the adventure and the miracle, and he followed up the appearance of the graal by a solid meal in the style of the twelfth century, such as one expects to find in 'Ivanhoe' or the 'Talisman.' The knight sat down with his host to the best dinner that the county of Champagne afforded, and they ate their haunch of venison with the graal in full view. They drank their Champagne wine of various sorts, out of gold cups:

Vins clers ne raspez ne lor faut
A copes dorees a boivre;

They sat before the fire and talked till bedtime, when the squires made up the beds in the hall, and brought in supper — dates, figs, nutmegs, spices, pomegranates, and at last lectuaries, suspiciously like what we call jams; and 'alexandrine gingerbread'; after which they drank various drinks, with or without spice or honey or pepper; and old moret, which is thought to be mulberry wine, but which generally went with clairet, a colourless grape-juice, or piment. At least, here are the lines, and one may translate them to suit one's self:

Et li vaslet aparellierent
Les lis et le fruit au colchier
Que il en i ot de moult chier,
Dates, figues, et nois mugates,
Girofles et pomes de grenates,
Et leituaires an la fin,
Et gingenbret alixandrin.
Apres ce burent de maint boivre,
Piment ou n'ot ne miel ne poivre
Et viez more et cler sirop.

The twelfth century had the child's love of sweets and spic and preserved fruits, and drinks sweetened or spiced, whetl they were taken for supper or for poetry; the true knight's pal was fresh and his appetite excellent either for sweets or ver or love; the world was young then; Robin Hoods lived in eve forest, and Richard Coeur-de-Lion was not yet twenty years o The pleasant adventures of Robin Hood were real, as you c read in the stories of a dozen outlaws, and men troubled the selves about pain and death much as healthy bears did, in t mountains. Life had miseries enough, but few shadows deep than those of the imaginative lover, or the terrors of ghosts night. Men's imaginations ran riot, but did not keep the awake; at least, neither the preserved fruits nor the mulber wine nor the clear syrup nor the gingerbread nor the Ho Graal kept Perceval awake, but he slept the sound and healt sleep of youth, and when he woke the next morning, he felt on a mild surprise to find that his host and household had di appeared, leaving him to ride away without farewell, breakfas or Graal.

Christian wrote about Perceval in 1174 in the same spirit i which the workmen in glass, thirty years later, told the sto of Charlemagne. One artist worked for Mary of Champagn the others for Mary of Chartres, commonly known as the Virgi but all did their work in good faith, with the first, fresh, eas instinct of colour, light, and line. Neither of the two Mari was mystical, in a modern sense; none of the artists was o pressed by the burden of doubt; their scepticism was as childlik as faith. If one has to make an exception, perhaps the passio of love was more serious than that of religion, and gave religion the deepest emotion, and the most complicated on which society knew. Love was certainly a passion; and eve more certainly it was, as seen in poets like Dante and Petrarch – in romans like 'Lancelot' and 'Aucassin' — in ideals like th Virgin — complicated beyond modern conception. For th reason the loss of Christian's 'Tristan' makes a terrible gap i art, for Christian's poem would have given the first and be idea of what led to courteous love. The 'Tristan' was writte

before 1160, and belonged to the cycle of Queen Eleanor of England rather than to that of her daughter Mary of Troyes; but the subject was one neither of courtesy nor of France; it belonged to an age far behind the eleventh century, or even the tenth, or indeed any century within the range of French history; and it was as little fitted for Christian's way of treatment as for any avowed burlesque. The original Tristan — critics say — was not French, and neither Tristan nor Isolde had ever a drop of French blood in their veins. In their form as Christian received it, they were Celts or Scots; they came from Brittany, Wales, Ireland, the northern ocean, or farther still. Behind the Welsh Tristan, which passed probably through England to Normandy and thence to France and Champagne, critics detect a far more ancient figure living in a form of society that France could not remember ever to have known. King Marc was a tribal chief of the Stone Age whose subjects loved the forest and lived on the sea or in caves; King Marc's royal hall was a common shelter on the banks of a stream, where every one was at home, and king, queen, knights, attendants, and dwarf slept on the floor, on beds laid down where they pleased; Tristan's weapons were the bow and stone knife; he never saw a horse or a spear; his ideas of loyalty and Isolde's ideas of marriage were as vague as Marc's royal authority; and all were alike unconscious of law, chivalry, or church. The note they sang was more unlike the note of Christian, if possible, than that of Richard Wagner; it was the simplest expression of rude and primitive love, as one could perhaps find it among North American Indians, though hardly so defiant even there, and certainly in the Icelandic Sagas hardly so lawless; but it was a note of real passion, and touched the deepest chords of sympathy in the artificial society of the twelfth century, as it did in that of the nineteenth. The task of the French poet was to tone it down and give it the fashionable dress, the pointed shoes and long sleeves, of the time. 'The Frenchman,' says Gaston Paris, 'is specially interested in making his story entertaining for the society it is meant for; he is "social"; that is, of the world; he smiles at the adventures he tells, and delicately

lets you see that he is not their dupe; he exerts himself to giv to his style a constant elegance, a uniform polish, in which a fe neatly turned, clever phrases sparkle here and there; above al he wants to please, and thinks of his audience more than of hi subject.'

In the twelfth century he wanted chiefly to please women, a Orderic complained; Isolde came out of Brittany to mee Eleanor coming up from Guienne, and the Virgin from th east; and all united in giving law to society. In each case it wa the woman, not the man, who gave the law; — it was Mary, no the Trinity; Eleanor, not Louis VII; Isolde, not Tristan. N doubt, the original Tristan had given the law like Roland o Achilles, but the twelfth-century Tristan was a comparativel poor creature. He was in his way a secondary figure in th romance, as Louis VII was to Eleanor and Abélard to Héloïse Every one knows how, about twenty years before Eleanor cam to Paris, the poet-professor Abélard, the hero of the Lati Quarter, had sung to Héloïse those songs which — he tells us — resounded through Europe as widely as his scholastic fame, an probably to more effect for his renown. In popular notion Héloïse was Isolde, and would in a moment have done wha Isolde did (Bartsch, 107–08):

Quaint reis Marcs nus out conjeies	When King Marc had banned us both
E de sa curt nus out chascez,	And from his court had chased us forth
As mains ensemble nus preismes	Hand in hand each clasping fast
E hors de la sale en eissimes,	Straight from out the hall we passed;
A la forest puis en alasmes	To the forest turned our face;
E un mult bel liu i trouvames	Found in it a perfect place,
E une roche, fu cavee,	Where the rock that made a cave
Devant ert estraite la entree,	Hardly more than passage gave;
Dedans fu voesse ben faite,	Spacious within and fit for use,
Tante bel cum se fust purtraite.	As though it had been planned for us.

At any time of her life, Héloïse would have defied society o church, and would — at least in the public's fancy — have take Abélard by the hand and gone off to the forest much mor readily than she went to the cloister; but Abélard would hav made a poor figure as Tristan. Abélard and Christian of Troye were as remote as we are from the legendary Tristan; but Isold

and Héloïse, Eleanor and Mary were the immortal and eternal woman. The legend of Isolde, both in the earlier and the later version, seems to have served as a sacred book to the women of the twelfth and thirteenth centuries, and Christian's Isolde surely helped Mary in giving law to the Court of Troyes and decisions in the Court of Love.

Countess Mary's authority lasted from 1164 to 1198, thirty-four years, during which, at uncertain intervals, glimpses of her influence flash out in poetry rather than in prose. Christian began his 'Roman de la Charette' by invoking her:

Puisque ma dame de Chanpaigne
Vialt que romans a faire anpraigne
. . . . . .
Si deist et jel tesmoignasse
Que ce est la dame qui passe
Totes celes qui sont vivanz
Si con li funs passe les vanz
Qui vante en Mai ou en Avril
. . . . . .
Dirai je: tant com une jame
Vaut de pailes et de sardines
Vaut la contesse de reïnes?

Christian chose curious similes. His dame surpassed all living rivals as smoke passes the winds that blow in May; or as much as a gem would buy of straws and sardines is the Countess worth in queens. Louis XIV would have thought that Christian might be laughing at him, but court styles changed with their masters. Louis XIV would scarcely have written a prison-song to his sister such as Richard Coeur-de-Lion wrote to Mary of Champagne:

Ja nus hons pris ne dirat sa raison	No prisoner can tell his honest thought
Adroitement s'ansi com dolans non;	Unless he speaks as one who suffers wrong;
Mais par confort puet il faire chanson.	But for his comfort he may make a song.
Moult ai d'amins, mais povre sont li don;	My friends are many, but their gifts are naught.
Honte en avront se por ma rëançon	Shame will be theirs, if, for my ransom, here
Suix ces deus yvers pris.	I lie another year.
Ceu sevent bien mi home et mi baron,	They know this well, my barons and my men,

Englois, Normant, Poitevin et Gascon,
Ke je n'avoie si povre compaingnon
Cui je laissasse por avoir an prixon.

Je nel di pas por nulle retraison,
Mais ancor suix je pris.

Or sai ge bien de voir certainement

Ke mors ne pris n'ait amin ne parent,

Cant on me lait por or ne por argent.

Moult m'est de moi, mais plus m'est de ma gent
C'apres ma mort avront reprochier grant
Se longement suix pris.

N'est pas mervelle se j'ai lo cuer dolent

Cant li miens sires tient ma terre en torment.
S'or li menbroit de nostre sairement

Ke nos fèismes andui communament,

Bien sai de voir ke ceans longement

Ne seroie pas pris.

Ce sevent bien Angevin et Torain,

Cil bacheler ki or sont fort et sain,

C'ancombreis suix long d'aus en autrui main.
Forment m'amoient, mais or ne m'aimment grain.
De belles armes sont ores veut cil plain,

Por tant ke je suix pris.

Mes compaingnons cui j'amoie et cui j'aim,
Ces dou Caheu et ces dou Percherain,

Me di, chanson, kil ne sont pas certain,

Normandy, England, Gascony, Poito
That I had never follower so low
Whom I would leave in prison to n
gain.
I say it not for a reproach to them,
But prisoner I am!

The ancient proverb now I know f
sure:
Death and a prison know nor kin n
tie,
Since for mere lack of gold they let m
lie.
Much for myself I grieve; for them sti
more.
After my death they will have grievou
wrong
If I am prisoner long.

What marvel that my heart is sad an
sore
When my own lord torments m
helpless lands!
Well do I know that, if he held hi
hands,
Remembering the common oath w
swore,
I should not here imprisoned with m
song,
Remain a prisoner long.

They know this well who now are rich
and strong
Young gentlemen of Anjou and
Touraine,
That far from them, on hostile bonds
I strain.
They loved me much, but have no
loved me long.
Their plains will see no more fair lists
arrayed,
While I lie here betrayed.

Companions whom I loved, and still do
love,
Geoffroi du Perche and Ansel de
Caïeux,
Tell them, my song, that they are
friends untrue.

C'onques vers aus n'en oi cuer faus ne vain.	Never to them did I false-hearted prove;
S'il me guerroient, il font moult que vilain	But they do villainy if they war on me,
Tant com je serai pris.	While I lie here, unfree.
Comtesse suer, vostre pris soverain	Countess sister! your sovereign fame
Vos saut et gart cil a cui je me claim	May he preserve whose help I claim,
Et par cui je suix pris.	Victim for whom am I!
Je n'ou di pas de celi de Chartain	I say not this of Chartres' dame,
Le meire Lowëis.	Mother of Louis!

Richard's prison-song, one of the chief monuments of English literature, sounds to every ear, accustomed to twelfth-century verse, as charming as when it was household rhyme to

mi ome et mi baron
Englois, Normant, Poitevin et Gascon.

Not only was Richard a far greater king than any Louis ever was, but he also composed better poetry than any other king who is known to tourists, and, when he spoke to his sister in this cry of the heart altogether singular among monarchs, he made law and style, above discussion. Whether he meant to reproach his other sister, Alix of Chartres, historians may tell, if they know. If he did, the reproach answered its purpose, for the song was written in 1193; Richard was ransomed and released in 1194; and in 1198 the young Count 'Loweis' of Chartres and Blois leagued with the Counts of Flanders, Le Perche, Guines, and Toulouse, against Philip Augustus, in favor of Coeur-de-Lion to whom they rendered homage. In any case, neither Mary nor Alice in 1193 was reigning Countess. Mary was a widow since 1181, and her son Henry was Count in Champagne, apparently a great favourite with his uncle Richard Coeur-de-Lion. The life of this Henry of Champagne was another twelfth-century romance, but can serve no purpose here except to recall the story that his mother, the great Countess Mary, died in 1198 of sorrow for the death of this son, who was then King of Jerusalem, and was killed, in 1197, by a fall from the window of his palace at Acre. Coeur-de-Lion died in 1199. In 1201, Mary's other son, who succeeded Henry — Count Thibaut III — died, leaving a posthumous heir, famous in the thirteenth

century as Thibaut-le-Grand — the Thibaut of Queen Blanche

They were all astonishing — men and women — and fille the world, for two hundred years, with their extraordinary energy and genius; but the greatest of all was old Queen Eleanor who survived her son Coeur-de-Lion, as well as her two husbands — Louis-le-Jeune and Henry II Plantagenet — and wa left in 1200 still struggling to repair the evils and fend off th dangers they caused. 'Queen by the wrath of God,' she calle herself, and she knew what just claim she had to the rank. O her two husbands and ten children, little remained except her son John, who, by the unanimous voice of his family, his friends, his enemies, and even his admirers, achieved a reputation for excelling in every form of twelfth-century crime. He was a liar and a traitor, as was not uncommon, but he was thought to be also a coward, which, in that family, was singular. Some redeeming quality he must have had, but none is recorded. His mother saw him running, in his masculine, twelfth-century recklessness, to destruction, and she made a last and a characteristic effort to save him and Guienne by a treaty of amity with the French king, to be secured by the marriage of the heir of France, Louis, to Eleanor's granddaughter, John's niece, Blanche of Castile, then twelve or thirteen years old. Eleanor herself was eighty, and yet she made the journey to Spain, brought back the child to Bordeaux, affianced her to Louis VIII as she had herself been affianced in 1137 to Louis VII, and in May, 1200, saw her married. The French had then given up their conventional trick of attributing Eleanor's acts to her want of morals; and France gave her — as to most women after sixty years old — the benefit of the convention which made women respectable after they had lost the opportunity to be vicious. In French eyes, Eleanor played out the drama according to the rules. She could not save John, but she died in 1202, before his ruin, and you can still see her lying with her husband and her son Richard at Fontevrault in her twelfth-century tomb.

In 1223, Blanche became Queen of France. She was thirty-six years old. Her husband, Louis VIII, was ambitious to rival

his father, Philip Augustus, who had seized Normandy in 1203. Louis undertook to seize Toulouse and Avignon. In 1225, he set out with a large army in which, among the chief vassals, his cousin Thibaut of Champagne led a contingent. Thibaut was five-and-twenty years old, and, like Pierre de Dreux, then Duke of Brittany, was one of the most brilliant and versatile men of his time, and one of the greatest rulers. As royal vassal Thibaut owed forty days' service in the field; but his interests were at variance with the King's, and at the end of the term he marched home with his men, leaving the King to fall ill and die in Auvergne, November 8, 1226, and a child of ten years old to carry on the government as Louis IX.

Chartres Cathedral has already told the story twice, in stone and glass; but Thibaut does not appear there, although he saved the Queen. Some member of the royal family must be regent. Queen Blanche took the place, and of course the princes of the blood, who thought it was their right, united against her. At first, Blanche turned violently on Thibaut and forbade him to appear at the coronation at Rheims in his own territory, on November 29, as though she held him guilty of treason; but when the league of great vassals united to deprive her of the regency, she had no choice but to detach at any cost any member of the league, and Thibaut alone offered help. What price she paid him was best known to her; but what price she would be believed to have paid him was as well known to her as what had been said of her grandmother Eleanor when she changed her allegiance in 1152. If the scandal had concerned Thibaut alone, she might have been well content, but Blanche was obliged also to pay desperate court to the papal legate. Every member of her husband's family united against her and libelled her character with the freedom which enlivened and envenomed royal tongues.

> Maintes paroles en dit en
> Comme d'Iseult et de Tristan.

Had this been all, she would have cared no more than Eleanor or any other queen had cared, for in French drama, real or imaginary, such charges were not very serious and hardly un-

complimentary; but Iseult had never been accused, over and above her arbitrary views on the marriage-contract, of acting as an accomplice with Tristan in poisoning King Marc. French convention required that Thibaut should have poisoned Louis VIII for love of the Queen, and that this secret reciprocal love should control their lives. Fortunately for Blanche she was a devout ally of the Church, and the Church believed evil only of enemies. The legate and the prelates rallied to her support and after eight years of desperate struggle they crushed Pierre Mauclerc and saved Thibaut and Blanche.

For us the poetry is history, and the facts are false. French art starts not from facts, but from certain assumptions as conventional as a legendary window, and the commonest convention is the Woman. The fact, then as now, was Power, or its equivalent in exchange, but Frenchmen, while struggling for the Power, expressed it in terms of Art. They looked on life as a drama — and on drama as a phase of life — in which the bystanders were bound to assume and accept the regular stage-plot. That the plot might be altogether untrue to real life affected in no way its interest. To them Thibaut and Blanche were bound to act Tristan and Isolde. Whatever they were when off the stage, they were lovers on it. Their loves were as real and as reasonable as the worship of the Virgin. Courteous love was avowedly a form of drama, but not the less a force of society. Illusion for illusion, courteous love, in Thibaut's hands, or in the hands of Dante and Petrarch, was as substantial as any other convention; — the balance of trade, the rights of man, or the Athanasian Creed. In that sense the illusions alone were real; if the Middle Ages had reflected only what was practical, nothing would have survived for us.

Thibaut was Tristan, and is said to have painted his verses on the walls of his château. If he did, he painted there, in the opinion of M. Gaston Paris, better poetry than any that was written on paper or parchment, for Thibaut was a great prince and great poet who did in both characters whatever he pleased. In modern equivalents, one would give much to see the château again with the poetry on its walls. Provins has lost the verses,

ut Troyes still keeps some churches and glass of Thibaut's ime which hold their own with the best. Even of Thibaut himelf, something survives, and though it were only the memories f his seneschal, the famous Sire de Joinville, history and France would be poor without him. With Joinville in hand, you may till pass an hour in the company of these astonishing thirteenthcentury men and women: crusaders who fight, hunt, make ove, build churches, put up glass windows to the Virgin, buy missals, talk scholastic philosophy, compose poetry; Blanche Thibaut, Perron, Joinville, Saint Louis, Saint Thomas, Saint Dominic, Saint Francis — you may know them as intimately as ou can ever know a world that is lost; and in the case of Thibaut you may know more, for he is still alive in his poems; e even vibrates with life. One might try a few verses, to see vhat he meant by courtesy. Perhaps he wrote them for Queen Blanche, but, to whomever he sent them, the French were right n thinking that she ought to have returned his love (edition of 742):

Nus hom ne puet ami reconforter	There is no comfort to be found for pain
Se cele non ou il a son cuer mis.	Save only where the heart has made its home.
Pour ce m'estuet sovent plaindre et plourer	Therefore I can but murmur and complain
Que nus confors ne me vient, ce m'est vis,	Because no comfort to my pain has come
De la ou j'ai tote ma remembrance.	From where I garnered all my happiness.
Pour bien amer ai sovent esmaiance	From true love have I only earned distress
A dire voir.	The truth to say.
Dame, merci! donez moi esperance De joie avoir.	Grace, lady! give me comfort to possess A hope, one day.
Ce ne puis pas sovent a li parler	Seldom the music of her voice I hear
Ne remirer les biaus iex de son vis.	Or wonder at the beauty of her eyes.
Ce pois moi que je n'i puis aler	It grieves me that I may not follow there
Car ades est mes cuers ententis.	Where at her feet my heart attentive lies.
Ho! bele riens, douce sans conoissance,	Oh, gentle Beauty without consciousness,

Car me mettez en millor attendance
De bon espoir!
Dame, merci! donez moi esperance
De joie avoir.

Aucuns si sont qui me vuelent blame:
Quant je ne di a qui je suis amis;
Mais ja, dame, ne saura mon penser
Nus qui soit nes fors vous cui je le dis
Couardement a pavours a doutance
Dont puestes vous lors bien a ma semblance
Mon cuer savoir.
Dame, merci! donez moi esperance
De joie avoir.

Let me once feel a moment's hopefulness,
If but one ray!
Grace, lady! give me comfort to possess
A hope, one day.

Certain there are who blame upon me throw
Because I will not tell whose love I seek;
But truly, lady, none my thought shall know,
None that is born, save you to whom I speak
In cowardice and awe and doubtfulness,
That you may happily with fearlessness
My heart essay.
Grace, lady! give me comfort to possess
A hope, one day.

Does Thibaut's verse sound simple? It is the simplicity of the thirteenth-century glass — so refined and complicated that sensible people are mostly satisfied to feel, and not to understand. Any blunderer in verse, who will merely look at the rhymes of these three stanzas, will see that simplicity is about as much concerned there as it is with the windows of Chartres; the verses are as perfect as the colours, and the versification as elaborate. These stanzas might have been addressed to Queen Blanche; now see how Thibaut kept the same tone of courteous love in addressing the Queen of Heaven!

De grant travail et de petit esploit
Voi ce siegle cargie et encombre
Que tant somes plain de maleurte
Ke nus ne pens a faire ce qu'il doit,
Ains avons si le Deauble trouve
Qu'a lui servir chascuns paine et essaie
Et Diex ki ot pour nos ja cruel plaie
Metons arrier et sa grant dignite;

With travail great, and little cargo fraught,
See how our world is labouring in pain;
So filled we are with love of evil gain
That no one thinks of doing what he ought,
But we all hustle in the Devil's train,
And only in his service toil and pray;
And God, who suffered for us agony,
We set behind, and treat him with disdain;

olt est hardis qui pour mort ne s'esmaie.

iex que tout set et tout puet et tout voit
Nous auroit tost en entre-deus giete

Se la Dame plaine de grant bonte

rdelez lui pour nos ne li prioit

Si tres douc mot plaisant et savoure

e grant courous dou grant Signour apaie;
olt par est fox ki autre amor essai
K'en cestui n'a barat ne fausete

è es autres n'a ne merci ne manaie.

a souris quiert pour son cors garandir
Contre l'yver la noif et le forment

Et nous chaitif nous n'alons rien querant
uant nous morrons ou nous puissions garir.
Nous ne cherchons fors k'infer le puant;
r esgardes come beste sauvage

urvoit de loin encontre son domage
Et nous n'avons ne sens ne hardement;
est avis que plain somes de rage.

Deable a getey por nos ravir
Quatre ameçons aeschies de torment;

Covoitise lance premierement
puis Orguel por sa grant rois emplir

Et Luxure va le batel trainant
lonie les governe et les nage.

Hardy is he whom death does not dismay.

God who rules all, from whom we can hide nought,
Had quickly flung us back to nought again
But that our gentle, gracious, Lady Queen
Begged him to spare us, and our pardon wrought;
Striving with words of sweetness to restrain
Our angry Lord, and his great wrath allay.
Felon is he who shall her love betray
Which is pure truth, and falsehood cannot feign,
While all the rest is lie and cheating play.

The feeble mouse, against the winter's cold,
Garners the nuts and grain within his cell,
While man goes groping, without sense to tell
Where to seek refuge against growing old.
We seek it in the smoking mouth of Hell.
With the poor beast our impotence compare!
See him protect his life with utmost care,
While us nor wit nor courage can compel
To save our souls, so foolish mad we are.

The Devil doth in snares our life enfold;
Four hooks has he with torments baited well;
And first with Greed he casts a mighty spell,
And then, to fill his nets, has Pride enrolled,
And Luxury steers the boat, and fills the sail,
And Perfidy controls and sets the snare;

Ensi peschant s'en viegnent au rivage
Dont Diex nous gart par son commandement
En qui sains fons nous feismes homage.

Thus the poor fish are brought to land and there
May God preserve us and the fc repel!
Homage to him who saves us fror despair!

A la Dame qui tous les biens avance
T'en va, chançon s'el te vielt escouter
Onques ne fu nus de millor chaunce.

To Mary Queen, who passes all com pare,
Go, little song! to her your sorrow tell!
Nor Heaven nor Earth holds happines so rare.

XII. Nicolette and Marion

C'est d'Aucassins et de Nicolete.

Qui vauroit bons vers oir
Del deport du viel caitif
De deus biax enfans petis
Nicolete et Aucassins;
Des grans paines qu'il soufri
Et des proueces qu'il fist
Por s'amie o le cler vis.
Dox est li cans biax est li dis
Et cortois et bien asis.
Nus hom n'est si esbahis
Tant dolans ni entrepris
De grant mal amaladis
Se il l'oit ne soit garis
Et de joie resbaudis
Tant par est dou-ce.

This is of Aucassins and Nicolette.

Whom would a good ballad please
By the captive from o'er-seas,
A sweet song in children's praise,
Nicolette and Aucassins;
What he bore for her caress,
What he proved of his prowess
For his friend with the bright face?
The song has charm, the tale has grace,
And courtesy and good address.
No man is in such distress,
Such suffering or weariness,
Sick with ever such sickness,
But he shall, if he hear this,
Recover all his happiness,
So sweet it is!

THIS little thirteenth-century gem is called a 'chantefable,' a story partly in prose, partly in verse, to be sung according to musical notation accompanying the words n the single manuscript known, and published in facsimile by Mr. F. W. Bourdillon at Oxford in 1896. Indeed, few poems, ld or new, have in the last few years been more reprinted, ranslated, and discussed, than 'Aucassins,' yet the discussion acks interest to the idle tourist, and tells him little. Nothing is nown of the author or his date. The second line alone offers hint, but nothing more. 'Caitif' means in the first place captive, and secondly any unfortunate or wretched man. Critics have liked to think that the word means here a captive o the Saracens, and that the poet, like Cervantes three or four undred years later, may have been a prisoner to the infidels.

What the critics can do, we can do. If liberties can be taken with impunity by scholars, we can take the liberty of supposing that the poet was a prisoner in the crusade of Coeur-de-Lion and Philippe-Auguste; that he had recovered his liberty, with his master, in 1194; and that he passed the rest of his life singing to the old Queen Eleanor or to Richard, at Chinon, and to the lords of all the châteaux in Guienne, Poitiers, Anjou, and Normandy, not to mention England. The living was a pleasant one, as the sunny atmosphere of the Southern poetry proves.

> Dox est li cans; biax est li dis,
> Et cortois et bien asis.

The poet-troubadour who composed and recited 'Aucassins' could not have been unhappy, but this is the affair of his private life, and not of ours. What rather interests us is his poetic motive, 'courteous love,' which gives the tale a place in the direct line between Christian of Troyes, Thibaut-le-Grand, and William of Lorris. Christian of Troyes died in 1175; at least he wrote nothing of a later date, so far as is certainly known. Richard Coeur-de-Lion died in 1199, very soon after the death of his half-sister Mary of Champagne. Thibaut-le-Grand was born in 1201. William of Lorris, who concluded the line of great 'courteous' poets, died in 1260 or thereabouts. For our purposes, 'Aucassins' comes between Christian of Troyes and William of Lorris; the trouvère or jogléor, who sang, was a 'viel caitif' when the Chartres glass was set up, and the Charlemagne window designed, about 1210, or perhaps a little later. When one is not a professor, one has not the right to make inept guesses, and, when one is not a critic, one should not risk confusing a difficult question by baseless assumptions; but even a summer tourist may without offence visit his churches in the order that suits him best; and, for our tour, 'Aucassins' follows Christian and goes hand in hand with Blondel and the châtelain de Coucy, as the most exquisite expression of 'courteous love.' As one of 'Aucassins'' German editors says in his introduction: 'Love is the medium through which alone the hero surveys the world around him, and for which he contemns everything that the age

prized: knightly honour; deeds of arms; father and mother; hell, and even heaven; but the mere promise by his father of a kiss from Nicolette inspires him to superhuman heroism; while the old poet sings and smiles aside to his audience as though he wished them to understand that Aucassins, a foolish boy, must not be judged quite seriously, but that, old as he was himself, he was just as foolish about Nicolette.'

Aucassins was the son of the Count of Beaucaire. Nicolette was a young girl whom the Viscount of Beaucaire had redeemed as a captive of the Saracens, and had brought up as a god-daughter in his family. Aucassins fell in love with Nicolette, and wanted to marry her. The action turned on marriage, for, to the Counts of Beaucaire, as to other counts, not to speak of kings, high alliance was not a matter of choice but of necessity, without which they could not defend their lives, let alone their counties; and, to make Aucassins' conduct absolutely treasonable, Beaucaire was at that time surrounded and besieged, and the Count, Aucassins' father, stood in dire need of his son's help. Aucassins refused to stir unless he could have Nicolette. What were honours to him if Nicolette were not to share them. 'S'ele estait empereris de Colstentinoble u d'Alemaigne u roine de France u d'Engletere, si aroit il asses peu en li, tant est france et cortoise et de bon aire et entecie de toutes bones teces.' To be empress of 'Colstentinoble' would be none too good for her, so stamped is she with nobility and courtesy and high-breeding and all good qualities.

So the Count, after a long struggle, sent for his Viscount and threatened to have Nicolette burned alive, and the Viscount himself treated no better, if he did not put a stop to the affair; and the Viscount shut up Nicolette, and remonstrated with Aucassins: 'Marry a king's daughter, or a count's! leave Nicolette alone, or you will never see Paradise!' This at once gave Aucassins the excuse for a charming tirade against Paradise, for which, a century or two later, he would properly have been burned together with Nicolette:

En paradis qu'ai je a faire? Je n'i quier entrer mais que j'aie Nicolete,	In Paradise what have I to do? I do not care to go there unless I may have

ma tres douce amie, que j'aim tant. C'en paradis ne vont fors tex gens con je vous dirai. Il i vont ci viel prestre et cil vieil clop et cil manke, qui tote jour et tote nuit cropent devant ces autex et en ces vies cruutes, et cil a ces vies capes ereses et a cès vies tatereles vestues, qui sont nu et decauc et estrumele, qui moeurent de faim et d'esci et de froid et de mesaises. Icil vont en paradis; aveuc ciax n'ai jou que faire; mais en infer voil jou aler. Car en infer vont li bel clerc et li bel cevalier qui sont mort as tornois et as rices gueres, et li bien sergant et li franc home. Aveuc ciax voil jou aler. Et si vont les beles dames cortoises que eles ont ii amis ou iii avec leurs barons. Et si va li ors et li agens et li vairs et li gris; et si i vont herpeor et jogleor et li roi del siecle. Avec ciax voil jou aler mais que j'aie Nicolete, ma tres douce amie, aveuc moi.

Nicolette, my very sweet friend, whom I love so much. For to Paradise goes no one but such people as I will tell you of. There go old priests and old cripples and the maimed, who all day and all night crouch before altars and in old crypts, and are clothed with old worn out capes and old tattered rags; who are naked and footbare and sore; who die of hunger and want and misery. These go to Paradise; with them I have nothing to do; but to Hell I am willing to go. For, to Hell go the fine scholars and the fair knights who die in tournies and in glorious wars; and the good men-at-arms and the well-born. With them I will gladly go. And there go the fair courteous ladies whether they have two or three friends besides their lords. And the gold and silver go there, and the ermines and sables; and there go the harpers and jongleurs, and the kings of the world. With these will I go, if only I may have Nicolette, my very sweet friend, with me.

Three times, in these short extracts, the word 'courteous' has already appeared. The story itself is promised as 'courteous'; Nicolette is 'courteous'; and the ladies who are not to go to heaven are 'courteous.' Aucassins is in the full tide of courtesy, and evidently a professional, or he never would have claimed a place for harpers and jongleurs with kings and chevaliers in the next world. The poets of 'courteous love' showed as little interest in religion as the poets of the eleventh century had shown for it in their poems of war. Aucassins resembled Christian of Troyes in this, and both of them resembled Thibaut, while William of Lorris went beyond them all. The literature of the 'siècle' was always unreligious, from the 'Chanson de Roland' to the 'Tragedy of Hamlet'; to be 'papelard' was unworthy of a chevalier; the true knight of courtesy made nothing of defying the torments of hell, as he defied the lance of a rival, the frowns of society, the threats of parents or the terrors of magic; the perfect, gentle, courteous lover thought of nothing but his love. Whether the object of his love were Nicolette of

Beaucaire or Blanche of Castile, Mary of Champagne or Mary of Chartres, was a detail which did not affect the devotion of his worship.

So Nicolette, shut up in a vaulted chamber, leaned out at the marble window and sang, while Aucassins, when his father promised that he should have a kiss from Nicolette, went out to make fabulous slaughter of the enemy; and when his father broke the promise, shut himself up in his chamber, and also sang; and the action went on by scenes and interludes, until, one night, Nicolette let herself down from the window, by the help of sheets and towels, into the garden, and, with a natural dislike of wetting her skirts which has delighted every hearer or reader from that day to this, 'prist se vesture a l'une main devant et a l'autre deriere si s'escorça por le rousee qu'ele vit grande sor l'erbe si s'en ala aval le gardin'; she raised her skirts with one hand in front and the other behind, for the dew which she saw heavy on the grass, and went off down the garden, to the tower where Aucassins was locked up, and sang to him through a crack in the masonry, and gave him a lock of her hair, and they talked till the friendly night-watch came by and warned her by a sweetly-sung chant, that she had better escape. So she bade farewell to Aucassins, and went on to a breach in the city wall, and she looked through it down into the fosse which was very deep and very steep. So she sang to herself —

Peres rois de maeste	Father, King of Majesty!
Or ne sai quel part aler.	Now I know not where to flee.
Se je vois u gaut rame	If I seek the forest free,
Ja me mengeront li le	Then the lions will eat me,
Li lions et li sengler	Wolves and wild boars terribly,
Dont il i a a plente.	Of which plenty there there be.

The lions were a touch of poetic licence, even for Beaucaire, but the wolves and wild boars were real enough; yet Nicolette feared even them less than she feared the Count, so she slid down what her audience well knew to be a most dangerous and difficult descent, and reached the bottom with many wounds in her hands and feet, 'et li san en sali bien en xii lius'; so that blood was drawn in a dozen places; and then she climbed up

the other side, and went off bravely into the depths of the fores an uncanny thing to do by night, as you can still see.

Then followed a pastoral, which might be taken from th works of another poet of the same period, whose acquaintan no one can neglect to make — Adam de la Halle, a Picard, Arras. Adam lived, it is true, fifty years later than the da imagined for Aucassins, but his shepherds and shepherdess are not so much like, as identical with, those of the Souther poet, and all have so singular an air of life that the convention courteous knight fades out beside them. The poet, whethe bourgeois, professional, noble, or clerical, never much love the peasant, and the peasant never much loved him, or any on else. The peasant was a class by himself, and his trait, as a clas was suspicion of everybody and all things, whether materia social, or divine. Naturally he detested his lord, whethe temporal or spiritual, because the seigneur and the priest too his earnings, but he was never servile, though a serf; he was fa from civil; he was commonly gross. He was cruel, but not mor so than his betters; and his morals were no worse. The objec of oppression on all sides — the invariable victim, whoeve else might escape — the French peasant, as a class, held his ow — and more. In fact, he succeeded in plundering Church Crown, nobility, and bourgeoisie, and was the only class i French history that rose steadily in power and well-being, fro the time of the crusades to the present day, whatever his oc casional suffering may have been; and, in the thirteenth century he was suffering. When Nicolette, on the morning after he escape, came upon a group of peasants in the forest, tending th Count's cattle, she had reason to be afraid of them, but instea they were afraid of her. They thought at first that she was fairy. When they guessed the riddle, they kept the secret though they risked punishment and lost the chance of reward b protecting her. Worse than this, they agreed, for a small present to give a message to Aucassins if he should ride that way.

Aucassins was not very bright, but when he got out of prison after Nicolette's escape, he did ride out, at his friends' sugges tion, and tried to learn what had become of her. Passing

hrough the woods he came upon the same group of shepherds nd shepherdesses:

> Esmeres et Martinet,
> Fruelins et Johannes,
> Robecons et Aubries —

who might have been living in the Forest of Arden, so like were they to the clowns of Shakespeare. They were singing of Nicolette and her present, and the cakes and knives and flute they would buy with it. Aucassins jumped to the bait they offered him; and they instantly began to play him as though he were a trout:

Bel enfant, dix vos i ait!'

'Dix vos benie!' fait cil qui fu plus enparles des autres.

Bel enfant,' fait il, 'redites le cançon que vos disiez ore!'

Nous n'i dirons,' fait cil qui plus fu enparles des autres. 'Dehait ore qui por vos i cantera, biax sire!'

Bel enfant!' fait Aucassins, 'enne me connissies vos?'

Oil! nos savions bien que vos estes Aucassins, nos damoisiax, mais nos ne somes mie a vos, ains somes au conte.'

Bel enfant, si feres, je vos en pri!'

Os, por le cuer be!' fait cil. 'Por quoi canteroie je por vos, s'il ne me seoit! Quant il n'a si rice home en cest pais sans le cors le conte Garin s'il trovait mes bues ne mes vaces ne mes brebis en ses pres n'en sen forment qu'il fust mie tant hardis por les es a crever qu'il les en ossast cacier. Et por quoi canteroie je por vos s'il ne me seoit?'

Se dix vos ait, bel enfant, si feres! et tenes x sous que j'ai ci en une borse!'

Sire les deniers prenderons nos, mais je ne vos canterai mie, car j'en ai jure. Mais je le vos conterai se vos voles.'

De par diu!' faits Aucassins. 'Encore aim je mix conter que nient.'

'God bless you, fair child!' said Aucassins.

'God be with you!' replied the one who talked best.

'Fair child!' said he, 'repeat the song you were just singing.'

'We won't!' replied he who talked best among them. 'Bad luck to him who shall sing for you, good sir!'

'Fair child,' said Aucassins, 'do you know me?'

'Yes! we know very well that you are Aucassins, our young lord; but we are none of yours; we belong to the Count.'

'Fair child, indeed you'll do it, I pray you!'

'Listen, for love of God!' said he. 'Why should I sing for you if it does not suit me? when there is no man so powerful in this country, except Count Garin, if he found my oxen or my cows or my sheep in his pasture or his close, would not rather risk losing his eyes than dare to turn them out! and why should I sing for you, if it does not suit me!'

'So God help you, good child, indeed you will do it! and take these ten sous that I have here in my purse.'

'Sire, the money we will take, but I'll not sing to you, for I've sworn it. But I will tell it you, if you like.'

'For God's sake!' said Aucassins; 'better telling than nothing!'

Ten sous was no small gift! twenty sous was the value of strong ox. The poet put a high money-value on the force c love, but he set a higher value on it in courtesy. These boor were openly insolent to their young lord, trying to extort mone from him, and threatening him with telling his father; but the were in their right, and Nicolette was in their power. At hear they meant Aucassins well, but they were rude and grasping and the poet used them in order to show how love made the tru lover courteous even to clowns. Aucassins' gentle courtesy i brought out by the boors' greed, as the colours in the window were brought out and given their value by a bit of blue or green The poet, having got his little touch of colour rightly placed, let the peasants go. 'Cil qui fu plus enparles des autres,' having been given his way and his money, told Aucassins what he knew of Nicolette and her message; so Aucassins put spurs to his horse and cantered into the forest, singing:

Se diu plaist le pere fort	So please God, great and strong,
Je vos reverai encore	I will find you now ere long,
Suer, douce a-mie!	Sister, sweet friend!

But the peasant had singular attraction for the poet. Whether the character gave him a chance for some clever mimicry, which was one of his strong points as a story-teller: or whether he wanted to treat his subjects, like the legendary windows, in pairs; or whether he felt that the forest-scene specially amused his audience, he immediately introduced a peasant of another class, much more strongly coloured, or deeply shadowed. Every one in the audience was — and, for that matter, still would be — familiar with the great forests, the home of half the fairy and nursery tales of Europe, still wild enough and extensive enough to hide in, although they have now comparatively few lions, and not many wolves or wild boars or serpents such as Nicolette feared. Every one saw, without an effort, the young damoiseau riding out with his hound or hawk, looking for game; the lanes under the trees, through the wood, or the thick underbrush before lanes were made; the herdsmen watching their herds, and keeping a sharp lookout for wolves; the peasant seeking lost cattle; the black kiln-men burning charcoal; and in the depths

f the rocks or swamps or thickets — the outlaw. Even now, orests like Rambouillet, or Fontainebleau or Compiègne are normous and wild; one can see Aucassins breaking his way hrough thorns and branches in search of Nicolette, tearing is clothes and wounding himself 'en xl lius u en xxx,' until vening approached, and he began to weep for disappointment:

Il esgarda devant lui enmi la voie si it un vallet tel que je vos dirai. Grans toit et mervellex et lais et hidex. Il voit une grande hure plus noire u'une carbouclee, et avoit plus de lanne paume entre ii ex, et avoit unes randes joes et un grandisme nez plat, une grans narines lees et unes grosses vres plus rouges d'unes carbounees, uns grans dens gaunes et lais et toit caucies d'uns housiax et d'uns llers de buef fretes de tille dusque eseure le genol et estoit afules d'une ape a ii envers si estoit apoïies sor une rande maçue. Aucassins s'enbati sor i s'eut grand paor quant il le sorvit.

'Baix frere, dix ti ait!'

'Dix vos benie!' fait cil.

'Se dix t'ait, que fais tu ilec?'

'A vos que monte?' fait cil.

'Nient!' fait Aucassins; 'je nel vos emant se por bien non.'

'Mais pour quoi ploures vos?' fait cil, t faites si fait doel? Certes se j'estoie si rices hom que vos estes, tos li ons ne me feroit mie plorer.'

'Ba! me conissies vos!' fait Aucassins.

'Oie! je sai bien que vos estes Aucasns li fix le conte, et se vos me dites por uoi vos plores je vos dirai que je fac ici.'

As he looked before him along the way he saw a man such as I will tell you. Tall he was, and menacing, and ugly, and hideous. He had a great mane blacker than charcoal and had more than a full palm-width between his two eyes, and had big cheeks, and a huge flat nose and great broad nostrils, and thick lips redder than raw beef, and large ugly yellow teeth, and was shod with hose and leggings of raw hide laced with bark cord to above the knee, and was muffled in a cloak without lining, and was leaning on a great club. Aucassins came upon him suddenly, and had great fear when he saw him.

'Fair brother, good day!' said he.

'God bless you!' said the other.

'As God help you, what do you here?'

'What is that to you?' said the other.

'Nothing!' said Aucassins; 'I ask only from good-will.'

'But why are you crying!' said the other, 'and mourning so loud? Sure, if I were as great a man as you are, nothing on earth would make me cry.'

'Bah! you know me?' said Aucassins.

'Yes, I know very well that you are Aucassins, the count's son: and if you will tell me what you are crying for, I will tell you what I am doing here.'

Aucassins seemed to think this an equal bargain. All danoiseaux were not as courteous as Aucassins, nor all 'varlets' s rude as his peasants; we shall see how the young gentlemen f Picardy treated the peasantry for no offence at all; but Aucasns carried a softer, Southern temper in a happier climate, and, ith his invariable gentle courtesy, took no offence at the

familiarity with which the ploughman treated him. Yet h dared not tell the truth, so he invented, on the spur of th moment, an excuse; — he has lost, he said, a beautiful whit hound. The peasant hooted —

'Os!' fait cil; 'por le cuer que cil sires eut en sen ventre! que vos plorastes por un cien puant! Mal dehait ait qui ja mais vos prisera quant il n'a si rice home en ceste tere se vos peres l'en mandoit x u xv u xx qu'il ne les envoyast trop volontiers et s'en esteroit trop lies. Mais je dois plorer et dol faire?'

'Et tu de quoi frere?'

'Sire, je le vos dirai! J'estoie liues a un rice vilain si caçoie se carue. iiii bues i avoit. Or a iii jors qu'il m'avint une grande malaventure que je perdi le mellor de mes bues Roget le mellor de me carue. Si le vois querant. Si ne mengai ne ne bue iii jors a passes. Si n'os aler a le vile c'on me metroit en prison que je ne l'ai de quoi saure. De tot l'avoir du monde n'ai je plus vaillant que vos vees sor le cors de mi. Une lasse mere avoie; si n'avoit plus vaillant que une keutisele; si li a on sacie de desous le dos; si gist a pur l'estrain; si m'en poise asses plus que demi. Car avoirs va et vient; se j'ai or perdu je gaaignerai une autre fois; si sorrai mon buef quant je porrai, ne ja por çou n'en plorerai. Et vos plorastes por un cien de longaigne! Mal dehait ait qui mais vos prisera!'

'Certes tu es de bon confort, biax frere! que benois sois tu! Et que valoit tes bues!'

'Sire, xx sous m'en demande on, je n'en puis mie abatre une seule maille.'

'Or, tien,' fait Aucassins, 'xx que j'ai ci en me borse; si sol ten buef!'

'Sire!' fait il, 'grans mercies! et dix vos laist trover ce que vox queres!'

'Listen!' said he; 'By the heart Go had in his body! that you should cry f a stinking dog! Bad luck to him wh ever prizes you! When there is no ma in this land so great, if your father sen to him for ten or fifteen or twenty, bu would fetch them very gladly, and b only too pleased. But I ought to cr and mourn.'

'And why you, brother?'

'Sir, I will tell you. I was hired ou to a rich farmer to drive his plough There were four oxen. Now three day ago I had a great misfortune, for I los the best of my oxen, Roget, the best o my team. I am looking to find him I've not eaten or drunk these three day past. I daren't go to the town, fo they would put me in prison, as I've nothing to pay with. In all the world I've not the worth of anything bu what you see on my body. I've a poo old mother who owned nothing but a feather mattress, and they've dragged it from under her back, so she lies o the bare straw; and she troubles m more than myself. For riches come and go; if I lose today, I gain tomorrow I will pay for my ox when I can, and will not cry for that. And you cry for a filthy dog! Bad luck to him who eve thinks well of you!'

'Truly, you counsel well, good brother! God bless you! And wha was your ox worth?'

'Sir, they ask me twenty sous for it I cannot beat them down a singl centime.'

'Here are twenty,' said Aucassins 'that I have in my purse! Pay for you ox!'

'Sir!' said he; 'many thanks! and God grant you find what you seek!'

The little episode was thrown in without rhyme or reason to
ne rapid emotion of the love-story, as though the jongleur were
nowing his own cleverness and humour, at the expense of his
ero, as jongleurs had a way of doing; but he took no such
berties with his heroine. While Aucassins tore through the
nickets on horseback, crying aloud, Nicolette had built herself
little hut in the depths of the forest:

Ele prist des flors de lis
Et de l'erbe du garris
Et de le foille autresi;
Une belle loge en fist,
Ainques tant gente ne vi.
Jure diu qui ne menti
Se par la vient Aucassins
Et il por l'amor de li
Ne si repose un petit
Ja ne sera ses amis
N'ele s'a-mie.

So she twined the lilies' flower,
Roofed with leafy branches o'er,
Made of it a lovely bower,
With the freshest grass for floor,
Such as never mortal saw.
By God's Verity, she swore,
Should Aucassins pass her door,
And not stop for love of her,
To repose a moment there,
He should be her love no more,
Nor she his dear!

So night came on, and Nicolette went to sleep, a little distance
way from her hut. Aucassins at last came by, and dismounted,
praining his shoulder in doing it. Then he crept into the little
ut, and lying on his back, looked up through the leaves to the
noon, and sang:

Estoilete, je te voi,
Que la lune trait a soi.
Nicolete est aveuc toi,
M'amiete o le blond poil.
Je quid que dix le veut avoir
Por la lumiere de soir
Que par li plus clere soit.
Vien, amie, je te proie!
Ou monter vauroie droit,
Que que fust du recaoir.
Que fuisse lassus o toi
Ja te baiseroi estroit.
Se j'estoie fix a roi
S'afferies vos bien a moi
Suer douce amie!

I can see you, little star,
That the moon draws through the air.
Nicolette is where you are,
My own love with the blonde hair.
I think God must want her near
To shine down upon us here
That the evening be more clear.
Come down, dearest, to my prayer,
Or I climb up where you are!
Though I fell, I would not care.
If I once were with you there
I would kiss you closely, dear!
If a monarch's son I were
You should all my kingdom share,
Sweet friend, sister!

How Nicolette heard him sing, and came to him and rubbed
is shoulder and dressed his wounds as though he were a child;

and how in the morning they rode away together, like Tenn son's 'Sleeping Beauty,'

> O'er the hills and far away
> Beyond their utmost purple rim,
> Beyond the night, beyond the day,

singing as they rode, the story goes on to tell or to sing verse —

Aucassins, li biax, li blons,	Aucassins, the brave, the fair,
Li gentix, li amorous,	Courteous knight and gentle lover,
Est issous del gaut parfont,	From the forest dense came forth;
Entre ses bras ses amors	In his arms his love he bore
Devant lui sor son arçon.	On his saddle-bow before;
Les ex li baise et le front,	Her eyes he kisses and her mouth,
Et le bouce et le menton.	And her forehead and her chin.
Elle l'a mis a raison.	She brings him back to earth again:
'Aucassins, biax amis dox,	'Aucassins, my love, my own,
'En quel tere en irons nous?'	'To what country shall we turn?'
'Douce amie, que sai jou?	'Dearest angel, what say you?
'Moi ne caut u nous aillons,	'I care nothing where we go,
'En forest u en destor	'In the forest or outside,
'Mais que je soie aveuc vous.'	'While you on my saddle ride.'
Passent les vaus et les mons,	So they pass by hill and dale,
Et les viles et les bors	And the city, and the town,
A la mer vinrent au jor,	Till they reach the morning pale,
Si descendent u sablon	And on sea-sands set them down,
Les le rivage.	Hard by the shore.

There we will leave them, for their further adventures hav not much to do with our matter. Like all the romans, or nearl all, 'Aucassins' is singularly pure and refined. Apparently th ladies of courteous love frowned on coarseness and allowed n licence. Their power must have been great, for the best roman are as free from grossness as the 'Chanson de Roland' itself, c the church glass, or the illuminations in the manuscripts; an as long as the power of the Church ruled good society, th decency continued. As far as women were concerned, the seem always to have been more clean than the men, excep when men painted them in colours which men liked bes Perhaps society was actually cleaner in the thirteenth centur than in the sixteenth, as Saint Louis was more decent tha Francis I, and as the bath was habitual in the twelfth centur

nd exceptional at the Renaissance. The rule held good for the ourgeoisie as well as among the dames cortoises. Christian nd Thibaut, 'Aucassins' and the 'Roman de la Rose,' may ave expressed only the tastes of highborn ladies, but other oems were avowedly bourgeois, and among the bourgeois oets none was better than Adam de la Halle. Adam wrote also or the court, or at least for Robert of Artois, Saint Louis's ephew, whom he followed to Naples in 1284, but his poetry was s little aristocratic as poetry could well be, and most of it was ynically — almost defiantly — middle-class, as though the eavers of Arras were his only audience, and recognized him nd the objects of his satire in every verse. The bitter personlities do not concern us, but, at Naples, to amuse Robert of rtois and his court, Adam composed the first of French comic peras, which had an immense success, and, as a pastoral poem, as it still. The Idyll of Arras was a singular contrast to the dyll of Beaucaire, but the social value was the same in both; obin and Marion were a pendant to Aucassins and Nicolette; obin was almost a burlesque on Aucassins, while Marion was Northern, energetic, intelligent, pastoral Nicolette.

'Li Gieus de Robin et de Marion' had little or no plot. Adam trung together, on a thread of dialogue and by a group of uitable figures, a number of the favourite songs of his time, llowed by the favourite games, and ending with a favourite ance, the 'tresca.' The songs, the games, and the dances do ot concern us, but the dialogue runs along prettily, with an air f Flemish realism, like a picture of Teniers, as unlike that of courtoisie' as Teniers was to Guido Reni. Underneath it all tone of satire made itself felt, good-natured enough, but irected wholly against the men.

The scene opens on Marion tending her sheep, and singing he pretty air: 'Robin m'aime, Robin ma'a,' after which enters chevalier or esquire, on horseback, and sings: 'Je me repairoie u tournoiement.' Then follows a dialogue between the chevlier and Marion, with no other object than to show off the harm of Marion against the masculine defects of the knight. eing, like most squires, somewhat slow of ideas in conversation

with young women, the gentleman began by asking for spo for his falcon. Has she seen any duck down by the river?

Mais veis tu par chi devant
Vers ceste riviere nul ane?

'Ane,' it seems, was the usual word for wild duck, the falcon prey, and Marion knew it as well as he, but she chose to mis understand him:

C'est une bete qui recane;
J'en vis ier iii sur che quemin,
Tous quarchies aler au moulin.
Est che chou que vous demandes?

'It is a beast that brays; I saw three yesterday on the road, al with loads going to the mill. Is that what you ask?' That i not what the squire has asked, and he is conscious that Mario knows it, but he tries again. If she has not seen a duck, perhap she has seen a heron:

Hairons, sire? par me foi, non!
Je n'en vi nesun puis quareme
Que j'en vi mengier chies dame Eme
Me taiien qui sont ches brebis.

'Heron, sir! by my faith, no! I've not seen one since Lent whe I saw some eaten at my grandmother's — Dame Emma wh owns these sheep.' 'Hairons,' it seems, meant also herring, an this wilful misunderstanding struck the chevalier as carryin jest too far:

Par foi! or suis j'ou esbaubis!
N'ainc mais je ne fui si gabes!

'On my word, I am silenced! never in my life was I so chaffed! Marion herself seems to think her joke a little too evident, fo she takes up the conversation in her turn, only to conclude tha she likes Robin better than she does the knight; he is gayer, an when he plays his musette he starts the whole village dancing At this, the squire makes a declaration of love with such energ as to spur his horse almost over her:

Aimi, sire! ostez vo cheval!
A poi que il ne m'a blechie.
Li Robin ne regiete mie
Quand je voie apres se karue.

Aimi!' is an exclamation of alarm, real or affected: 'Dear me, ir! take your horse away! he almost hurt me! Robin's horse ever rears when I go behind his plough!' Still the knight ersists, and though Marion still tells him to go away, she asks is name, which he says is Aubert, and so gives her the catch-ord for another song: 'Vos perdes vo paine, sire Aubert!' – which ends the scene with a duo.

The second scene begins with a duo of Marion and Robin, llowed by her giving a softened account of the chevalier's ehaviour, and then they lunch on bread and cheese and apples, nd more songs follow, till she sends him to get Baldwin and Valter and Peronette and the pipers, for a dance. In his ab-ence the chevalier returns and becomes very pressing in his ttentions, which gives her occasion to sing:

J'oi Robin flagoler
Au flagol d'argent.

When Robin enters, the knight picks a quarrel with him for not andling properly the falcon which he has caught in the hedge; nd Robin gets a severe beating. The scene ends by the horse-nan carrying off Marion by force; but he soon gets tired of arrying her against her will, and drops her, and disappears nce for all.

Certes voirement sui je beste
Quant a ceste beste m'areste.
Adieu, bergiere!

Bête the knight certainly was, and was meant to be, in order o give the necessary colour to Marion's charms. Chevaliers vere seldom intellectually brilliant in the mediaeval romans, and ven the 'Chansons de Geste' liked better to talk of their prowess han of their wit; but Adam de la Halle, who felt no great love or chevaliers, was not satisfied with ridiculing them in order o exalt Marion; his second act was devoted to exalting Marion t the expense of her own boors.

The first act was given up to song; the second, to games and lances. The games prove not to be wholly a success; Marion is ored by them, and wants to dance. The dialogue shows Marion trying constantly to control her clowns and make them

decent, as Blanche of Castile had been all her life trying to co trol her princes, and Mary of Chartres her kings. Robin a rustic counterpart to Thibaut. He is tamed by his love Marion, but he has just enough intelligence to think well himself, and to get himself into trouble without knowing how t get out of it. Marion loves him much as she would her chil she makes only a little fun of him; defends him from the other laughs at his jealousy; scolds him on occasion; flatters his dan ing; sends him on errands, to bring the pipers or drive away th wolf; and what is most to our purpose, uses him to make th other peasants decent. Walter and Baldwin and Hugh ar coarse, and their idea of wit is to shock the women or mak Robin jealous. Love makes gentlemen even of boors, whethe noble or villain, is the constant moral of mediaeval story, an love turns Robin into a champion of decency. When, at las Walter, playing the jongleur, begins to repeat a particularl coarse fabliau, or story in verse, Robin stops him short —

> Ho, Gautier, je n'en voeil plus! fi!
> Dites, seres vous tous jours teus!
> Vous estes un ors menestreus!

'Ho, Walter! I want no more of that: Shame! Say! are you goin to be always like that? You're a dirty beggar!' A fight seem inevitable, but Marion turns it into a dance, and the whol party, led by the pipers, with Robin and Marion at the head o the band, leave the stage in the dance which is said to be stil known in Italy as the 'tresca.'

Marion is in her way as charming as Nicolette, but we are les interested in her charm than in her power. Always the woma appears as the practical guide; the one who keeps her head even in love:

> Elle l'a mis a raison:
> 'Aucassins, biax amis dox,
> En quele tere en irons nous?'
> 'Douce amie, que sai jou?
> Moi ne caut ou nous aillons.'

The man never cared; he was always getting himself into cru sades, or feuds, or love, or debt, and depended on the woman to

get him out. The story was always of Charles VII and Jeanne d'Arc, or Agnes Sorel. The woman might be the good or the evil spirit, but she was always the stronger force. The twelfth and thirteenth centuries were a period when men were at their strongest; never before or since have they shown equal energy in such varied directions, or such intelligence in the direction of their energy; yet these marvels of history — these Plantagenets; these scholastic philosophers; these architects of Rheims and Amiens; these Innocents, and Robin Hoods and Marco Polos; these crusaders, who planted their enormous fortresses all over the Levant; these monks who made the wastes and barrens yield harvests; — all, without apparent exception, bowed down before the woman.

Explain it who will! We are not particularly interested in the explanation; it is the art we have chased through this French forest, like Aucassins hunting for Nicolette; and the art leads always to the woman. Poetry, like the architecture and the decoration, harks back to the same standard of taste. The specimens of Christian of Troyes, Thibaut, Tristan, Aucassins, and Adam de la Halle were mild admissions of feminine superiority compared with some that were more in vogue. If Thibaut painted his love-verses on the walls of his castle, he put there only what a more famous poet, who may have been his friend, set on the walls of his Château of Courteous Love, which, not being made with hands or with stone, but merely with verse, has not wholly perished. The 'Roman de la Rose' is the end of true mediaeval poetry and goes with the Sainte-Chapelle in architecture, and three hundred years of more or less graceful imitation or variation on the same themes which followed. Our age calls it false taste, and no doubt our age is right; — every age is right by its own standards as long as its standards amuse it; — but after all, the 'Roman de la Rose' charmed Chaucer — it may well charm you. The charm may not be that of Mont-Saint-Michel or of Roland; it has not the grand manner of the eleventh century, or the jewelled brilliancy of the Chartres lancets, or the splendid self-assertion of the roses: but even to this day it gives out a faint odour of Champagne and Touraine,

of Provence and Cyprus. One hears Thibaut and sees Quee Blanche.

Of course, this odour of true sanctity belongs only to th 'Roman' of William of Lorris, which dates from the death c Queen Blanche and of all good things, about 1250; a shor allegory of courteous love in forty-six hundred and sevent lines. To modern taste, an allegory of forty-six hundred an seventy lines seems to be not so short as it might be; but th fourteenth century found five thousand verses totally inadequat to the subject, and, about 1300, Jean de Meung added eighteer thousand lines, the favourite reading of society for one or tw hundred years, but beyond our horizon. The 'Roman' o William of Lorris was complete in itself; it had shape; beginning middle, and end; even a certain realism, action — almost life!

The Rose is any feminine ideal of beauty, intelligence, purity or grace — always culminating in the Virgin — but the scene i the Court of Love, and the action is avowedly in a dream, without time or place. The poet's tone is very pure; a little subdued at times sad; and the poem ends sadly; but all the figures tha were positively hideous were shut out of the court, and painted on the outside walls: Hatred; Felony; Covetousness; Envy; Poverty; Melancholy, and Old Age. Death did not appear. The passion for representing death in its horrors did not belong to the sunny atmosphere of the thirteenth century, and indeed jarred on French taste always, though the Church came to insist on it; but Old Age gave the poet a motive more artistic, foreshadowing Death, and quite sad enough to supply the necessary contrast. The poet who approached the walls of the château and saw, outside, all the unpleasant facts of life conspicuously posted up, as though to shut them out of doors, hastened to ask for entrance, and, when once admitted, found a court of ideals. Their names matter little. In the mind of William of Lorris, every one would people his ideal world with whatever ideal figures pleased him, and the only personal value of William's figures is that they represent what he thought the thirteenth-century ideals of a perfect society. Here is Courtesy, with a translation long thought to be by Chaucer:

Apres se tenoit Cortoisie
Qui moult estoit de tous prisie.
Si n'ere orgueilleuse ne fole.
C'est cele qui a la karole,
La soe merci, m'apela,
Ains que nule, quand je vins la.
Et ne fut ne nice n'umbrage,
Mais sages auques, sans outrage,
De biaus respons et de biaus dis,
Onc nus ne fu par li laidis,
Ne ne porta nului rancune,
Et fu clere comme la lune
Est avers les autres estoiles
Qui ne resemblent que chandoiles.
Faitisse estoit et avenant;
Je ne sai fame plus plaisant.
Ele ert en toutes cors bien digne
D'estre empereris ou roine.

And next that daunced Courtesye,
That preised was of lowe and hye,
For neither proude ne foole was she;
She for to daunce called me,
I pray God yeve hir right good grace,
When I come first into the place.
She was not nyce ne outrageous,
But wys and ware and vertuous;
Of faire speche and of faire answere;
Was never wight mysseid of her,
Ne she bar rancour to no wight.
Clere browne she was, and thereto bright

Of face, of body avenaunt.
I wot no lady so pleasaunt.
She were worthy forto bene
An empresse or crowned quene.

You can read for yourselves the characters, and can follow the simple action which owes its slight interest only to the constant effort of the dreamer to attain his ideal — the Rose — and owes its charm chiefly to the constant disappointment and final defeat. An undertone of sadness runs through it, felt already in the picture of Time which foreshadows the end of Love — the Rose — and her court, and with it the end of hope:

Li tens qui s'en va nuit et jor,
Sans repos prendre et sans sejor,
Et qui de nous se part et emble
Si celeement qu'il nous semble
Qu'il s'arreste ades en un point,
Et il ne s'i arreste point,
Ains ne fine de trespasser,
Que nus ne puet neis penser
Quex tens ce est qui est presens;
S'el demandes as clers lisans,
Ainçois que l'en l'eust pense
Seroit il ja trois tens passe;
Li tens qui ne puet sejourner,
Ains vait tous jors sans retorner,
Com l'iaue qui s'avale toute,
N'il n'en retourne arriere goute;
Li tens vers qui noient ne dure,
Ne fer ne chose tant soit dure,
Car il gaste tout et menjue;
Li tens qui tote chose mue,
Qui tout fait croistre et tout norist,
Et qui tout use et tout porrist.

The tyme that passeth nyght and daye,
And restelesse travayleth aye,
And steleth from us so prively,
That to us semeth so sykerly
That it in one poynt dwelleth never,
But gothe so fast, and passeth aye

That there nys man that thynke may
What tyme that now present is;
Asketh at these clerkes this,
For or men thynke it readily
Thre tymes ben ypassed by.
The tyme that may not sojourne
But goth, and may never returne,
As water that down renneth ay,
But never drope retourne may.
There may no thing as time endure,
Metall nor earthly creature:
For alle thing it frette and shall.
The tyme eke that chaungith all,
And all doth waxe and fostered be,
And alle thing distroieth he.

The note of sadness has begun, which the poets were to find s
much more to their taste than the note of gladness. From th
'Roman de la Rose' to the 'Ballade des Dames du Temps jadis
was a short step for the Middle-Age giant Time — a poor tw
hundred years. Then Villon woke up to ask what had becom
of the Roses:

Ou est la tres sage Heloïs	Where is the virtuous Héloïse,
Pour qui fut chastie puis moyne,	For whom suffered, then turned monk
Pierre Esbaillart a Saint Denis?	Pierre Abélard at Saint-Denis?
Pour son amour ot cest essoyne.	For his love he bore that pain.
. . . . .	. . . . .
Et Jehanne la bonne Lorraine	And Jeanne d'Arc, the good Lorraine
Qu' Englois brulerent a Rouan;	Whom the English burned at Rouen!
Ou sont elles, Vierge Souvraine?	Where are they, Virgin Queen?
Mais ou sont les neiges dantan?	But where are the snows of spring?

Between the death of William of Lorris and the advent o
John of Meung, a short half-century (1250–1300), the Woman
and the Rose became bankrupt. Satire took the place of wor-
ship. Man, with his usual monkey-like malice, took pleasure in
pulling down what he had built up. The Frenchman had made
what he called 'fausse route.' William of Lorris was first to see
it, and say it, with more sadness and less bitterness than Villon
showed; he won immortality by telling how he, and the thir-
teenth century in him, had lost himself in pursuing his Rose,
and how he had lost the Rose, too, waking up at last to the dull
memory of pain and sorrow and death, that 'tout porrist.' The
world had still a long march to make from the Rose of Queen
Blanche to the guillotine of Madame du Barry; but the 'Roman
de la Rose' made epoch. For the first time since Constantine
proclaimed the reign of Christ, a thousand years, or so, before
Philip the Fair dethroned Him, the deepest expression of social
feeling ended with the word: Despair.

XIII. Les Miracles de Notre Dame

Vergine Madre, figlia del tuo figlio,
Umile ed alta piu che creatura,
Termine fisso d'eterno consiglio,
Tu sei colei che l'umana natura
Nobilitasti si, che il suo fattore
Non disdegno di farsi sua fattura....
La tua benignita non pur soccorre
A chi dimanda, ma molte fiate
Liberamente al dimandar precorre.
In te misericordia, in te pietate,
In te magnificenza, in te s'aduna
Quantunque in creatura e di bontate.

Vergine bella, che di sol vestita,
Coronata di stelle, al sommo sole
Piacesti si che'n te sua luce ascose;
Amor mi spinge a dir di te parole;
Ma non so 'ncominciar senza tu aita,
E di colui ch'amando in te si pose.
Invoco lei che ben sempre rispose
Chi la chiamo con fede.
Vergine, s'a mercede
Miseria estrema dell' umane cose
Giammai ti volse, al mio prego t'inchina!
Soccorri alla mia guerra,
Bench'i sia terra, e tu del ciel regina!

DANTE composed one of these prayers; Petrarch the other. Chaucer translated Dante's prayer in the 'Second Nonnes Tale.' He who will may undertake to translate either; — not I! The Virgin, in whom is united whatever goodness is in created being, might possibly, in her infinite grace, forgive the sacrilege; but her power has limits, if not her grace; and the whole Trinity, with the Virgin to aid, had not the power to pardon him who should translate Dante and Petrarch. The prayers come in here, not merely for their beauty — although the Virgin knows how beautiful they are, whether man knows it or not; but chiefly to show the good faith, the depth of feeling, the intensity of conviction, with which society adored its ideal of human perfection.

The Virgin filled so enormous a space in the life and thought of the time that one stands now helpless before the mass of testimony to her direct action and constant presence in every moment and form of the illusion which men thought they

thought their existence. The twelfth and thirteenth centuries believed in the supernatural, and might almost be said to have contracted a miracle-habit, as morbid as any other form of artificial stimulant; they stood, like children, in an attitude of gaping wonder before the miracle of miracles which they felt in their own consciousness; but one can see in this emotion which is, after all, not exclusively infantile, no special reason why they should have so passionately flung themselves at the feet of the Woman rather than of the Man. Dante wrote in 1300, after the height of this emotion had passed; and Petrarch wrote half a century later still; but so slowly did the vision fade and so often did it revive, that, to this day, it remains the strongest symbol with which the Church can conjure.

Men were, after all, not wholly inconsequent; their attachment to Mary rested on an instinct of self-preservation. They knew their own peril. If there was to be a future life, Mary was their only hope. She alone represented Love. The Trinity were, or was, One, and could, by the nature of its essence, administer justice alone. Only childlike illusion could expect a personal favour from Christ. Turn the dogma as one would, to this it must logically come. Call the three Godheads by what names one liked, still they must remain One; must administer one justice; must admit only one law. In that law, no human weakness or error could exist; by its essence it was infinite, eternal, immutable. There was no crack and no cranny in the system through which human frailty could hope for escape. One was forced from corner to corner by a remorseless logic until one fell helpless at Mary's feet.

Without Mary, man had no hope except in atheism, and for atheism the world was not ready. Hemmed back on that side, men rushed like sheep to escape the butcher, and were driven to Mary; only too happy in finding protection and hope in a being who could understand the language they talked, and the excuses they had to offer. How passionately they worshipped Mary, the Cathedral of Chartres shows; and how this worship elevated the whole sex, all the literature and history of the time proclaim. If you need more proof, you can read more Petrarch;

but still one cannot realize how actual Mary was, to the men and women of the Middle Ages, and how she was present, as a matter of course, whether by way of miracle or as a habit of life, throughout their daily existence. The surest measure of her reality is the enormous money value they put on her assistance, and the art that was lavished on her gratification, but an almost equally certain sign is the casual allusion, the chance reference to her, which assumes her presence.

The earliest prose writer in the French language, who gave a picture of actual French life, was Joinville; and although he wrote after the death of Saint Louis and of William of Lorris and Adam de la Halle, in the full decadence of Philip the Fair, toward 1300, he had been a vassal of Thibaut and an intimate friend of Louis, and his memories went back to the France of Blanche's regency. Born in 1224, he must have seen in his youth the struggles of Thibaut against the enemies of Blanche, and in fact his memoirs contain Blanche's emphatic letter forbidding Thibaut to marry Yolande of Brittany. He knew Pierre de Dreux well, and when they were captured by the Saracens at Damietta, and thrown into the hold of a galley, 'I had my feet right on the face of the Count Pierre de Bretagne, whose feet, in turn, were by my face.' Joinville is almost twelfth-century in feeling. He was neither feminine nor sceptical, but simple. He showed no concern for poetry, but he put up a glass window to the Virgin. His religion belonged to the 'Chanson de Roland.' When Saint Louis, who had a pleasant sense of humour, put to him his favourite religious conundrums, Joinville affected not the least hypocrisy. 'Would you rather be a leper or commit a mortal sin?' asked the King. 'I would rather commit thirty mortal sins than be a leper,' answered Joinville. 'Do you wash the feet of the poor on Holy Thursday?' asked the King. 'God forbid!' replied Joinville, 'never will I wash the feet of such creatures!' Saint Louis mildly corrected his, or rather Thibaut's, seneschal, for these impieties, but he was no doubt used to them, for the soldier was never a churchman. If one asks Joinville what he thinks of the Virgin, he answers with the same frankness:

Ung jour moi estant devant le roi lui demanday congie d'all
en pelerinage a nostre Dame de Tourtouze [Tortosa in Syria] q
estoit ung veage tres fort requis. Et y avoit grant quantite c
pelerins par chacun jour pour ce que c'est le premier autel q
onques fust fait en l'onneur de la Mere de Dieu ainsi qu'on diso
lors. Et y faisoit nostre Dame de grans miracles a merveille
Entre lesquelz elle en fist ung d'un pouvre homme qui estoit ho
de son sens et demoniacle. Car il avoit le maling esperit dedai
le corps. Et advint par ung jour qu'il fut amene a icelui autel c
nostre Dame de Tourtouze. Et ainsi que ses amys qui l'avoier
la amene prioient a nostre Dame qu'elle lui voulsist recouvre
sante et guerison le diable que la pouvre creature avoit ou corp
respondit: 'Nostre Dame n'est pas ici; elle est en Egipte pou
aider au Roi de France et aux Chrestiens qui aujourdhui arriver
en la Terre sainte contre toute paiennie qui sont a cheval.' E
fut mis en escript le jour que le deable profera ces motz et fu
apporte au legat qui estoit avecques le roi de France; lequel m
dist depuis que a celui jour nous estion arrivez en la terre d'Egipte
Et suis bien certain que la bonne Dame Marie nous y eut bie
besoin.

This happened in Syria, after the total failure of the crusad
in Egypt. The ordinary man, even if he were a priest or
soldier, needed a miraculous faith to persuade him that Ou
Lady or any other divine power, had helped the crusades c
Saint Louis. Few of the usual fictions on which society reste
had ever required such defiance of facts; but, at least for a time
society held firm. The thirteenth century could not afford t
admit a doubt. Society had staked its existence, in this worl
and the next, on the reality and power of the Virgin; it ha
invested in her care nearly its whole capital, spiritual, artistic
intellectual, and economical, even to the bulk of its real an
personal estate; and her overthrow would have been the mo
appalling disaster the Western world had ever known. Withou
her, the Trinity itself could not stand; the Church must fal
the future world must dissolve. Not even the collapse of th
Roman Empire compared with a calamity so serious; for tha
had created, not destroyed, a faith.

If sceptics there were, they kept silence. Men disputed an

loubted about the Trinity, but about the Virgin the satirists Rutebeuf and Adam de la Halle wrote in the same spirit as Saint Bernard and Abélard, Adam de Saint-Victor and the pious monk Gaultier de Coincy. In the midst of violent disputes on other points of doctrine, the disputants united in devotion to Mary; and it was the single redeeming quality about them. The monarchs believed almost more implicitly than their subjects, and maintained the belief to the last. Doubtless the death of Queen Blanche marked the flood-tide at its height; but an authority so established as that of the Virgin, founded on instincts so deep, logic so rigorous, and, above all, on wealth so vast, declined slowly. Saint Louis died in 1270. Two hundred long and dismal years followed, in the midst of wars, decline of faith, dissolution of the old ties and interests, until, toward 1470, Louis XI succeeded in restoring some semblance of solidity to the State; and Louis XI divided his time and his money impartially between the Virgin of Chartres and the Virgin of Paris. In that respect, one can see no difference between him and Saint Louis, nor much between Philippe de Commines and Joinville. After Louis XI, another fantastic century passed, filled with the foulest horrors of history — religious wars; assassinations; Saint Bartholomews; sieges of Chartres; Huguenot leagues and sweeping destruction of religious monuments; Catholic leagues and fanatical reprisals on friends and foes — the actual dissolution of society in a mass of horrors compared with which even the Albigensian crusade was a local accident, all ending in the reign of the last Valois, Henry III, the weirdest, most fascinating, most repulsive, most pathetic and most pitiable of the whole picturesque series of French kings. If you look into the Journal of Pierre de l'Estoile, under date of January 26, 1582, you can read the entry:

> The King and the Queen [Louise de Lorraine], separately, and each accompanied by a good troop [of companions] went on foot from Paris to Chartres on a pilgrimage [voyage] to Notre-Dame-de-dessous-Terre [Our Lady of the Crypt], where a neuvaine was celebrated at the last mass at which the King and Queen assisted, and offered a silver-gilt statue of Notre Dame which

weighed a hundred marks [eight hundred ounces], with the obje
of having lineage which might succeed to the throne.

In the dead of winter, in robes of penitents, over the roughe
roads, on foot, the King and Queen, then seven years marrie
walked fifty miles to Chartres to supplicate the Virgin for chi
dren, and back again; and this they did year after year unt
Jacques Clément put an end to it with his dagger, in 1589, a
though the Virgin never chose to perform that miracle; bu
instead, allowed the House of Valois to die out and sat on h
throne in patience while the House of Bourbon was anointe
in their place. The only French King ever crowned in th
presence of Our Lady of Chartres was Henry IV — a heretic.

The year 1589, which was so decisive for Henry IV in Franc
marked in England the rise of Shakespeare as a sort of stag
monarch. While in France the Virgin still held such power tha
kings and queens asked her for favours, almost as instinctively a
they had done five hundred years before, in England Shak
speare set all human nature and all human history on the stag
with hardly an allusion to the Virgin's name, unless as an oat
The exceptions are worth noting as a matter of curious Shak
spearean criticism, for they are but two, and both are lines i
the 'First Part of Henry VI,' spoken by the Maid of Orleans:

Christ's mother helps me, else I were too weak!

Whether the 'First Part of Henry VI' was written by Shak
speare at all has been a doubt much discussed, and too deep f
tourists; but that this line was written by a Roman Catho
is the more likely because no such religious thought recurs in a
the rest of Shakespeare's works, dramatic or lyric, unless it
implied in Gaunt's allusion to 'the world's ransom, blesse
Mary's Son.' Thus, while three hundred years caused in En
land the disappearance of the great divinity on whom th
twelfth and thirteenth centuries had lavished all their hope
and during these three centuries every earthly throne had be
repeatedly shaken or shattered, the Church had been broken
halves, faith had been lost, and philosophies overthrown, th
Virgin still remained and remains the most intensely and th

ıost widely and the most personally felt, of all characters, ivine or human or imaginary, that ever existed among men. Iothing has even remotely taken her place. The only possible xception is the Buddha, Sakya Muni; but to the Western mind, figure like the Buddha stood much farther away than the 'irgin. That of the Christ even to Saint Bernard stood not so ear as that of his mother. Abélard expressed the fact in its ɔgical necessity even more strongly than Saint Bernard did:

Te requirunt vota fidelium,
Ad te corda suspirant omnium,
Tu spes nostra post Deum unica,
Advocata nobis es posita.
Ad judicis matrem confugiunt,
Qui judicis iram effugiunt,
Quae praecari pro eis cogitur,
Quae pro reis mater efficitur.

After the Trinity, you are our *only* hope'; *spes nostra unica;* 'you re placed there as our advocate; all of us who fear the wrath of he Judge, fly to the Judge's mother, who is logically compelled ɔ sue for us, and stands in the place of a mother to the guilty.' Abélard's logic was always ruthless, and the 'cogitur' is a tronger word than one would like to use now, with a priest in ıearing. We need not insist on it; but what one must insist on, ; the good faith of the whole people — kings, queens, princes f all sorts, philosophers, poets, soldiers, artists, as well as of the ommoners like ourselves, and the poor — for the good faith f the priests is not important to the understanding, since any lass which is sufficiently interested in believing will always ɔelieve. In order to feel Gothic architecture in the twelfth and hirteenth centuries, one must feel first and last, around and ıbove and beneath it, the good faith of the public, excepting ɔnly Jews and atheists, permeating every portion of it with the ɔnviction of an immediate alternative between heaven and ıell, with Mary as the *only* court in equity capable of overruling trict law.

The Virgin was a real person, whose tastes, wishes, instincts, ɔassions, were intimately known. Enough of the Virgin's iterature survives to show her character, and the course of her

daily life. We know more about her habits and thoughts tha about those of earthly queens. The 'Miracles de la Vierg make a large part, and not the poorest part, of the enormou literature of these two centuries, although the works of Albertu Magnus fill twenty-one folio volumes and those of Thoma Aquinas fill more, while the 'Chansons de Geste' and th 'Romans,' published or unpublished, are a special branch o literature with libraries to themselves. The collection of th Virgin's miracles put in verse by Gaultier de Coincy, monk prior, and poet, between 1214 and 1233 — the precise momen of the Chartres sculpture and glass — contains thirty thousan lines. Another great collection, narrating especially the miracle of the Virgin of Chartres, was made by a priest of Chartre Cathedral about 1240. Separate series, or single tales, hav appeared and are appearing constantly, but no general collec tion has ever been made, although the whole poetic literatur of the Virgin could be printed in the space of two or thre volumes of scholastic philosophy, and if the Church had care half as truly for the Virgin as it has for Thomas Aquinas, ever miracle might have been collected and published a score o times. The miracles themselves, indeed, are not very numerous In Gaultier de Coincy's collection they number only abou fifty. The Chartres collection relates chiefly to the horribl outbreak of what was called leprosy — the 'mal ardent' — which ravaged the north of France during the crusades, an added intensity to the feelings which brought all society to th Virgin's feet. Recent scholars are cataloguing and classifyin the miracles, as far as they survive, and have reduced the num ber within very moderate limits. As poetry Gaultier de Coincy' are the best.

Of Gaultier de Coincy and his poetry, Gaston Paris ha something to say which is worth quoting:

> It is the most curious, and often the most singular monumen of the infantile piety of the Middle Ages. Devotion to Mary i presented in it as a kind of infallible guarantee not only agains every sort of evil, but also against the most legitimate consequence of sin and even of crime. In these stories which have revolte

the most rational piety, as well as the philosophy of modern times, one must still admit a gentle and penetrating charm; a naïveté; a tenderness and a simplicity of heart, which touch, while they raise a smile. There, for instance, one sees a sick monk cured by the milk that Our Lady herself comes to invite him to draw from her 'douce mamelle'; a robber who is in the habit of recommending himself to the Virgin whenever he is going to 'embler,' is held up by her white hands for three days on the gibbet where he is hung, until the miracle becomes evident, and procures his pardon; an ignorant monk who knows only his Ave Maria, and is despised on that account, when dead reveals his sanctity by five roses which come out of his mouth in honour of the five letters of the name Maria; a nun who has quitted her convent to lead a life of sin, returns after long years, and finds that the Holy Virgin, to whom, in spite of all, she has never ceased to offer every day her prayer, has, during all this time, filled her place as sacristine, so that no one has perceived her absence.

Gaston Paris inclined to apologize to his 'bons bourgeois de ris' for reintroducing to them a character so doubtful as the irgin Mary, but, for our studies, the professor's elementary orality is eloquent. Clearly, M. Paris, the highest academic thority in the world, thought that the Virgin could hardly, his time, say the year 1900, be received into good society in e Latin Quarter. Our own English ancestors, known as uritans, held the same opinion, and excluded her from their ciety some four hundred years earlier, for the same reasons nich affected M. Gaston Paris. These reasons were just, and owed the respectability of the citizens who held them. In no ell-regulated community, under a proper system of police, uld the Virgin feel at home, and the same thing may be said most other saints as well as sinners. Her conduct was at times dignified, as M. Paris complained. She condescended to do mestic service, in order to help her friends, and she would use r needle, if she were in the mood, for the same object. The olden Legend' relates that:

A certain priest, who celebrated every day a mass in honour of the Holy Virgin, was brought up before Saint Thomas of Canterbury who suspended him from his charge, judging him to be

short-witted and irresponsible. Now Saint Thomas had occasi to mend his hair-cloth shirt, and while waiting for an opportun to do so, had hidden it under his bed; so the Virgin appeared to t priest and said to him: 'Go find the archbishop and tell him th she, for love of whom you celebrated masses, has herself mend his shirt for him which is under his bed; and tell him that s sends you to him that he may take off the interdict he has impos on you.' And Saint Thomas found that his shirt had in fact be mended. He relieved the priest, begging him to keep the secr of his wearing a hair-shirt.

Mary did some exceedingly unconventional things, ar among them the darning Thomas A'Becket's hair-shirt, and th supporting a robber on the gibbet, were not the most singula yet they seem not to have shocked Queen Blanche or Sai Francis or Saint Thomas Aquinas so much as they shocke M. Gaston Paris and M. Prudhomme. You have still to vis the cathedral at Le Mans for the sake of its twelfth-centu glass, and there, in the lower panel of the beautiful, and ve early, window of Saint Protais, you will see the full-leng figure of a man, lying in bed, under a handsome blanke watching, with staring eyes, the Virgin, in a green tunic, wea ing her royal crown, who is striking him on the head wi a heavy hammer and with both hands. The miracle belon to local history, and is amusing only to show how little th Virgin cared for criticism of her manners or acts. She was abo criticism. She made manners. Her acts were laws. No or thought of criticizing, in the style of a normal school, the will such a queen; but one might treat her with a degree of familia ity, under great provocation, which would startle easier criti than the French. Here is an instance:

A widow had an only child whom she tenderly loved. C hearing that this son had been taken by the enemy, chained, ar put in prison, she burst into tears, and addressing herself to th Virgin, to whom she was especially devoted, she asked her wi obstinacy for the release of her son; but when she saw at last th her prayers remained unanswered, she went to the church whe there was a sculptured image of Mary, and there, before th image, she said: 'Holy Virgin, I have begged you to deliver m

son, and you have not been willing to help an unhappy mother! I've implored your patronage for my son, and you have refused it! Very good! just as my son has been taken away from me, so I am going to take away yours, and keep him as a hostage!' Saying this, she approached, took the statue child on the Virgin's breast, carried it home, wrapped it in spotless linen, and locked it up in a box, happy to have such a hostage for her son's return. Now, the following night, the Virgin appeared to the young man, opened his prison doors, and said: 'Tell your mother, my child, to return me my Son now that I have returned hers!' The young man came home to his mother and told her of his miraculous deliverance; and she, overjoyed, hastened to go with the little Jesus to the Virgin, saying to her: 'I thank you, heavenly lady, for restoring me my child, and in return I restore yours!'

For the exactness of this story in all its details, Bishop James Voragio could not have vouched, nor did it greatly matter. What he could vouch for was the relation of intimacy and confidence between his people and the Queen of Heaven. The fact, conspicuous above all other historical certainties about religion, that the Virgin was by essence illogical, unreasonable and feminine, is the only fact of any ultimate value worth studying, and starts a number of questions that history has known itself clearly afraid to touch. Protestant and Catholic differ little in that respect. No one has ventured to explain why the Virgin wielded exclusive power over poor and rich, sinners and saints, alike. Why were all the Protestant churches cold failures without her help? Why could not the Holy Ghost — the spirit of Love and Grace — equally answer their prayers? Why was the Son powerless? Why was Chartres Cathedral in the thirteenth century — like Lourdes today — the expression of what is in substance a separate religion? Why did the gentle and gracious Virgin Mother so exasperate the Pilgrim Father? Why was the Woman struck out of the Church and ignored in the State? These questions are not antiquarian or trifling in historical value; they tug at the very heart-strings of all that makes whatever order is in the cosmos. If a Unity exists, in which and toward which all energies centre, it must explain and include Duality, Diversity, Infinity — Sex!

Although certain to be contradicted by every pious churc
man, a heretic must insist on thinking that the Mater Doloro
was the logical Virgin of the Church, and that the Trini
would never have raised her from the foot of the Cross, had n
the Virgin of Majesty been imposed, by necessity and publ
unanimity, on a creed which was meant to be complete witho
her. The true feeling of the Church was best expressed by t
Virgin herself in one of her attested miracles: 'A clerk, trustir
more in the Mother than in the Son, never stopped repeatin
the angelic salutation for his only prayer. Once as he said agai
the "Ave Maria," the Lord appeared to him, and said to hin
"My Mother thanks you much for all the Salutations that yo
make her; but still you should not forget to salute me alsc
tamen et me salutare memento."' The Trinity feared absorp
tion in her, but was compelled to accept, and even to invite he
aid, because the Trinity was a court of strict law, and, as in th
old customary law, no process of equity could be introduce
except by direct appeal to a higher power. She was impose
unanimously by all classes, because what man wanted most i
the Middle Ages was not merely law or equity, but also an
particularly favour. Strict justice, either on earth or in heaver
was the last thing that society cared to face. All men wer
sinners, and had, at least, the merit of feeling that, if they go
their deserts, not one would escape worse than whipping. Th
instinct of individuality went down through all classes, fron
the count at the top, to the jugleors and menestreus at th
bottom. The individual rebelled against restraint; societ
wanted to do what it pleased; all disliked the laws which Churc
and State were trying to fasten on them. They longed fo
a power above law — or above the contorted mass of ignoranc
and absurdity bearing the name of law; but the power whic
they longed for was not human, for humanity they knew to b
corrupt and incompetent from the day of Adam's creation t
the day of the Last Judgment. They were all criminals; if not
they would have had no use for the Church and very little fo
the State; but they had at least the merit of their faults; the
knew what they were, and, like children, they yearned fo

protection, pardon, and love. This was what the Trinity, though omnipotent, could not give. Whatever the heretic or mystic might try to persuade himself, God could not be Love. God was Justice, Order, Unity, Perfection; He could not be human and imperfect, nor could the Son or the Holy Ghost be other than the Father. The Mother alone was human, imperfect, and could love; she alone was Favour, Duality, Diversity. Under any conceivable form of religion, this duality must find embodiment somewhere, and the Middle Ages logically insisted that, as it could not be in the Trinity, either separately or together, it must be in the Mother. If the Trinity was in its essence Unity, the Mother alone could represent whatever was not Unity; whatever was irregular, exceptional, outlawed; and this was the whole human race. The saints alone were safe, after they were sainted. Every one else was criminal, and men differed so little in degree of sin that, in Mary's eyes, all were subjects for her pity and help.

This general rule of favour, apart from law, or the reverse of law, was the mark of Mary's activity in human affairs. Take, for an example, an entire class of her miracles, applying to the discipline of the Church! A bishop ejected an ignorant and corrupt priest from his living, as all bishops constantly had to do. The priest had taken the precaution to make himself Mary's *man*; he had devoted himself to her service and her worship. Mary instantly interfered — just as Queen Eleanor or Queen Blanche would have done — most unreasonably, and never was a poor bishop more roughly scolded by an orthodox queen! 'Moult airieement,' very airily or angrily, she said to him (Bartsch, 1887, p. 363):

Ce saches tu certainement	Now know you this for sure and true,
Se tu li matinet *bien main*	Unless tomorrow this you do,
Ne rapeles mon chapelain	— And do it very early too —
A son servise et a s'enor,	Restore my chaplain to his due,
L'ame de toi a desenor	A much worse fate remains for you!
Ains trente jors departira	Within a month your soul shall go
Et es dolors d'infer ira.	To suffer in the flames below.

The story-teller — himself a priest and prior — caught the lofty trick of manner which belonged to the great ladies of the

court, and was inherited by them, even in England, down to th time of Queen Elizabeth, who treated her bishops also lik domestic servants; — 'matinet bien main!' To the public, a to us, the justice of the rebuke was nothing to the point; bu that a friend should exist on earth or in heaven, who dared t browbeat a bishop, caused the keenest personal delight. Th legends are clearer on this point than on any other. The peopl loved Mary because she trampled on conventions; not merel because she could do it, but because she liked to do wha shocked every well-regulated authority. Her pity had no limit

One of the Chartres miracles expresses the same motive ir language almost plainer still. A good-for-nothing clerk, vicious proud, vain, rude, and altogether worthless, but devoted to the Virgin, died, and with general approval his body was thrown into a ditch (Bartsch, 1887, p. 369):

> Mais cele ou sort tote pities
> Tote douceurs tote amisties
> Et qui les siens onques n'oublie
> *Son pecheor* n'oblia mie.

'*Her* sinner!' Mary would not have been a true queen unless she had protected her own. The whole morality of the Middle Ages stood in the obligation of every master to protect his dependent. The herdsmen of Count Garin of Beaucaire were the superiors of their damoiseau Aucassins, while they felt sure of the Count. Mary was the highest of all the feudal ladies, and was the example for all in loyalty to her own, when she had to humiliate her own Bishop of Chartres for the sake of a worthless brute. 'Do you suppose it doesn't annoy me,' she said, 'to see my friend buried in a common ditch? Take him out at once! I command! tell the clergy it is my order, and that I will never forgive them unless tomorrow morning without delay, they bury my friend in the best place in the cemetery!':

> Cuidies vos donc qu'il ne m'enuit
> Quant vos l'aves si adosse
> Que mis l'aves en un fosse?
> Metes l'en fors je le comant!
> Di le clergie que je li mant!
> Ne me puet mi repaier

Se le matin sans delayer
A grant heneur n'est mis amis
Ou plus beau leu de l'aitre mis.

Naturally, her order was instantly obeyed. In the feudal régime, disobedience to an order was treason — or even hesitation to obey — when the order was serious; very much as in a modern army, disobedience is not regarded as conceivable. Mary's wish was absolute law, on earth as in heaven. For her, other laws were not made. Intensely human, but always Queen, she upset, at her pleasure, the decisions of every court and the orders of every authority, human or divine; interfered directly in the ordeal; altered the processes of nature; abolished space; annihilated time. Like other queens, she had many of the failings and prejudices of her humanity. In spite of her own origin, she disliked Jews, and rarely neglected a chance to maltreat them. She was not in the least a prude. To her, sin was simply humanity, and she seemed often on the point of defending her arbitrary acts of mercy, by frankly telling the Trinity that if the Creator meant to punish man, He should not have made him. The people, who always in their hearts protested against bearing the responsibility for the Creator's arbitrary creations, delighted to see her upset the law, and reverse the rulings of the Trinity. They idolized her for being strong, physically and in will, so that she feared nothing, and was as helpful to the knight in the mêlée of battle as to the young mother in childbed. The only character in which they seemed slow to recognize Mary was that of bourgeoise. The bourgeoisie courted her favour at great expense, but she seemed to be at home on the farm, rather than in the shop. She had very rudimentary knowledge, indeed, of the principles of political economy as we understand them, and her views on the subject of money-lending or banking were so feminine as to rouse in that powerful class a vindictive enmity which helped to overthrow her throne. On the other hand, she showed a marked weakness for chivalry, and one of her prettiest and most twelfth-century miracles is that of the knight who heard mass while Mary took his place in the lists. It is much too charming to lose (Bartsch, 1895, p. 311):

Un chevalier courtois et sages,
Hardis et de grant vasselages,
Nus mieudres en chevalerie,
Moult amoit la vierge Marie.
Pour son barnage demener
Et son franc cors d'armes pener,
Aloit a son tournoiement
Garnis de son contentement.

Au dieu plaisir ainsi avint
Que quant le jour du tournoi vint
Il se hastoit de chevauchier,
Bien vousist estre en champ premier.
D'une eglise qui pres estoit
Oi les sains que l'on sonnoit

Pour la sainte messe chanter.
Le chevalier sans arrester
S'en est ale droit a l'eglise
Pour escouter le dieu servise.
L'en chantoit tantost hautement
Une messe devotement
De la sainte Vierge Marie;
Puis a on autre comencie.
Le chevalier vien l'escouta,

De bon cuer la dame pria,
Et quant la messe fut finee
La tierce fu recomenciee
Tantost en ce meisme lieu.
'Sire, pour la sainte char dieu!'
Ce li a dit son escuier,
'L'heure passe de tournoier,
Et vous que demourez ici?
Venez vous en, je vous en pri!
Volez vous devenir hermite
Ou papelart ou ypocrite?

Alons en a nostre mestier!'

A knight both courteous and wise
And brave and bold in enterprise.
No better knight was ever seen,
Greatly loved the Virgin Queen.
Once, to contest the tourney's prize
And keep his strength in exercise,
He rode out to the listed field
Armed at all points with lance and shield;
But it pleased God that when the day
Of tourney came, and on his way
He pressed his charger's speed apace
To reach, before his friends, the place,
He saw a church hard by the road
And heard the church-bells sounding loud
To celebrate the holy mass.
Without a thought the church to pass
The knight drew rein, and entered there
To seek the aid of God in prayer.

High and clear they chanted then
A solemn mass to Mary Queen;
Then afresh began again.
Lost in his prayers the good knight stayed;
With all his heart to Mary prayed;
And, when the second one was done,
Straightway the third mass was begun,
Right there upon the self-same place.
'Sire, for mercy of God's grace!'
Whispered his squire in his ear;
'The hour of tournament is near;
Why do you want to linger here?
Is it a hermit to become,
Or hypocrite, or priest of Rome?
Come on, at once! despatch your prayer!
Let us be off to our affair!'

The accent of truth still lingers in this remonstrance of the squire, who must, from all time, have lost his temper on finding his chevalier addicted to 'papelardie' when he should have been fighting; but the priest had the advantage of telling the story and pointing the moral. This advantage the priest neglected rarely, but in this case he used it with such refinement and so much literary skill that even the squire might have been patient.

With the invariable gentle courtesy of the true knight, the chevalier replied only by soft words:

'Amis!' ce dist li chevalier,
'Cil tournoie moult noblement
Qui le servise dieu entent.'

In one of Milton's sonnets is a famous line which is commonly classed among the noblest verses of the English language:

'They also serve, who only stand and wait.'

Fine as it is, with the simplicity of the grand style, like the 'Chanson de Roland' the verse of Milton does not quite destroy the charm of thirteenth-century diction:

'Friend!' said to him the chevalier,
'He tourneys very nobly too,
Who only hears God's service through!'

No doubt the verses lack the singular power of the eleventh century; it is not worth while to pretend that any verse written in the thirteenth century wholly holds its own against 'Roland':

'Sire cumpain! faites le vus de gred?
Ja est ço Rollanz ki tant vos soelt amer!'

The courtesy of Roland has the serious solidity of the Romanesque arch, and that of Lancelot and Aucassins has the grace of a legendary window; but one may love it, all the same; and one may even love the knight — papelard though he were — as he turned back to the altar and remained in prayer until the last mass was ended.

Then they mounted and rode on toward the field, and of course you foresee what had happened. In itself the story is old enough, but it is told with such skill that one never tires of it. As the chevalier and the squire approached the lists, they met the other knights returning, for the jousts were over; but, to the astonishment of the chevalier, he was greeted by all who passed him with shouts of applause for his marvellous triumph in the lists, where he had taken all the prizes and all the prisoners:

Les chevaliers ont encontrez,
Qui du tournois sont retournes,
Qui du tout en tout est feru.

His friends, returning from the fight,
On the way there met the knight,
For the jousts were wholly run,

S'en avoit tout le pris eu
Le chevalier qui reperoit
Des messes qu' oies avoit.
Les autres qui s'en reperoient
Le saluent et le conjoient
Et distrent bien que onques mes
Nul chevalier ne prist tel fes
D'armes com il ot fet ce jour;
A tousjours en avroit l'onnour.
Moult en i ot qui se rendoient
A lui prisonier, et disoient
'Nous somes vostre prisonier,
Ne nous ne pourrions nier,
Ne nous aiez par armes pris.'
Lors ne fu plus cil esbahis,
Car il a entendu tantost
Que cele fu pour lui en l'ost
Pour qui il fu en la chapelle.

And all the prizes had been won
By the knight who had not stirred
From the masses he had heard.
All the knights, as they came by,
Saluted him and gave him joy,
And frankly said that never yet
Had any knight performed such feat
Nor ever honour won so great
As he had done in arms that day;
While many of them stopped to say
That they all his prisoners were:
'In truth, your prisoners we are:
We cannot but admit it true:
Taken we were in arms by you!'
Then the truth dawned on him there
And all at once he saw the light,
That She, by whom he stood in praye
—The Virgin—stood by him in figh

The moral of the tale belongs to the best feudal times. Th knight at once recognized that he had become the liege-ma of the Queen, and henceforth must render his service entirel to her. So he called his 'barons,' or tenants, together, and afte telling them what had happened, took leave of them and th 'siècle':

'Moult est ciest tournoiement biaux
Ou ele a pour moi tournoie;
Mes trop l'avroit mal emploie
Se pour lui je ne tournoioie!
Fox seroie se retournoie
A la mondaine vanite.
A dieu promet en verite
Que james ne tournoierai
Fors devant le juge verai
Qui conoit le bon chevalier

Et selonc le fet set jutgier.'
Lors prent congie piteusement,
Et maint en plorent tenrement.
D'euls se part, en une abaie
Servi puis la vierge Marie.

'Glorious has the tourney been
Where for me has fought the Queen;
But a disgrace for me it were
If I tourneyed not for her.
Traitor to her should I be,
Returned to worldly vanity.
I promise truly, by God's grace,
Never again the lists to see,
Except before that Judge's face,
Who knows the true knight from th base,
And gives to each his final place.'
Then piteously he takes his leave
While in tears his barons grieve.
So he parts, and in an abbey
Serves henceforth the Virgin Mary.

Observe that in this case Mary exacted no service! Usuall the legends are told, as in this instance, by priests, though the were told in the same spirit by laymen, as you can see in th poems of Rutebeuf, and they would not have been told ver

differently by soldiers, if one may judge from Joinville; but commonly the Virgin herself prescribed the kind of service she wished. Especially to the young knight who had, of his own accord, chosen her for his liege, she showed herself as exacting as other great ladies showed themselves toward their Lancelots and Tristans. When she chose, she could even indulge in more or less coquetry, else she could never have appealed to the sympathies of the thirteenth-century knight-errant. One of her miracles told how she disciplined the young men who were too much in the habit of assuming her service in order to obtain selfish objects. A youthful chevalier, much given to tournaments and the other worldly diversions of the siècle, fell in love, after the rigorous obligation of his class, as you know from your Dulcinea del Toboso, with a lady who, as was also prescribed by the rules of courteous love, declined to listen to him. An abbot of his acquaintance, sympathizing with his distress, suggested to him the happy idea of appealing for help to the Queen of Heaven. He followed the advice, and for an entire year shut himself up, and prayed to Mary, in her chapel, that she would soften the heart of his beloved, and bring her to listen to his prayer. At the end of the twelvemonth, fixed as a natural and sufficient proof of his earnestness in devotion, he felt himself entitled to indulge again in innocent worldly pleasures, and on the first morning after his release, he started out on horseback for a day's hunting. Probably thousands of young knights and squires were always doing more or less the same thing, and it was quite usual that, as they rode through the fields or forests, they should happen on a solitary chapel or shrine, as this knight did. He stopped long enough to kneel in it and renew his prayer to the Queen:

La mere dieu qui maint chetif	God's Mother who to many a wretch
A retrait de chetivete	Has brought relief from wretchedness.
Par sa grant debonnairte	By her infinite goodness,
Par sa courtoise courtoisie	By her courteous courteousness,
Au las qui tant l'apele et prie	To her suppliant in distress
Ignelement s'est demonstree,	Came from heaven quickly down;
D'une coronne corronnee	On her head she bore the crown,
Plaine de pierres precieuses	Full of precious stones and gems
Si flamboianz si precieuses	Darting splendour, flashing flames,

Pour pou li euil ne li esluisent.
Si netement ainsi reluisent
Et resplendissent com la raie
Qui en este au matin raie.
Tant par a bel et cler le vis
Que buer fu mez, ce li est vis,
Qui s'i puest assez mirer.
'Cele qui te fait soupirer
Et en si grant erreur t'a mis,'
Fait nostre dame, 'biau douz amis,
Est ele plus bele que moi?'
Li chevaliers a tel effroi
De la clarte, ne sai que face;
Ses mains giete devant sa face;
Tel hide a et tel freeur
Chaoir se laisse de freeur;
Mais cele en qui pitie est toute
Li dist: 'Amis, or n'aies doute!
Je suis cele, n'en doute mie,
Qui te doi faire avoir t'amie.
Or prens garde que tu feras.
Cele que tu miex ameras
De nous ii auras a amie.'

Till the eye near lost its sight
In the keenness of the light,
As the summer morning's sun
Blinds the eyes it shines upon.
So beautiful and bright her face,
Only to look on her is grace.

'She who has caused you thus to sigh,
And has brought you to this end' —
Said Our Lady — 'Tell me, friend,
Is she handsomer than I?'
Scared by her brilliancy, the knight
Knows not what to do for fright;
He clasps his hands before his face,
And in his shame and his disgrace
Falls prostrate on the ground with fear
But she with pity ever near
Tells him: 'Friend, be not afraid!
Doubt not that I am she whose aid
Shall surely bring your love to you;
But take good care what you shall do!
She you shall love most faithfully
Of us two, shall your mistress be.'

One is at a loss to imagine what a young gentleman could do, in such a situation, except to obey, with the fewest words possible, the suggestion so gracefully intended. Queens' favours might be fatal gifts, but they were much more fatal to reject than to accept. Whatever might be the preferences of the knight, he had invited his own fate, and in consequence was fortunate to be allowed the option of dying and going to heaven or dying without going to heaven. Mary was not always so gentle with young men who deserted or neglected her for an earthly rival; — the offence which irritated her most, and occasionally caused her to use language which hardly bears translation into modern English. Without meaning to assert that the Queen of Heaven was jealous as Queen Blanche herself one must still admit that she was very severe on lovers who showed willingness to leave her service, and take service with any other lady. One of her admirers, educated for the priesthood but not yet in full orders, was obliged by reasons of family interest to quit his career in order to marry. An insult like this was more than Mary could endure, and she gave the young man a lesson he never forgot:

cement li prent a dire	With anger flashing in her eyes
a mere au roi de paradis:	Answers the Queen of Paradise:
Di moi, di moi, tu que jadis	'Tell me, tell me! you of old
'amoies tant de tout ton coeur.	Loved me once with love untold;
ourquoi m'as tu jete puer?	Why now throw me aside?
i moi, di moi, ou est donc cele	Tell me, tell me! where a bride
ui plus de moi bone est et bele? . . .	Kinder or fairer have you won? . . .
ourquoi, pourquoi, las durfeus,	Wherefore, wherefore, wretched one,
as engignez, las deceuz,	Deceived, betrayed, misled, undone,
e lais pour une lasse fame,	Leave me for a creature mean,
ui suis du ciel Royne et Dame?	Me, who am of Heaven the Queen?
me fais tu trop mauvais change	Can you make a worse exchange,
ui tu por une fame estrange	You that for a woman strange,
e laisses qui par amors t'amoie	Leave me who, with perfect love,
t ja ou ciel t'apareilloie	Waiting you in heaven above,
a mes chambres un riche lit	Had in my chamber richly dressed
or couchier t'ame a grand delit?	A bed of bliss your soul to rest?
rop par as faites grant merveilles	Terrible is your mistake!
autrement tost ne te conseilles	Unless you better council take,
u ciel serra tes lits deffais	In heaven your bed shall be unmade,
t en la flamme d'enfer faiz!'	And in the flames of hell be spread.'

A mistress who loved in this manner was not to be gainsaid. o earthly love had a chance of holding its own against this nfair combination of heaven and hell, and Mary was as unrupulous as any other great lady in abusing all her advantages n order to save *her* souls. Frenchmen never found fault with buses of power for what they thought a serious object. The ore tyrannical Mary was, the more her adorers adored, and ey wholly approved, both in love and in law, the rule that ny man who changed his allegiance without permission, did at his own peril. His life and property were forfeit. Mary owed him too much grace in giving him an option.

Even in anger Mary always remained a great lady, and in e ordinary relations of society her manners were exquisite, s they were, according to Joinville, in the court of Saint Louis, hen tempers were not overwrought. The very brutality of e brutal compelled the courteous to exaggerate courtesy, and me of the royal family were as coarse as the king was delicate n manners. In heaven the manners were perfect, and almost s stately as those of Roland and Oliver. On one occasion Saint eter found himself embarrassed by an affair which the public pinion of the Court of Heaven, although not by any means

puritanic, thought more objectionable — in fact, more franl discreditable — than an honest corrupt job ought to be; a even his influence, though certainly considerable, wholly fail to carry it through the law-court. The case, as reported Gaultier de Coincy, was this: A very worthless creature Saint Peter's — a monk of Cologne — who had led a scandalc life, and 'ne cremoit dieu, ordre ne roule,' died, and in d course of law was tried, convicted, and dragged off by t devils to undergo his term of punishment. Saint Peter could r desert his sinner, though much ashamed of him, and accor ingly made formal application to the Trinity for a pardon. T Trinity, somewhat severely, refused. Finding his own inter insufficient, Saint Peter tried to strengthen it by asking t archangels to help him; but the case was too much for the also, and they declined. The brother apostles were appeal to, with the same result; and finally even the saints, thou they had so obvious interest in keeping friendly relations w Peter, found public opinion too strong to defy. The case v desperate. The Trinity were — or was — emphatic, and what was rare in the Middle Ages — every member of feudal hierarchy sustained its decision. Nothing more could done in the regular way. Saint Peter was obliged to divest hi self of authority, and place himself and his dignity in the han of the Virgin. Accordingly he asked for an audience, and sta the case to Our Lady. With the utmost grace, she instan responded:

'Pierre, Pierre,' dit Nostre Dame,
'En moult grand poine et por ceste ame
De mon douz filz me fierai
Tant que pour toi l'en prierai.'
La Mere Dieu lors s'est levee,
Devant son filz s'en est alee
Et ses virges toutes apres.
De lui si tint Pierre pres,
Quar sanz doutance bien savoit
Que sa besoigne faite avoit
Puisque cele l'avoit en prise
Ou forme humaine avoit prise.

'Pierre, Pierre,' our Lady said,
'With all my heart I'll give you aid,
And to my gentle Son I'll sue
Until I beg that soul for you.'
God's Mother then arose straightw
And sought her Son without delay;
All her virgins followed her,
And Saint Peter kept him near,
For he knew his task was done
And his prize already won,
Since it was hers, in whom began
The life of God in form of Man.

Quant sa Mere vit li douz Sire

When our dear Lord, who deigne write

ui de son doit daigna escrire	With his own hand that in his sight
u'en honourant et pere et mere	Those in his kingdom held most dear
n contre lui a chere clere	Father and mother honoured here —
leva moult festivement	When He saw His Mother's face
si li dist moult doucement;	He rose and said with gentle grace:
ien veigniez vous, ma douce mere,'	'Well are you come, my heart's desire!'
omme douz filz, comme douz pere.	Like loving son, like gracious sire;
oucement l'a par la main prise	Took her hand gently in His own;
doucement lez lui assise;	Gently placed her on His throne,
rs li a dit: 'A douce chiere,	Wishing her graciously good cheer:
ue veus ma douce mere chiere,	'What brings my gentle Mother here,
es amies et mes sereurs?'	My sister, and my dearest friend?'

One can see Queen Blanche going to beg — or command - a favour of her son, King Louis, and the stately dignity of heir address, while Saint Peter and the virgins remain in the ntechamber; but, as for Saint Peter's lost soul, the request was mere form, and the doors of paradise were instantly opened to , after such brief formalities as should tend to preserve the chnical record of the law-court.

We tread here on very delicate ground. Gaultier de Coincy, eing a priest and a prior, could take liberties which we cannot r ought not to take. The doctrines of the Church are too rious and too ancient to be wilfully misstated, and the doc- ines of what is called Mariolatry were never even doctrines f the Church. Yet it is true that, in the hearts of Mary's rvants, the Church and its doctrines were at the mercy of Iary's will. Gaultier de Coincy claimed that Mary exasperated ie devils by exercising a wholly arbitrary and illegitimate ower. Gaultier not merely admitted, but frankly asserted, that is was the fact:

nt li deables: 'de cest plait,	'In this law-suit,' say the devils,
al por mal, assez miex nous plest	'Since it is a choice of evils,
ue nous aillons au jugement	We had best appeal on high
haut jugeur qui ne ment.	To the Judge Who does not lie.
au plait n'au jugement sa mere	What is law to any other,
e droit jugier est trop avere;	'Tis no use pleading with His Mother:
ais dieu nous juge si adroit,	But God judges us so true
ainement nous lest notre droit.	That He leaves us all our due.
mere juge en tel maniere	His Mother judges us so short
u'elle nous met touz jors arriere	That she throws us out of court
uant nous cuidons estre devant.	When we ought to win our cause.
. . . . .	. . . . .

En ciel et en terre est plus Dame
Par un petit que Diex ne soit.
Il l'aimme tant et tant la croit,
N'est riens qu'elle face ne die
Qu'il desveile ne contredie.
Quant qu'elle veut li fait acroire,
S'elle disoit la pie est noire
Et l'eue trouble est toute clere:
Si diroit il voir dit ma mere!'

In heaven and earth she makes n
laws
By far, than God Himself can do,
He loves her so, and trusts her so,
There's nothing she can do or say
That He'll refuse, or say her nay.
Whatever she may want is right,
Though she say that black is white,
And dirty water clear as snow:
My Mother says it, and it's so!'

If the Virgin took the feelings of the Trinity into conside
tion, or recognized its existence except as her Son, the case h
not been reported, or, at all events, has been somewhat ca
fully kept out of sight by the Virgin's poets. The devils we
emphatic in denouncing Mary for absorbing the whole Trini
In one sharply disputed case in regard to a villain, or labour
whose soul the Virgin claimed because he had learned t
'Ave Maria,' the devils became very angry, indeed, and pr
tested vehemently:

Li lait maufe, li rechinie
Adonc ont ris et eschinie.

C'en font il: 'Merveillans merveille!
Por ce vilain plate oreille

Aprent vo Dame a saluer,
Se nous vorro trestous tuer
Se regarder osons vers s'ame.
De tout le monde vieut estre Dame!
Ains nule dame ne fu tiez.
Il est avis qu'ele soit Diex
Ou qu'ele ait Diex en main bornie.

Nul besoigne n'est fournie,
Ne terrienne ne celestre,

Que toute Dame ne veille estre.
Il est avis que tout soit suen;
Dieu ne deable n'i ont rien.'

The ugly demons laugh outright
And grind their teeth with envi
spite;
Crying: 'Marvel marvellous!
Because that flat-eared ploughm
there
Learned to make your Dame a pray
She would like to kill us all
Just for looking toward his soul.
All the world she wants to rule!
No such Dame was ever seen!
She thinks that she is God, I ween,
Or holds Him in her hollow hand.
Not a judgment or command
Or an order can be given
Here on earth or there in heaven,
That she does not want control.
She thinks that she ordains the whole
And keeps it all for her own profit.
God nor Devil share not of it.'

As regards Mary of Chartres, these charges seem to have be
literally true, except so far as concerned the 'laid maufé' Pier
de Dreux. Gaultier de Coincy saw no impropriety in acceptin
as sufficiently exact, the allegations of the devils against t

Virgin's abuse of power. Down to the death of Queen Blanche, which is all that concerns us, the public saw no more impropriety in it than Gaultier did. The ugly, envious devils, notorious as students of the Latin Quarter, were perpetually making the same charges against Queen Blanche and her son, without disturbing her authority. No one could conceive that the Virgin held less influence in heaven than the queen mother on earth. Nevertheless there were points in the royal policy and conduct of Mary which thoughtful men even then hesitated to approve. The Church itself never liked to be dragged too far under feminine influence, although the moment it discarded feminine influence it lost nearly everything of any value to it or to the world, except its philosophy. Mary's tastes were too popular; some of the uglier devils said they were too low; many ladies and gentlemen of the 'siècle' thought them disreputable, though they dared not say so, or dared say so only by proxy, as in 'Aucassins.' As usual, one must go to the devils for the exact truth, and in spite of their outcry, the devils admitted that they had no reason to complain of Mary's administration:

Les beles dames de grant pris
Qui traynant vont ver et gris,
Roys, roynes, dus et contesses,
En enfer vienent a granz presses;
Mais ou ciel vont pres tout a fait
Tort et boçu et contrefait.
. . . . . .
Du ciel va toute la ringaille;
Le grain avons et diex la paille.'

'All the great dames and ladies fair
Who costly robes and ermine wear,
Kings, queens, and countesses and lords
Come down to hell in endless hordes;
While up to heaven go the lamed,
The dwarfs, the humpbacks, and the maimed;
To heaven goes the whole riff-raff;
We get the grain and God the chaff.'

True it was, although one should not say it jestingly, that the Virgin embarrassed the Trinity; and perhaps this was the reason, behind all the other excellent reasons, why men loved and adored her with a passion such as no other deity has ever inspired: and why we, although utter strangers to her, are not far from getting down on our knees and praying to her still. Mary concentrated in herself the whole rebellion of man against fate; the whole protest against divine law; the whole contempt for human law as its outcome; the whole unutterable fury of human nature beating itself against the walls of its prison-

house, and suddenly seized by a hope that in the Virgin m
had found a door of escape. She was above law; she to
feminine pleasure in turning hell into an ornament; she d
lighted in trampling on every social distinction in this wor
and the next. She knew that the universe was as unintelligib
to her, on any theory of morals, as it was to her worshippe
and she felt, like them, no sure conviction that it was any mo
intelligible to the Creator of it. To her, every suppliant w
a universe in itself, to be judged apart, on his own merits, l
his love for her — by no means on his orthodoxy, or his co
ventional standing in the Church, or according to his correc
ness in defining the nature of the Trinity. The convulsive ho
which Mary to this day maintains over human imagination -
as you can see at Lourdes — was due much less to her power
saving soul or body than to her sympathy with people wh
suffered under law — divine or human — justly or unjustly, b
accident or design, by decree of God or by guile of Devil. Sh
cared not a straw for conventional morality, and she had n
notion of letting her friends be punished, to the tenth or an
other generation, for the sins of their ancestors or the peccadillo
of Eve.

So Mary filled heaven with a sort of persons little to the tast
of any respectable middle-class society, which has troubl
enough in making this world decent and pay its bills, withou
having to continue the effort in another. Mary stood in
Church of her own, so independent that the Trinity might hav
perished without much affecting her position; but, on the othe
hand, the Trinity could look on and see her dethroned wit
almost a breath of relief. Aucassins and the devils of Gaultie
de Coincy foresaw her danger. Mary's treatment of respectabl
and law-abiding people who had no favours to ask, and wer
reasonably confident of getting to heaven by the regular judg
ment, without expense, rankled so deeply that three hundre
years later the Puritan reformers were not satisfied with abolish
ing her, but sought to abolish the woman altogether as th
cause of all evil in heaven and on earth. The Puritans aban
doned the New Testament and the Virgin in order to go bac

the beginning, and renew the quarrel with Eve. This is the hurch's affair, not ours, and the women are competent to ttle it with Church or State, without help from outside; but onest tourists are seriously interested in putting the feeling ack into the dead architecture where it belongs.

Mary was rarely harsh to any suppliant or servant, and she ok no special interest in humiliating the rich or the learned or e wise. For them, law was made; by them, law was administered; and with their doings Mary never arbitrarily terfered; but occasionally she could not resist the temptation intimate her opinion of the manner in which the Trinity lowed their — the regular — Church to be administered. e was a queen, and never for an instant forgot it, but she took tle thought about her divine rights, if she had any — and in ct Saint Bernard preferred her without them — while she was andalized at the greed of officials in her Son's Court. One ay a rich usurer and a very poor old woman happened to be ving in the same town. Gaultier de Coincy did not say, as an ccurate historian should, that he was present, nor did he ention names or dates, although it was one of his longest and st stories. Mary never loved bankers, and had no reason for king interest in this one, or for doing him injury; but it appened that the parish priest was summoned to both deathds at the same time, and neglected the old pauper in the hope securing a bequest for his church from the banker. This was e sort of fault that most annoyed Mary in the Church of the rinity, which, in her opinion, was not cared for as it should be, nd she felt it her duty to intimate as much.

Although the priest refused to come at the old woman's mmons, his young clerk, who seems to have acted as vicar ough not in orders, took pity on her, and went alone with the crament to her hut, which was the poorest of poor hovels even r that age:

Close de piex et de serciaus	Roof of hoops, and wall of logs,
Comme une viez souz a porciaus.	Like a wretched stye for hogs.

here the beggar lay, already insensible or at the last gasp, on arse thatch, on the ground, covered by an old hempen sack.

The picture represented the extremest poverty of the thirteen century; a hovel without even a feather bed or bedstead, Aucassins' ploughman described his mother's want; and the o woman alone, dying, as the clerk appeared at the opening:

Li clers qui fu moult bien apris
Le cors Nostre Seigneur a pris
A l'ostel a la povre fame
S'en vient touz seus mes n'i treuve ame.
Si grant clarte y a veue
Que grant peeur en a eue.
Ou povre lit a la vieillete
Qui couvers iert d'une nateite
Assises voit XII puceles
Si avenans et si tres beles
N'est nus tant penser i seust
Qui raconter le vout peust.
A coutee voist Nostre Dame
Sus le chevez la povre fame
Qui por la mort sue et travaille.
La Mere Dieu d'une tovaille
Qui blanche est plus que fleur de lis
La grant sueur d'entor le vis
A ses blanches mains li essuie.

The clerk, well in these duties taught,
The body of our Saviour brought
Where she lay upon her bed
Without a soul to give her aid.
But such brightness there he saw
As filled his mind with fear and awe.
Covered with a mat of straw
The woman lay; but round and near
A dozen maidens sat, so fair
No mortal man could dream such ligh
No mortal tongue describe the sight.
Then he saw that next the bed,
By the poor old woman's head,
As she gasped and strained for breath
In the agony of death,
Sat Our Lady — bending low —
While, with napkin white as snow,
She dried the death-sweat on the brov

The clerk, in terror, hesitated whether to turn and run away but Our Lady beckoned him to the bed, while all rose an kneeled devoutly to the sacrament. Then she said to th trembling clerk:

'Friend, be not afraid!
But seat yourself, to give us aid,
Beside these maidens, on the bed.'

And when the clerk had obeyed, she continued —

'Or tost, amis!' fait Nostre Dame,
'Confessies ceste bone fame
Et puis apres tout sans freeur
Recevra tost son sauveeur
Qui char et sanc vout en moi prendre.'

'Come quickly, friend!' Our Lady say
'This good old woman now confess
And afterwards without distress
She will at once receive her God
Who deigned in me take flesh and blood

After the sacrament came a touch of realism that recalls th simple death-scenes that Walter Scott described in his gran twelfth-century manner. The old woman lingered pitiably i her agony:

rs dit une des demoiseles	A maiden said to Saint Marie,
madame sainte Marie:	
ncore, dame, n'istra mie	'My lady, still it seems to me
com moi semble du cors l'ame.'	The soul will not the body fly.'
le fille,' fait Nostre Dame,	'Fair child!' Our Lady made reply,
raveiller lais un peu le cors,	'Still let awhile the body fight
nçois que l'ame en isse hors,	Before the soul shall leave it quite.
que puree soit et nete	So that it pure may be, and cleansed
nçois qu'en Paradis la mete.	When it to Paradise ascends.
est or mestier qui soions plus,	No longer need we here remain;
lon nous en ou ciel lassus,	We can go back to heaven again;
ıant tens en iert bien reviendrons	We will return before she dies,
paradis l'ame emmerrons.'	And take the soul to paradise.'

The rest of the story concerned the usurer, whose death-bed as of a different character, but Mary's interest in death-beds that kind was small. The fate of the usurer mattered the less ecause she knew too well how easily the banker, in good credit, uld arrange with the officials of the Trinity to open the doors paradise for him. The administration of heaven was very ke the administration of France; the Queen Mother saw many ings of which she could not wholly approve; but her nature as pity, not justice, and she shut her eyes to much that she uld not change. Her miracles, therefore, were for the most rt mere evidence of her pity for those who needed it most, d these were rarely the well-to-do people of the siècle, but ore commonly the helpless. Every saint performed miracles, d these are standard, not peculiar to any one intermediator; d every saint protected his own friends; but beyond these hibitions of power, which are more or less common to the hole hierarchy below the Trinity, Mary was the mother of ty and the only hope of despair. One might go on for a lume, studying the character of Mary and the changes that ne made in it, from the earliest Byzantine legends down to the ily recorded miracles at Lourdes; no character in history has d so long or varied a development, and none so sympathetic; ıt the greatest poets long ago plundered that mine of rich otives, and have stolen what was most dramatic for popular e. The Virgin's most famous early miracle seems to have en that of the monk Theophilus, which was what one might ll her salvation of Faust. Another Byzantine miracle was

an original version of Shylock. Shakespeare and his fellow dramatists plundered the Church legends as freely as thei masters plundered the Church treasuries, yet left a mass o dramatic material untouched. Let us pray the Virgin that i may remain untouched, for, although a good miracle was in it day worth much money — so much that the rival shrines stol each other's miracles without decency — one does not care t see one's Virgin put to money-making for Jew theatre-managers One's two hundred and fifty million arithmetical ancestor shrink.

For mere amusement, too, the miracle is worth reading of th little Jew child who ignorantly joined in the Christian com munion, and was thrown into a furnace by his father in conse quence; but when the furnace was opened, the Virgin appeare seated in the midst of the flames, with the little child unharme in her lap. A better is that called the 'Tombeor de Notre Dame,' only recently printed; told by some unknown poet o the thirteenth century, and told as well as any of Gaultier de Coincy's. Indeed the 'Tombeor de Notre Dame' has had more success in our time than it ever had in its own, as far as one knows, for it appeals to a quiet sense of humour that pleases modern French taste as much as it pleased the Virgin. One fears only to spoil it by translation, but if a translation be merely used as a glossary or footnote, it need not do fatal harm.

The story is that of a tumbler — tombeor, street-acrobat — who was disgusted with the world, as his class has had a reputation for becoming, and who was fortunate enough to obtain admission into the famous monastery of Clairvaux, where Saint Bernard may have formerly been blessed by the Virgin's presence. Ignorant at best, and especially ignorant of letters, music, and the offices of a religious society, he found himself unable to join in the services:

Car n'ot vescu fors de tumer	For he had learned no other thing
Et d'espringier et de baler.	Than to tumble, dance and spring:
Treper, saillir, ice savoit;	Leaping and vaulting, that he knew,
Ne d'autre rien il ne savoit;	But nothing better could he do.
Car ne savoit autre leçon	He could not say his prayers by rote;
Ne 'pater noster' ne chançon	Not 'Pater noster'; not a note;

Ne le 'credo' ne le salu
Ne rien qui fust a son salu.

Not 'Ave Mary,' nor the creed;
Nothing to help his soul in need.

Tormented by the sense of his uselessness to the society whose bread he ate without giving a return in service, and afraid of being expelled as a useless member, one day while the bells were calling to mass he hid in the crypt, and in despair began to soliloquize before the Virgin's altar, at the same spot, one hopes, where the Virgin had shown herself, or might have shown herself, in her infinite bounty, to Saint Bernard, a hundred years before:

'Hai,' fait il, 'con suis trais!
Or dira ja cascuns sa laisse
Et jo suis çi i bues en laisse
Qui ne fas ci fors que broster
Et viandes por nient gaster.
Si ne dirai ne ne ferai?
Par la mere deu, si ferai!
Ja n'en serai ore repris;
Jo ferai ce que j'ai apris;
Si servirai de men mestier
La mere deu en son mostier;
Li autre servent de canter
Et jo servirai de tumer.'
Sa cape oste, si se despoille,
Deles l'autel met sa despoille,
Mais por sa char que ne soit nue
Une cotele a retenue
Qui moult estait tenre et alise,
Petit vaut miex d'une chemise,
Si est en pur le cors remes.
Il s'est bien chains et acesmes,

Sa cote çaint et bien s'atorne,
Devers l'ymage se retorne
Mout humblement et si l'esgarde:
'Dame,' fait il, 'en vostre garde
Comant jo et mon cors et m'ame.
Douce reine, douce dame,
Ne despisies ce que jo sai
Car jo me voil metre a l'asai
De vos servir en bone foi
Se dex m'ait sans nul desroi.
Jo ne sai canter ne lire
Mais certes jo vos voil eslire
Tos mes biax gieus a esliçon.

'Ha!' said he, 'how I am ashamed!
To sing his part goes now each priest,
And I stand here, a tethered beast,
Who nothing do but browse and feed
And waste the food that others need.
Shall I say nothing, and stand still?
No! by God's mother, but I will!
She shall not think me here for naught;
At least I'll do what I've been taught!
At least I'll serve in my own way
God's mother in her church today.
The others serve to pray and sing;
I will serve to leap and spring.'
Then he strips him of his gown,
Lays it on the altar down;
But for himself he takes good care
Not to show his body bare,
But keeps a jacket, soft and thin,
Almost a shirt, to tumble in.
Clothed in this supple woof of maille
His strength and health and form showed well,
And when his belt is buckled fast,
Toward the Virgin turns at last:
Very humbly makes his prayer;
'Lady!' says he, 'to your care
I commit my soul and frame.
Gentle Virgin, gentle dame,
Do not despise what I shall do,
For I ask only to please you,
To serve you like an honest man,
So help me God, the best I can.
I cannot chant, nor can I read,
But I can show you here instead,
All my best tricks to make you laugh,

Or soie al fuer de taureçon
Qui trepe et saut devant sa mere.
Dame, qui n'estes mie amere
A cels qui vos servent a droit,
Quelsque jo soie, por vos soit!'

Lors li commence a faire saus
Bas et petits et grans et haus
Primes deseur et puis desos,
Puis se remet sor ses genols,
Devers l'ymage, et si l'encline:
'He!' fait il, 'tres douce reine
Par vo pitie, par vo francise,
Ne despisies pas mon servise!'

And so shall be as though a calf
Should leap and jump before its dam.
Lady, who never yet could blame
Those who serve you well and true,
All that I am, I am for you.'

Then he begins to jump about,
High and low, and in and out,
Straining hard with might and main;
Then, falling on his knees again,
Before the image bows his face:
'By your pity! by your grace!'
Says he, 'Ha! my gentle queen,
Do not despise my offering!'

In his earnestness he exerted himself until, at the end of his strength, he lay exhausted and unconscious on the altar steps. Pleased with his own exhibition, and satisfied that the Virgin was equally pleased, he continued these devotions every day, until at last his constant and singular absence from the regular services attracted the curiosity of a monk, who kept watch on him and reported his eccentric exercise to the Abbot.

The mediaeval monasteries seem to have been gently administered. Indeed, this has been made the chief reproach on them, and the excuse for robbing them for the benefit of a more energetic crown and nobility who tolerated no beggars or idleness but their own; at least, it is safe to say that few well-regulated and economically administered modern charities would have the patience of the Abbot of Clairvaux, who, instead of calling up the weak-minded tombeor and sending him back to the world to earn a living by his profession, went with his informant to the crypt, to see for himself what the strange report meant. We have seen at Chartres what a crypt may be, and how easily one might hide in its shadows while mass is said at the altars. The Abbot and his informant hid themselves behind a column in the shadow, and watched the whole performance to its end when the exhausted tumbler dropped unconscious and drenched with perspiration on the steps of the altar, with the words:

'Dame!' fait il, 'ne puis plus ore;
Mais voire je reviendrai encore.'

'Lady!' says he, 'no more I can,
But truly I'll come back again!'

You can imagine the dim crypt; the tumbler lying uncon-
ious beneath the image of the Virgin; the Abbot peering out
om the shadow of the column, and wondering what sort of
scipline he could inflict for this unforeseen infraction of rule;
nen suddenly, before he could decide what next to do, the
ult above the altar, of its own accord, opened:

bes esgarde sans atendre	The Abbot strains his eyes to see,
vit de la volte descendre	And, from the vaulting, suddenly,
e dame si gloriouse	A lady steps — so glorious —
s nus ne vit si preciouse	Beyond all thought so precious —
si ricement conreee,	Her robes so rich, so nobly worn —
nques tant bele ne fu nee.	So rare the gems the robes adorn —
vesteures sont bien chieres	As never yet so fair was born.
r et de precieuses pieres.	
ec li estoient li angle	Along with her the angels were,
l ciel amont, et li arcangle,	Archangels stood beside her there;
i entor le menestrel vienent,	Round about the tumbler group
le solacent et sostienent.	To give him solace, bring him hope;
ant entor lui sont arengie	And when round him in ranks they stood,
t tot son cuer asoagie.	His whole heart felt its strength renewed.
nt s'aprestent de lui servir	So they haste to give him aid
r ce qu'ils volrent deservir	Because their wills are only made
servise que fait la dame	To serve the service of their Queen,
i tant est precieuse geme.	Most precious gem the earth has seen.
la douce reine france	And the lady, gentle, true,
noit une touaille blance,	Holds in her hand a towel new;
n avente son menestrel	Fans him with her hand divine
ut doucement devant l'autel.	Where he lies before the shrine.
franc dame debonnaire	The kind lady, full of grace,
col, le cors, et le viaire	Fans his neck, his breast, his face!
avente por refroidier;	Fans him herself to give him air!
n s'entremet de lui aidier;	Labours, herself, to help him there!
dame bien s'i abandone;	The lady gives herself to it;
bons hom garde ne s'en done,	The poor man takes no heed of it;
r il ne voit, si ne set mie	For he knows not and cannot see
'il ait si bele compaignie.	That he has such fair company.

Beyond this we need not care to go. If you cannot feel the
lour and quality — the union of naïveté and art, the refine-
ent, the infinite delicacy and tenderness — of this little poem,
en nothing will matter much to you; and if you can feel it,
u can feel, without more assistance, the majesty of Chartres.

XIV. Abélard

Super cuncta, subter cuncta,
Extra cuncta, intra cuncta,
Intra cuncta nec inclusus,
Extra cuncta nec exclusus,
Super cuncta nec elatus,
Subter cuncta nec substratus,
Super totus, praesidendo,
Subter totus, sustinendo,
Extra totus, complectendo,
Intra totus est, implendo.

ACCORDING to Hildebert, Bishop of Le Mans and Archbishop of Tours, these verses describe God. Hildebert was the first poet of his time; no small merit, since he was contemporary with the 'Chanson de Roland' and the first crusade; he was also a strong man, since he was able, as Bishop of Le Mans, to gain great credit by maintaining himself against William the Norman and Fulk of Anjou; and finally he was a prelate of high authority. He lived between 1055 and 1133. Supposing his verses to have been written in middle life, toward the year 1100, they may be taken to represent the accepted doctrine of the Church at the time of the first crusade. They were little more than a versified form of the Latin of Saint Gregory the Great who wrote five hundred years before: 'Ipse manet intra omnia, ipse extra omnia, ipse supra omnia, ipse infra omnia; et superior est per potentiam et inferior per sustentationem; exterior per magnitudinem et interior per subtilitatem; sursum regens, deorsum continens, extra circumdans, interius penetrans; nec alia parte superior, alia

nferior, aut alia ex parte exterior atque ex alia manet interior, ed unus idemque totus ubique.' According to Saint Gregory, n the sixth century, God was 'one and the same and wholly verywhere'; 'immanent within everything, without everything, bove everything, below everything, *sursum regens, deorsum ontinens*'; while according to Archbishop Hildebert in the leventh century: 'God is over all things, under all things; outide all, inside all; within but not enclosed; without but not xcluded; above but not raised up; below but not depressed; vholly above, presiding; wholly beneath, sustaining; wholly vithout, embracing; wholly within, filling.' Finally, according o Benedict Spinoza, another five hundred years later still: God is a being, absolutely infinite; that is to say, a substance nade up of an infinity of attributes, each one of which expresses n eternal and infinite essence.'

Spinoza was the great pantheist, whose name is still a terror to he orthodox, and whose philosophy is — very properly — horror to the Church; and yet Spinoza never wrote a line hat, to the unguided student, sounds more Spinozist than the vords of Saint Gregory and Archbishop Hildebert. If God s everywhere; wholly; presiding, sustaining, embracing and lling, 'sursum regens, deorsum continens,' He is the only ossible energy, and leaves no place for human will to act. A force which is 'one and the same and wholly everywhere' is nore Spinozist than Spinoza, and is likely to be mistaken for rank pantheism by the large majority of religious minds who nust try to understand it without a theological course in a esuit college. In the year 1100 Jesuit colleges did not exist, nd even the great Dominican and Franciscan schools were far rom sight in the future; but the School of Notre Dame at Paris xisted, and taught the existence of God much as Archbishop Hildebert described it. The most successful lecturer was William f Champeaux, and to any one who ever heard of William at all, he name instantly calls up the figure of Abélard, in flesh and lood, as he sang to Héloïse the songs which he says resounded hrough Europe. The twelfth century, with all its sparkle, vould be dull without Abélard and Héloïse.

With infinite regret, Héloïse must be left out of the story because she was not a philosopher or a poet or an artist, but only a Frenchwoman to the last millimetre of her shadow. Even though one may suspect that her famous letters to Abélard are, for the most part, by no means above scepticism, she was, by French standards, worth at least a dozen Abélards, if only because she called Saint Bernard a false apostle. Unfortunately, French standards, by which she must be judged in our ignorance, take for granted that she philosophized only for the sake of Abélard, while Abélard taught philosophy to her not so much because he believed in philosophy or in her as because he believed in himself. To this day, Abélard remains a problem as perplexing as he must have been to Héloïse, and almost as fascinating. As the west portal of Chartres is the door through which one must of necessity enter the Gothic architecture of the thirteenth century, so Abélard is the portal of approach to the Gothic thought and philosophy within. Neither art nor thought has a modern equivalent; only Héloïse, like Isolde, unites the ages.

The first crusade seems, in perspective, to have filled the whole field of vision in France at the time; but, in fact, France seethed with other emotions, and while the crusaders set out to scale heaven by force at Jerusalem, the monks, who remained at home, undertook to scale heaven by prayer and by absorption of body and soul in God; the Cistercian Order was founded in 1098, and was joined in 1112 by young Bernard, born in 1090 at Fontaines-lès-Dijon, drawing with him or after him so many thousands of young men into the self-immolation of the monastery as carried dismay into the hearts of half the women of France. At the same time — that is, about 1098 or 1100 — Abélard came up to Paris from Brittany, with as much faith in logic as Bernard had in prayer or Godfrey of Bouillon in arms, and led an equal or even a greater number of combatants to the conquest of heaven by force of pure reason. None showed doubt. Hundreds of thousands of young men wandered from their provinces, mostly to Palestine, largely to cloisters, but also in great numbers to Paris and the schools, while few ever returned.

Abélard had the advantage of being well-born; not so highly scended as Albertus Magnus and Thomas Aquinas who were complete his work in the thirteenth century, but, like Bernard, gentleman born and bred. He was the eldest son of Bérenger, ur du Pallet, a château in Brittany, south of the Loire, on e edge of Poitou. His name was Pierre du Pallet, although, some unknown reason, he called himself Pierre Abailard, or eillard, or Esbaillart, or Beylard; for the spelling was never ed. He was born in 1079, and when, in 1096, the young men his rank were rushing off to the first crusade, Pierre, a boy of enteen, threw himself with equal zeal into the study of ence, and, giving up his inheritance or birthright, at last came Paris to seize a position in the schools. The year is supposed have been 1100.

The Paris of Abélard's time was astonishingly old; so old that rdly a stone of it can be now pointed out. Even the oldest of e buildings still standing in that quarter — Saint-Julien-le-uvre, Saint-Séverin, and the tower of the Lycée Henri IV — e more modern; only the old Roman Thermae, now part of e Musée de Cluny, within the walls, and the Abbey Tower of nt-Germain-des-Prés, outside, in the fields, were standing in e year 1100. Politically, Paris was a small provincial town fore the reign of Louis-le-Gros (1108–37), who cleared its es of its nearest enemies; but as a school, Paris was even then ily first. Students crowded into it by thousands, till the town aid to have contained more students than citizens. Modern ris seems to have begun as a university town before it had niversity. Students flocked to it from great distances, en-uraged and supported by charity, and stimulated by privi-es, until they took entire possession of what is still called the tin Quarter from the barbarous Latin they chattered; and own more riotous, drunken, and vicious than it became, in e course of time, hardly existed even in the Middle Ages. In oo, when enthusiasm was fresh and faith in science was strong, e great mass of students came there to study, and, having no gular university organization or buildings, they thronged the ister of Notre Dame — not our Notre Dame, which dates

only from 1163, but the old Romanesque cathedral which stoo
on the same spot — and there they listened, and retained wh
they could remember, for they were not encouraged to ta
notes even if they were rich enough to buy notebooks, whi
manuscripts were far beyond their means. One valuable rig
the students seem to have had — that of asking questions ar
even of disputing with the lecturer provided they followed th
correct form of dialectics. The lecturer himself was licenced b
the Bishop.

Five thousand students are supposed to have swarmed abo
the cloister of Notre Dame, across the Petit Pont, and up the h
of Sainte-Geneviève; three thousand are said to have paid fe
to Abélard in the days of his great vogue and they seem to ha
attached themselves to their favourite master as a champio
to be upheld against the world. Jealousies ran high, and neith
scholars nor masters shunned dispute. Indeed, the only scien
they taught or knew was the art of dispute — dialectic
Rhetoric, grammar, and dialectics were the regular branch
of science, and bold students, who were not afraid of dabblin
in forbidden fields, extended their studies to mathematics -
'exercitium nefarium,' according to Abélard, which he pr
fessed to know nothing about but which he studied neverthele
Abélard, whether pupil or master, never held his tongue if h
could help it, for his fortune depended on using it well; but h
never used it so well in dialectics or theology as he did, towa
the end of his life, in writing a bit of autobiography, so adm
rably told, so vivid, so vibrating with the curious intensity of h
generation, that it needed only to have been written in 'Romie
to be the chief monument of early French prose, as the weste
portal of Chartres is the chief monument of early Frenc
sculpture, and of about the same date. Unfortunately Abéla
was a noble scholar, who necessarily wrote and talked Lati
even with Héloïse, and, although the Latin was mediaeval, it
not much the better on that account, because, in spite of i
quaintness, the naïvetés of a young language — the egotism
jealousies, suspicions, boastings, and lamentations of a childli
time — take a false air of outworn Rome and Byzantiu
although, underneath, the spirit lives:

I arrived at last in Paris where for a long time dialectics had specially flourished under William of Champeaux, rightly reckoned the first of my masters in that branch of study. I stayed some time in his school, but, though well received at first, I soon got to be an annoyance to him because I persisted in refuting certain ideas of his, and because, not being afraid to enter into argument against him, I sometimes got the better. This boldness, too, roused the wrath of those fellow-students who were classed higher, because I was the youngest and the last comer. This was the beginning of my series of misfortunes which still last; my renown every day increasing, envy was kindled against me in every direction.

This picture of the boy of twenty, harassing the professor, y after day, in his own lecture-room before hundreds of older idents, paints Abélard to the life; but one may safely add few touches that heighten the effect; as that William of hampeaux himself was barely thirty, and that Abélard roughout his career, made use of every social and personal lvantage to gain a point, with little scruple either in manner in sophistry. One may easily imagine the scene. Teachers e always much the same. Pupils and students differ only in egrees of docility. In 1100, both classes began by accepting the undations of society, as they have to do still; only they then cepted laws of the Church and Aristotle, while now they cept laws of the legislature and of energy. In 1100, the stu-nts took for granted that, with the help of Aristotle and llogisms, they could build out the Church intellectually, as e architects, with the help of the pointed arch, were soon to large it architecturally. They never doubted the certainty their method. To them words had fixed values, like numbers, d syllogisms were hewn stones that needed only to be set in ace, in order to reach any height or support any weight. very sentence was made to take the form of a syllogism. One ust have been educated in a Jesuit or Dominican school in der to frame these syllogisms correctly, but merely by way of ustration one may timidly suggest how the phrases sounded their simplest form. For example, Plato or other equally good

authority defined substance as that which stands underneat phenomena; the most universal of universals, the ultimate, th highest in order of generalization. The ultimate essence c substance is indivisible; God is substance; God is indivisibl The divine substance is incapable of alteration or accident; a other substance is liable to alteration or accident; therefore, th divine substance differs from all other substance. A substanc is a universal; as for example, Humanity, or the Human, i a universal and indivisible; the Man Socrates, for instance, i not a universal, but an individual; therefore, the substanc Humanity, being indivisible, must exist entire and undivide in Socrates.

The form of logic most fascinating to youthful minds, as wel as to some minds that are only too acute, is the *reductio a absurdum;* the forcing an opponent into an absurd alternative o admission; and the syllogism lent itself happily to this use. Socrates abused the weapon and Abélard was the first French master of the art; but neither State nor Church likes to be reduced to an absurdity, and, on the whole, both Socrates and Abélard fared ill in the result. Even now, one had best be civil toward the idols of the forum. Abélard would find most of his old problems sensitive to his touch today. Time has settled few or none of the essential points of dispute. Science hesitates, more visibly than the Church ever did, to decide once for all whether unity or diversity is ultimate law; whether order or chaos is the governing rule of the universe, if universe there is; whether anything, except phenomena, exists. Even in matters more vital to society, one dares not speak too loud. Why, and for what, and to whom, is man a responsible agent? Every jury and judge, every lawyer and doctor, every legislator and clergyman has his own views, and the law constantly varies. Every nation may have a different system. One court may hang and another may acquit for the same crime, on the same day; and science only repeats what the Church said to Abélard, that where we know so little, we had better hold our tongues.

According to the latest authorities, the doctrine of universals which convulsed the schools of the twelfth century has never

ceived an adequate answer. What is a species? what is a genus r a family or an order? More or less convenient terms of lassification, about which the twelfth century cared very ttle, while it cared deeply about the essence of classes! Science as become too complex to affirm the existence of universal ruths, but it strives for nothing else, and disputes the problem, vithin its own limits, almost as earnestly as in the twelfth cenury, when the whole field of human and superhuman activity vas shut between these barriers of substance, universals, and articulars. Little has changed except the vocabulary and the nethod. The schools knew that their society hung for life on he demonstration that God, the ultimate universal, was a eality, out of which all other universal truths or realities sprang. Truth was a real thing, outside of human experience. The chools of Paris talked and thought of nothing else. John of alisbury, who attended Abélard's lectures about 1136, and ecame Bishop of Chartres in 1176, seems to have been more urprised than we need be at the intensity of the emotion. 'One ever gets away from this question,' he said. 'From whatever oint a discussion starts, it is always led back and attached to hat. It is the madness of Rufus about Naevia; "He thinks of othing else; talks of nothing else, and if Naevia did not exist, Rufus would be dumb."'

Abélard began it. After his first visit to Paris in 1100, he eems to have passed several years elsewhere, while Guillaume le Champeaux in 1108, retired from the school in the cloister f Notre Dame, and, taking orders, established a class in a chapel ear by, afterwards famous as the Abbaye-de-Saint-Victor. The Jardin des Plantes and the Gare d'Orléans now cover he ground where the Abbey stood, on the banks of the Seine utside the Latin Quarter, and not a trace is left of its site; but here William continued his course in dialectics, until suddenly Abélard reappeared among his scholars, and resumed his old ttacks. This time Abélard could hardly call himself a student. He was thirty years old, and long since had been himself a eacher; he had attended William's course on dialectics nearly en years before, and was past master in the art; he had nothing

to learn from William in theology, for neither William nor H was yet a theologist by profession. If Abélard went back t school, it was certainly not to learn; but indeed, he himse made little or no pretence of it, and told with childlike candou not only why he went, but also how brilliantly he succeeded i his object:

> I returned to study rhetoric in his school. Among other cor troversial battles, I succeeded, by the most irrefutable argumen in making him change, or rather ruin his doctrine of universal His doctrine consisted in affirming the perfect identity of th essence in every individual of the same species, so that accordin to him there was no difference in the essence but only in th infinite variety of accidents. He then came to amend his doctrin so as to affirm, not the identity any longer, but the absence c distinction — the want of difference — in the essence. And a this question of universals had always been one of the most impor tant questions of dialectics — so important that Porphyry, touch ing on it in his Preliminaries, did not dare to take the responsibilit of cutting the knot, but said, 'It is a very grave point,' — Cham peaux, who was obliged to modify his idea and then renounce it, saw his course fall into such discredit that they hardly let hin make his dialectical lectures, as though dialectics consisted entirely in the question of universals.

Why was this point so 'very grave'? Not because it was mere dialectics! The only part of the story that seems grave today is the part that Abélard left out; the part which Saint Bernard, thirty years later put in, on behalf of William. We should be more credulous than twelfth-century monks, if we believed, on Abélard's word in 1135, that in 1110 he had driven out of the schools the most accomplished dialectician of the age by an objection so familiar that no other dialectician was ever silenced by it — whatever may have been the case with theologians — and so obvious that it could not have troubled a scholar of fifteen. William stated a settled doctrine as old as Plato; Abélard interposed an objection as old as Aristotle. Probably Plato and Aristotle had received the question and answer from philosophers ten thousand years older than themselves. Cer-

ainly the whole of philosophy has always been involved in the lispute.

The subject is as amusing as a comedy; so amusing that ten ninutes may be well given to playing the scene between Wil-iam and Abélard, not as it happened, but in a form nearer our gnorance, with liberty to invent arguments for William, and nalogies — which are figures intended to serve as fatal weap-ons if they succeed, and as innocent toys if they fail — such as he never imagined; while Abélard can respond with his true rejoinder, fatal in a different sense. For the chief analogy, the notes of music would serve, or the colours of the solar spectrum, or an energy, such as gravity; — but the best is geometrical, because Euclid was as scholastic as William of Champeaux himself, and his axioms are even more familiar to the schoolboy of the twentieth, than to the schoolman of the twelfth century.

In these scholastic tournaments the two champions started from opposite points: — one, from the ultimate substance, God — the universal, the ideal, the type; — the other from the individual, Socrates, the concrete, the observed fact of experi-ence, the object of sensual perception. The first champion — William in this instance — assumed that the universal was a real thing; and for that reason he was called a realist. His op-ponent — Abélard — held that the universal was only nom-nally real; and on that account he was called a nominalist. Truth, virtue, humanity, exist as units and realities, said Wil-iam. Truth, replied Abélard, is only the sum of all possible facts that are true, as humanity is the sum of all actual human beings. The ideal bed is a form, made by God, said Plato. The ideal bed is a name, imagined by ourselves, said Aristotle. 'I start from the universe,' said William. 'I start from the atom,' said Abélard; and, once having started, they necessarily came nto collision at some point between the two.

William of Champeaux, lecturing on dialectics or logic, comes to the question of universals, which he says, are sub-stances. Starting from the highest substance, God, all being descends through created substances by stages, until it reaches the substance animality, from which it descends to the sub-

stance humanity: and humanity being, like other essences
substances, indivisible, passes wholly into each individual, b
coming Socrates, Plato, and Aristotle, much as the divine su
stance exists wholly and undivided in each member of th
Trinity.

Here Abélard interrupts. The divine substance, he say
operates by laws of its own, and cannot be used for comparison
In treating of human substance, one is bound by human limit
tions. If the whole of humanity is in Socrates, it is wholly ab
sorbed by Socrates, and cannot be at the same time in Plat
or elsewhere. Following his favourite *reductio ad absurdum*
Abélard turns the idea round, and infers from it that, sinc
Socrates carries all humanity in him, he carries Plato, too; an
both must be in the same place, though Socrates is at Athen
and Plato in Rome.

The objection is familiar to William, who replies by anothe
commonplace:

'Mr. Abélard, might I, without offence, ask you a simpl
matter? Can you give me Euclid's definition of a point?'

'If I remember right it is, "illud cujus nulla pars est"; tha
which has no parts.'

'Has it existence?'

'Only in our minds.'

'Not, then, in God?'

'All necessary truths exist first in God. If the point is a neces
sary truth, it exists first there.'

'Then might I ask you for Euclid's definition of the line?'

'The line is that which has only extension; "Linea vocatu
illa quae solam longitudinem habet."'

'Can you conceive an infinite straight line?'

'Only as a line which has no end, like the point extended.'

'Supposing we imagine a straight line, like opposite rays of the
sun, proceeding in opposite directions to infinity — is it real?'

'It has no reality except in the mind that conceives it.'

'Supposing we divide that line which has no reality into two
parts at its origin in the sun or star, shall we get two infinities?
— or shall we say, two halves of the infinite?'

'We conceive of each as partaking the quality of infinity.'

'Now, let us cut out the diameter of the sun; or rather — since this is what our successors in the school will do — let us take a line of our earth's longitude which is equally unreal, and measure a degree of this thing which does not exist, and then divide it into equal parts which we will use as a measure or metre. This metre, which is still nothing, as I understand you, is infinitely divisible into points? and the point itself is infinitely small? Therefore we have the finite partaking the nature of the infinite?'

'Undoubtedly!'

'One step more, Mr. Abélard, if I do not weary you! Let me take three of these metres which do not exist, and place them so that the ends of one shall touch the ends of the others. May I ask what is that figure?'

'I presume you mean it to be a triangle.'

'Precisely! and what sort of a triangle?'

'An equilateral triangle, the sides of which measure one metre each.'

'Now let me take three more of these metres which do not exist, and construct another triangle which does not exist; — are these two triangles or one triangle?'

'They are most certainly one — a single concept of the only possible equilateral triangle measuring one metre on each face.'

'You told us a moment ago that a universal could not exist wholly and exclusively in two individuals at once. Does not the universal by definition — *the* equilateral triangle measuring one metre on each face — does it not exist wholly, in its integrity of essence, in each of the two triangles we have conceived?'

'It does — as a conception.'

'I thank you! Now, although I fear wearying you, perhaps you will consent to let me add matter to mind. I have here on my desk an object not uncommon in nature, which I will ask you to describe.'

'It appears to be a crystal.'

'May I ask its shape?'

'I should call it a regular octahedron.'

'That is, two pyramids, set base to base? making eight plane surfaces, each a perfect equilateral triangle?'

'Concedo triangula (I grant the triangles).'

'Do you know, perchance, what is this material which seems to give substantial existence to these eight triangles?'

'I do not.'

'Nor I! nor does it matter, unless you conceive it to be the work of man?'

'I do not claim it as man's work.'

'Whose, then?'

'We believe all actual creation of matter, united with form, to be the work of God.'

'Surely not the substance of God himself? Perhaps you mean that this form — this octahedron — is a divine concept.'

'I understand such to be the doctrine of the Church.'

'Then it seems that God uses this concept habitually to create this very common crystal. One question more, and only one, if you will permit me to come to the point. Does the matter — the material — of which this crystal is made affect in any way the form — the nature, the soul — of the universal equilateral triangle as you see it bounding these eight plane surfaces?'

'That I do not know, and do not think essential to decide. As far as these triangles are individual, they are made so by the will of God, and not by the substance you call triangle. The universal — the abstract right angle, or any other abstract form — is only an idea, a concept, to which reality, individuality, or what we might call energy is wanting. The only true energy, except man's free will, is God.'

'Very good, Mr. Abélard! we can now reach our issue. You affirm that, just as the line does not exist in space, although the eye sees little else in space, so the triangle does not exist in this crystal, although the crystal shows eight of them, each perfect. You are aware that on this line which does not exist, and its combination in this triangle which does not exist, rests the whole fabric of mathematics with all its necessary truths. In other words, you know that in this line, though it does not exist, is

bound up the truth of the only branch of human knowledge which claims absolute certainty for human processes. You admit that this line and triangle, which are mere figments of our human imagination, not only exist independent of us in the crystal, but are, as we suppose, habitually and invariably used by God Himself to give form to the matter contained within the planes of the crystal. Yet to this line and triangle you deny reality. To mathematical truth, you deny compulsive force. You hold that an equilateral triangle may, to you and all other human individuals, be a right-angled triangle if you choose to imagine it so. Allow me to say, without assuming any claim to superior knowledge, that to me your logic results in a different conclusion. If you are compelled, at one point or another of the chain of being, to deny existence to a substance, surely it should be to the last and feeblest. I see nothing to hinder you from denying your own existence, which is, in fact, impossible to demonstrate. Certainly you are free, in logic, to argue that Socrates and Plato are mere names — that men and matter are phantoms and dreams. No one ever has proved or ever can prove the contrary. Infallibly, a great philosophical school will some day be founded on that assumption. I venture even to recommend it to your acute and sceptical mind; but I cannot conceive how, by any process of reasoning, sensual or supersensual, you can reach the conclusion that the single form of truth which instantly and inexorably compels our submission to its laws — is nothing.'

Thus far, all was familiar ground; certainly at least as familiar as the Pons Asinorum; and neither of the two champions had need to feel ruffled in temper by the discussion. The real struggle began only at this point; for until this point was reached, both positions were about equally tenable. Abélard had hitherto rested quietly on the defensive, but William's last thrust obliged him to strike in his turn, and he drew himself up for what, five hundred years later, was called the 'Coup de Jarnac':

'I do not deny,' he begins; 'on the contrary, I affirm that the universal, whether we call it humanity, or equilateral triangle,

has a sort of reality as a concept; that it is something; even a substance, if you insist upon it. Undoubtedly the sum of all individual men results in the concept of humanity. What I deny is that the concept results in the individual. You have correctly stated the essence of the point and the line as sources of our concept of the infinite; what I deny is that they are divisions of the infinite. Universals cannot be divided; what is capable of division cannot be a universal. I admit the force of your analogy in the case of the crystal; but I am obliged to point out to you that, if you insist on this analogy, you will bring yourself and me into flagrant contradiction with the fixed foundations of the Church. If the energy of the triangle gives form to the crystal, and the energy of the line gives reality to the triangle, and the energy of the infinite gives substance to the line, all energy at last becomes identical with the ultimate substance, God Himself. Socrates becomes God in small; Judas is identical with both; humanity is of the divine essence, and exists, wholly and undivided, in each of us. The equilateral triangle we call humanity exists, therefore, entire, identical, in you and me, as a subdivision of the infinite line, space, energy, or substance, which is God. I need not remind you that this is pantheism, and that if God is the only energy, human free will merges in God's free will; the Church ceases to have a reason for existence; man cannot be held responsible for his own acts, either to the Church or to the State; and finally, though very unwillingly, I must, in regard for my own safety, bring the subject to the attention of the Archbishop, which, as you know better than I, will lead to your seclusion, or worse.'

Whether Abélard used these precise words is nothing to the point. The words he left on record were equivalent to these. As translated by M. de Rémusat from a manuscript entitled: 'Glossulae magistri Petri Baelardi super Porphyrium,' the phrase runs: 'A grave heresy is at the end of this doctrine; for, according to it, the divine substance which is recognized as admitting of no form, is necessarily identical with every substance in particular and with all substance in general.' Even had he not stated the heresy so bluntly, his objection necessarily

ushed William in face of it. Realism, when pressed, always led
o pantheism. William of Champeaux and Bishop or Arch-
ishop Hildebert were personal friends, and Hildebert's divine
ubstance left no more room for human free will than Abélard
aw in the geometric analogy imagined for William. Through-
ut the history of the Church for fifteen hundred years, when-
ver this theological point has been pressed against churchmen
has reduced them to evasion or to apology. Admittedly, the
eak point of realism was its fatally pantheistic term.

Of course, William consulted his friends in the Church, prob-
bly Archbishop Hildebert among the rest, before deciding
hether to maintain or to abandon his ground, and the result
owed that he was guided by their advice. Realism was the
oman arch — the only possible foundation for any Church;
ecause it assumed unity, and any other scheme was compelled
o prove it, for a starting-point. Let us see, for a moment,
hat became of the dialogue, when pushed into theology, in
rder to reach some of the reasons which reduced William to
icit abandonment of a doctrine he could never have sur-
endered unless under compulsion. That he was angry is sure,
r Abélard, by thus thrusting theology into dialectics, had
ruck him a foul blow; and William knew Abélard well:

'Ah!' he would have rejoined; 'you are quick, M. du Pallet,
o turn what I offered as an analogy, into an argument of heresy
gainst my person. You are at liberty to take that course if you
noose, though I give you fair warning that it will lead you far.
ut now I must ask you still another question. This concept
at you talk about — this image in the mind of man, of God,
matter; for I know not where to seek it — whether is it a
ality or not?'

'I hold it as, in a manner, real.'

'I want a categorical answer: Yes or No!'

'Distinguo! (I must qualify.)'

'I will have no qualifications. A substance either is, or not.
hoose!'

To this challenge Abélard had the choice of answering Yes,
of answering No, or of refusing to answer at all. He seems to

have done the last; but we suppose him to have accepted th wager of battle, and to answer:

'Yes, then!'

'Good!' William rejoins; 'now let us see how your pantheis differs from mine. My triangle exists as a reality, or wh science will call an energy, outside my mind, in God, and impressed on my mind as it is on a mirror, like the triangle c the crystal, its energy giving form. Your triangle you say also an energy, but an essence of my mind itself; you thrust into the mind as an integral part of the mirror; identically th same concept, energy, or necessary truth which is inherent i God. Whatever subterfuge you may resort to, sooner or late you have got to agree that your mind is identical with God nature as far as that concept is concerned. Your pantheism goe further than mine. As a doctrine of the Real Presence peculia to yourself, I can commend it to the Archbishop together wit your delation of me.'

Supposing that Abélard took the opposite course, and an swered:

'No! my concept is a mere sign.'

'A sign of what, in God's name!'

'A sound! a word! a symbol! an echo only of my ignorance

'Nothing, then! So truth and virtue and charity do not exi at all. You suppose yourself to exist, but you have no means knowing God; therefore, to you God does not exist except as a echo of your ignorance; and, what concerns you most, th Church does not exist except as your concept of certain in dividuals, whom you cannot regard as a unity, and who sup pose themselves to believe in a Trinity which exists only as sound, or a symbol. I will not repeat your words, M. d Pallet, outside this cloister, because the consequences to yo would certainly be fatal; but it is only too clear that you are materialist, and as such your fate must be decided by a Churc Council, unless you prefer the stake by judgment of a secula court.'

In truth, pure nominalism — if, indeed, any one ever main tained it — afforded no cover whatever. Nor did Abélard

concept help the matter, although for want of a better refuge, the Church was often driven into it. Conceptualism was a device, like the false wooden roof, to cover and conceal an inherent weakness of construction. Unity either is, or is not. If soldiers, no matter in what number, can never make an army, and worshippers, though in millions, do not make a Church, and all humanity united would not necessarily constitute a State, equally little can their concepts, individual or united, constitute the one or the other. Army, Church, and State, each is an organic whole, complex beyond all possible addition of units, and not a concept at all, but rather an animal that thinks, creates, devours, and destroys. The attempt to bridge the chasm between multiplicity and unity is the oldest problem of philosophy, religion, and science, but the flimsiest bridge of all is the human concept, unless somewhere, within or beyond it, an energy not individual is hidden; and in that case the old question instantly reappears: What is that energy?

Abélard would have done well to leave William alone, but Abélard was an adventurer, and William was a churchman. To win a victory over a churchman is not very difficult for an adventurer, and is always a tempting amusement, because the ambition of churchmen to shine in worldly contests is disciplined and checked by the broader interests of the Church: but the victory is usually sterile, and rarely harms the churchman. The Church cares for its own. Probably the bishops advised William not to insist on his doctrine, although every bishop may have held the same view. William allowed himself to be silenced without a judgment, and in that respect stands almost if not quite alone among schoolmen. The students divined that he had sold himself to the Church, and consequently deserted him. Very soon he received his reward in the shape of the highest dignity open to private ambition — a bishopric. As Bishop of Chalons-sur-Marne he made for himself a great reputation, which does not concern us, although it deeply concerned the unfortunate Abélard, for it happened, either by chance or design, that within a year or two after William established himself at Chalons, young Bernard of Citeaux chose

a neighbouring diocese in which to establish a branch of the Cistercian Order, and Bishop William took so keen an interest in the success of Bernard as almost to claim equal credit for it. Clairvaux was, in a manner, William's creation, although not in his diocese, and yet, if there was a priest in all France who fervently despised the schools, it was young Bernard. William of Champeaux, the chief of schoolmen, could never have gained Bernard's affections. Bishop William of Chalons must have drifted far from dialectics into mysticism in order to win the support of Clairvaux, and train up a new army of allies who were to mark Abélard for an easy prey.

Meanwhile Abélard pursued his course of triumph in the schools, and in due time turned from dialectics to theology, as every ambitious teacher could hardly fail to do. His affair with Héloïse and their marriage seem to have occupied his time in 1117 or 1118, for they both retired into religious orders in 1119, and he resumed his lectures in 1120. With his passion for rule, he was fatally certain to attempt ruling the Church as he ruled the schools; and, as it was always enough for him that any point should be tender in order that he should press upon it, he instantly and instinctively seized on the most sensitive nerve of the Church system to wrench it into his service. He became a sort of apostle of the Holy Ghost.

That the Trinity is a mystery was a law of theology so absolute as in a degree to hide the law of philosophy that the Trinity was meant as a solution of a greater mystery still. In truth, as a matter of philosophy, the Trinity was intended to explain the eternal and primary problem of the process by which unity could produce diversity. Starting from unity alone, philosophers found themselves unable to stir hand or foot until they could account for duality. To the common, ignorant peasant, no such trouble occurred, for he knew the Trinity in its simpler form as the first condition of life, like time and space and force. No human being was so stupid as not to understand that the father, mother, and child made a trinity, returning into each other, and although every father, every mother, and every child, from the dawn of man's intelligence, had asked

hy, and had never received an answer more intelligible to
iem than to philosophers, they never showed difficulty in
ccepting that trinity as a fact. They might even, in their
eneficent blindness, ask the Church why that trinity, which
ad satisfied the Egyptians for five or ten thousand years, was
ot good enough for churchmen. They themselves were doing
ieir utmost, though unconsciously, to identify the Holy Ghost
ith the Mother, while philosophy insisted on excluding the
uman symbol precisely because it was human and led back to
n infinite series. Philosophy required three units to start
om; it posed the equilateral triangle, not the straight line, as
ie foundation of its *deometry*. The first straight line, infinite in
xtension, must be assumed, and its reflection engendered the
cond, but whence came the third? Under protest, philosophy
as compelled to accept the symbol of Father and Son as a
atter of faith, but, if the relation of Father and Son were ac-
pted for the two units which reflected each other, what rela-
on expressed the Holy Ghost? In philosophy, the product of
vo units was not a third unit, but diversity, multiplicity, in-
nity. The subject was, for that reason, better handled by the
rabs, whose reasoning worked back on the Christian theol-
gists and made the point more delicate still. Common people,
ke women and children and ourselves, could never under-
and the Trinity; naturally, intelligent people understood it
ill less, but for them it did not matter; they did not need to
nderstand it provided their neighbours would leave it alone.

The mass of mankind wanted something nearer to them than
ther the Father or the Son; they wanted the Mother, and the
hurch tried, in what seems to women and children and our-
lves rather a feeble way, to give the Holy Ghost, as far as
ossible, the Mother's attributes — Love, Charity, Grace; but
spite of conscientious effort and unswerving faith, the
oly Ghost remained to the mass of Frenchmen somewhat
part, feared rather than loved. The sin against the Holy
host was a haunting spectre, for no one knew what else it
as.

Naturally the Church, and especially its official theologists,

took an instinctive attitude of defence whenever a question
this subject was asked, and were thrown into a flutter of irrit
tion whenever an answer was suggested. No man likes to ha
his intelligence or good faith questioned, especially if he h
doubts about it himself. The distinguishing essence of the Ho
Ghost, as a theological substance, was its mystery. That th
mystery should be touched at all was annoying to every o
who knew the dangers that lurked behind the veil, but that
should be freely handled before audiences of laymen by perso
of doubtful character was impossible. Such licence must end
discrediting the whole Trinity under pretence of making it i
telligible.

Precisely this licence was what Abélard took, and on it h
chose to insist. He said nothing heretical; he treated the Hol
Ghost with almost exaggerated respect, as though other church
men did not quite appreciate its merits; but he would not le
it alone, and the Church dreaded every moment lest, with h
enormous influence in the schools, he should raise a new storm
by his notorious indiscretion. Yet so long as he merely lectured
he was not molested; only when he began to publish his theolog
did the Church interfere. Then a council held at Soissons i
1121 abruptly condemned his book in block, without readin
it, without specifying its errors, and without hearing his defence
obliged him to throw the manuscript into the fire with his ow
hands, and finally shut him up in a monastery.

He had invited the jurisdiction by taking orders, but even th
Church was shocked by the summary nature of the judgmen
which seems to have been quite irregular. In fact, the Churc
has never known what it was that the council condemned. Th
latest great work on the Trinity, by the Jesuit Father de Régnon
suggests that Abélard's fault was in applying to the Trinity hi
theory of concepts. 'Yes!' he says; 'the mystery is explained
the key of conceptualism has opened the tabernacle, and Sain
Bernard was right in saying that, thanks to Abélard, every on
can penetrate it and contemplate it at his ease; "even the grace
less, even the uncircumcised." Yes! the Trinity is explained
but after the manner of the Sabellians. For to identify th

ersons in the terms of human concepts is, in the same stroke, destroy their "subsistances propres."'

Although the Saviour seems to have felt no compunctions bout identifying the persons of the Trinity in the terms of uman concepts, it is clear that tourists and heretics had best ave the Church to deal with its 'subsistances propres,' and ith its own members, in its own way. In sum, the Church pre-rred to stand firm on the Roman arch, and the architects em now inclined to think it was right; that scholastic science id the pointed arch proved to be failures. In the twelfth ntury the world may have been rough, but it was not stupid. ne Council of Soissons was held while the architects and sculp-rs were building the west porch of Chartres and the Aquilon Mont-Saint-Michel. Averroës was born at Cordova in 1126; mar Khayyám died at Naishapur in 1123. Poetry and meta-ysics owned the world, and their quarrel with theology was private, family dispute. Very soon the tide turned decisively Abélard's favour. Suger, a political prelate, became minister the King, and in March, 1122, Abbot of Saint-Denis. In oth capacities he took the part of Abélard, released him from straint, and even restored to him liberty of instruction, at ast beyond the jurisdiction of the Bishop of Paris. Abélard en took a line of conduct singularly parallel with that of ernard. Quitting civilized life he turned wholly to religion. 'hen the agreement,' he said, 'had been executed by both rties to it, in presence of the King and his ministers, I next tired within the territory of Troyes, upon a desert spot which knew, and on a piece of ground given me by certain per-ns, I built, with the consent of the bishop of the diocese, a rt of oratory of reeds and thatch, which I placed under the vocation of the Holy Trinity. . . . Founded at first in the name the Holy Trinity, then placed under its invocation, it was lled "Paraclete" in memory of my having come there as a gitive and in my despair having found some repose in the con-lations of divine grace. This denomination was received by any with great astonishment, and some attacked it with vio-nce under pretext that it was not permitted to consecrate a

church specially to the Holy Ghost any more than to God t
Father, but that, according to ancient usage, it must be dec
cated either to the Son alone or to the Trinity.'

The spot is still called Paraclete, near Nogent-sur-Seine,
the parish of Quincey about halfway between Fontainebleı
and Troyes. The name Paraclete as applied to the Holy Ghc
meant the Consoler, the Comforter, the Spirit of Love ar
Grace; as applied to the oratory by Abélard it meant a renew
of his challenge to theologists, a separation of the Persons i
the Trinity, a vulgarization of the mystery; and, as his stor
frankly says, it was so received by many. The spot was not s
remote but that his scholars could follow him, and he invite
them to do so. They came in great numbers, and he lecture
to them. 'In body I was hidden in this spot; but my renow
overran the whole world and filled it with my word.' Un
doubtedly Abélard taught theology, and, in defiance of th
council that had condemned him, attempted to define the per
sons of the Trinity. For this purpose he had fallen on a spot onl
fifty or sixty miles from Clairvaux where Bernard was inspirin
a contrary spirit of religion; he placed himself on the direc
line between Clairvaux and its source at Citeaux near Dijon
indeed, if he had sought for a spot as central as possible to th
active movement of the Church and the time, he could have hi
on none more convenient and conspicuous unless it were th
city of Troyes itself, the capital of Champagne, some thirt
miles away. The proof that he meant to be aggressive is fur
nished by his own account of the consequences. Two rivals, h
says, one of whom seems to have been Bernard of Clairvaux
took the field against him, 'and succeeded in exciting th
hostility of certain ecclesiastical and secular authorities, b
charging monstrous things, not only against my faith, but alsc
against my manner of life, to such a point as to detach from m
some of my principal friends; even those who preserved som
affection for me dared no longer display it, for fear. God i
my witness that I never heard of the union of an ecclesiastica
assembly without thinking that its object was my condemna
tion.' The Church had good reason, for Abélard's conduc

lefied discipline; but far from showing harshness, the Church his time showed a true spirit of conciliation most creditable o Bernard. Deeply as the Cistercians disliked and distrusted Abélard, they did not violently suppress him, but tacitly consented to let the authorities buy his silence with Church patronage.

The transaction passed through Suger's hands, and offered n ordinary example of political customs as old as history. An bbey in Brittany became vacant; at a hint from the Duke Conan, which may well be supposed to have been suggested rom Paris, the monks chose Abélard as their new abbot, and ent some of their number to Suger to request permission for Abélard, who was a monk of Saint-Denis, to become Abbot of Saint-Gildas-de-Rhuys, near Vannes, in Brittany. Suger probably intimated to Abélard, with a certain degree of authority, that he had better accept. Abélard, 'struck with terror, nd as it were under the menace of a thunderbolt,' accepted. Of course the dignity was in effect banishment and worse, and vas so understood on all sides. The Abbaye-de-Saint-Gildas-e-Rhuys, though less isolated than Mont-Saint-Michel, was ot an agreeable winter residence. Though situated in Abérd's native province of Brittany, only sixty or eighty miles rom his birthplace, it was for him a prison with the ocean round it and a singularly wild people to deal with; but he ould have endured his lot with contentment, had not discipline or fear or pledge compelled him to hold his tongue. 'rom 1125, when he was sent to Brittany until 1135 when he eappeared in Paris, he never opened his mouth to lecture. Never, as God is my witness — never would I have acquiesced n such an offer, had it not been to escape, no matter how, from he vexations with which I was incessantly overwhelmed.'

A greater career in the Church was thus opened for him gainst his will, and if he did not die an archbishop it was not holly the fault of the Church. Already he was a great prelate, he equal in rank of the Abbé Suger, himself, of Saint-Denis; f Peter the Venerable of Cluny; of Bernard of Clairvaux. He vas in a manner a peer of the realm. Almost immediately he

felt the advantages of the change. Barely two years passed when, in 1127, the Abbé Suger, in reforming his subordinate Abbey of Argenteuil, was obliged to disturb Héloïse, then a sister in that congregation. Abélard was warned of the necessity that his wife should be protected, and with the assistance of every one concerned, he was allowed to establish his wife at the Paraclete as head of a religious sisterhood. 'I returned there; I invited Héloïse to come there with the nuns of her community; and when they arrived, I made them the entire donation of the oratory and its dependencies.... The bishops cherished her as their daughter; the abbots as their sister; the laymen as their mother.' This was merely the beginning of her favour and of his. For ten years they were both of them petted children of the Church.

The formal establishment of Héloïse at the Paraclete took place in 1129. In February, 1130, on the death of the Pope at Rome, a schism broke out, and the cardinals elected two popes, one of whom took the name of Innocent II, and appealed for support to France. Suger saw a great political opportunity and used it. The heads of the French Church agreed in supporting Innocent, and the King summoned a Church council at Étampes to declare its adhesion. The council met in the late summer; Bernard of Clairvaux took the lead; Peter the Venerable, Suger of Saint-Denis, and the Abbot of Saint-Gildas-de-Rhuys supported him; Innocent himself took refuge at Cluny in October, and on January 20, 1131, he stopped at the Benedictine Abbey of Morigny. The Chronicle of the monastery, recording the abbots present on this occasion — the Abbot of Morigny itself, of Feversham; of Saint-Lucien of Beauvais, and so forth — added especially: 'Bernard of Clairvaux, who was then the most famous pulpit orator in France; and Peter Abélard, Abbot of Saint-Gildas, also a monk and the most eminent master of the schools to which the scholars of almost all the Latin races flowed.'

Innocent needed popular support; Bernard and Abélard were the two leaders of popular opinion in France. To attach them, Innocent could refuse nothing. Probably Abélard remained

ith Innocent, but in any case Innocent gave him, at Auxerre, the following November, a diploma, granting to Héloïse, ioress of the Oratory of the Holy Trinity, all rights of property er whatever she might possess, against all assailants; which oves Abélard's favour. At this time he seems to have taken eat interest in the new sisterhood. 'I made them more fre- ient visits,' he said, 'in order to work for their benefit.' He orked so earnestly for their benefit that he scandalized the ighbourhood and had to argue at unnecessary length his in- cence of evil. He went so far as to express a wish to take fuge among them and to abandon his abbey in Brittany. e professed to stand in terror of his monks; he excommuni- ted them; they paid no attention to him; he appealed to the pe, his friend, and Innocent sent a special legate to enforce eir submission 'in presence of the Count and the Bishops.'

Even since that, they would not keep quiet. And quite recently, since the expulsion of those of whom I have spoken, when I returned to the abbey, abandoning myself to the rest of the brothers who inspired me with less distrust, I found them even worse than the others. It was no longer a question of poison; it was the dagger that they now sharpened against my breast. I had great difficulty in escaping from them under the guidance of one of the neighbouring lords. Similar perils menace me still and every day I see the sword raised over my head. Even at table I can hardly breathe. . . . This is the torture that I endure every moment of the day; I, a poor monk, raised to the prelacy, becoming more miserable in becoming more great, that by my example the ambitious may learn to curb their greed.

With this, the 'Story of Calamity' ends. The allusions to nocent II seem to prove that it was written not earlier than 32; the confession of constant and abject personal fear sug- ts that it was written under the shock caused by the atro- us murder of the Prior of Saint-Victor by the nephews of Archdeacon of Paris, who had also been subjected to re- ms. This murder was committed a few miles outside of the lls of Paris, on August 20, 1133. The 'Story of Calamity' evidently a long plea for release from the restraints imposed

on its author by his position in the prelacy and the tacit, c possibly the express, contract he had made, or to which he ha submitted, in 1125. This plea was obviously written in order t serve one of two purposes: either to be placed before th authorities whose consent alone could relieve Abélard from h restraints; or to justify him in throwing off the load of th Church, and resuming the profession of schoolman. Supposin the second explanation, the date of the paper would be more c less closely fixed by John of Salisbury, who coming to Par as a student, in 1136, found Abélard lecturing on the Mon Sainte-Geneviève; that is to say, not under the licence of th Bishop of Paris or his Chancellor, but independently, in private school of his own, outside the walls. 'I attached myse to the Palatine Peripatician who then presided on the hill c Sainte-Geneviève, the doctor illustrious, admired by al There, at his feet, I received the first elements of the dialecti art, and according to the measure of my poor understanding received with all the avidity of my soul everything that cam from his mouth.'

This explanation is hardly reasonable, for no prelate who wa not also a temporal lord would have dared throw off his officia duties without permission from his superiors. In Abélard' case the only superior to whom he could apply, as Abbot o Saint-Gildas in Brittany, was probably the Pope himself. In the year 1135 the moment was exceedingly favourable for ask ing privileges. Innocent, driven from Rome a second time, had summoned a council at Pisa for May 30 to help him. Louis-le Gros and his minister Suger gave at first no support to this council, and were overruled by Bernard of Clairvaux who in a manner drove them into giving the French clergy permission to attend. The principal archbishops, a number of bishops, and sixteen abbots went to Pisa in May, 1135, and some one of them certainly asked Innocent for favours on behalf of Abélard, which the Pope granted.

The proof is a papal bull, dated in 1136, in favour of Héloïse, giving her the rank and title of Abbess, accompanied by another giving to the Oratory of the Holy Trinity the rank and

name of Monastery of the Paraclete, a novelty in Church tradition so extraordinary or so shocking that it still astounds churchmen. With this excessive mark of favour Innocent could have felt little difficulty in giving Abélard the permission to absent himself from his abbey, and with this permission in his hands Abélard might have lectured on dialectics to John of Salisbury in the summer or autumn of 1136. He did not, as far as known, resume lectures on theology.

Such success might have turned heads much better balanced than that of Abélard. With the support of the Pope and at least one of the most prominent cardinals, and with relations at court with the ministers of Louis-le-Gros, Abélard seemed to himself as strong as Bernard of Clairvaux, and a more popular champion of reform. The year 1137, which has marked a date for so many great points in our travels, marked also the moment of Abélard's greatest vogue. The victory of Aristotle and the pointed arch seemed assured when Suger effected the marriage of the young Prince Louis to the heiress Eleanor of Guienne. The exact moment was stamped on the façade of his exquisite creation, the Abbey Church of Saint-Denis, finished in 1140 and still in part erect. From Saint-Denis to Saint-Sulpice was but a step. Louis-le-Grand seems to stand close in succession to Louis-le-Gros.

Fortunately for tourists, the world, restless though it might be, could not hurry, and Abélard was to know of the pointed arch very little except its restlessness. Just at the apex of his triumph, August 1, 1137, Louis-le-Gros died. Six months afterwards the anti-pope also died, the schism ended, and Innocent II needed Abélard's help no more. Bernard of Clairvaux became Pope and King at once. Both Innocent and Louis-le-Jeune were in a manner his personal creations. The King's brother Henry, next in succession, actually became a monk at Clairvaux not long afterwards. Even the architecture told the same story, for at Saint-Denis, though the arch might simulate a point, the old Romanesque lines still assert as firmly as ever their spiritual control. The flèche that gave the façade a new spirit was not added until 1215, which marks Abélard's error in terms of time.

Once arrived at power, Bernard made short work of all that tried to resist him. During 1139 he seems to have been too busy or too ill to take up the affair of Abélard, but in March, 1140, the attack was opened in a formal letter from William of Saint-Thierry, who was Bernard's closest friend, bringing charges against Abélard before Bernard and the Bishop of Chartres. The charges were simple enough:

> Pierre Abélard seized the moment, when all the masters of ecclesiastical doctrine have disappeared from the scene of the world, to conquer a place apart, for himself, in the schools, and to create there an exclusive domination. He treats Holy Scripture as though it were dialectics. It is a matter with him of personal invention and annual novelties. He is the censor and not the disciple of the faith; the corrector and not the imitator of the authorized masters.

In substance, this is all. The need of action was even simpler. Abélard's novelties were becoming a danger; they affected not only the schools, but also even the Curia at Rome. Bernard must act because there was no one else to act: 'This man fears you; he dreads you! if you shut your eyes, whom will he fear? . . . The evil has become too public to allow a correction limited to amicable discipline and secret warning.' In fact, Abélard's works were flying about Europe in every direction, and every year produced a novelty. One can still read them in M. Cousin's collected edition; among others, a volume on ethics: 'Ethica, seu Scito teipsum'; on theology in general, an epitome; a 'Dialogus inter Philosophum, Judaeum et Christianum'; and, what was perhaps the most alarming of all, an abstract of quotations from standard authorities, on the principle of the parallel column, showing the fatal contradictions of the authorized masters, and entitled 'Sic et Non'! Not one of these works but dealt with sacred matters in a spirit implying that the Essence of God was better understood by Pierre du Pallet than by the whole array of bishops and prelates in Europe! Had Bernard been fortunate enough to light upon the 'Story of Calamity,' which must also have been in existence, he would have found there Abélard's own childlike avowal that he taught theology

because his scholars 'said that they did not want mere words; that one can believe only what one understands; and that it is ridiculous to preach to others what one understands no better than they do.' Bernard himself never charged Abélard with any presumption equal to this. Bernard said only that 'he sees nothing as an enigma, nothing as in a mirror, but looks on everything face to face.' If this had been all, even Bernard could scarcely have complained. For several thousand years mankind has stared Infinity in the face without pretending to be the wiser; the pretension of Abélard was that, by his dialectic method, he could explain the Infinite, while all other theologists talked mere words; and by way of proving that he had got to the bottom of the matter, he laid down the ultimate law of the universe as his starting-point: 'All that God does,' he said, 'He wills necessarily and does it necessarily; for His goodness is such that it pushes Him necessarily to do all the good He can, and the best He can, and the quickest He can. . . . Therefore it is of necessity that God willed and made the world.' Pure logic admitted no contingency; it was bound to be necessitarian or ceased to be logical; but the result, as Bernard understood it, was that Abélard's world, being the best and only possible, need trouble itself no more about God, or Church, or man.

Strange as the paradox seems, Saint Bernard and Lord Bacon, though looking at the world from opposite standpoints, agreed in this: that the scholastic method was false and mischievous, and that the longer it was followed, the greater was its mischief. Bernard thought that because dialectics led wrong, therefore faith led right. He saw no alternative, and perhaps in fact there was none. If he had lived a century later, he would have said to Thomas Aquinas what he said to a schoolman of his own day: 'if you had once tasted true food' — if you knew what true religion is — 'how quick you would leave those Jew makers of books (literatoribus judaeis) to gnaw their crusts by themselves!' Locke or Hume might perhaps still have resented a little the 'literator judaeus,' but Faraday or Clerk-Maxwell would have expressed the same opinion with only the change

of a word: 'If the twelfth century had once tasted true science how quick they would have dropped Avicenna and Averroës! Science admits that Bernard's disbelief in scholasticism was well founded, whatever it may think of his reasons. The only point that remains is personal: Which is the more sympathetic, Bernard or Abélard?

The Church feels no doubt, but is a bad witness. Bernard is not a character to be taken or rejected in a lump. He was many-sided, and even toward Abélard he showed more than one surface. He wanted no unnecessary scandals in the Church; he had too many that were not of his seeking. He seems to have gone through the forms of friendly negotiation with Abélard although he could have required nothing less than Abélard's submission and return to Brittany, and silence; terms which Abélard thought worse than death. On Abélard's refusal, Bernard began his attack. We know, from the 'Story of Calamity,' what Bernard's party could not have certainly known then — the abject terror into which the very thought of a council had for twenty years thrown Abélard whenever he was threatened with it; and in 1140 he saw it to be inevitable. He preferred to face it with dignity, and requested to be heard at a council to meet at Sens in June. One cannot admit that he felt the shadow of a hope to escape. At the utmost he could have dreamed of nothing more than a hearing. Bernard's friends, who had a lively fear of his dialectics, took care to shut the door on even this hope. The council was carefully packed and overawed. The King was present; archbishops, bishops, abbots, and other prelates by the score; Bernard acted in person as the prosecuting attorney; the public outside were stimulated to threaten violence. Abélard had less chance of a judicial hearing than he had had at Soissons twenty years before. He acted with a proper sense of their dignity and his own by simply appearing and entering an appeal to Rome. The council paid no attention to the appeal, but passed to an immediate condemnation. His friends said that it was done after dinner; that when the volume of Abélard's 'Theology' was produced and the clerk began to read it aloud, after the first few sentences the bishops ceased

ttention, talked, joked, laughed, stamped their feet, got angry, nd at last went to sleep. They were waked only to growl Damnamus — namus,' and so made an end. The story may e true, for all prelates, even in the twelfth century, were not Bernards of Clairvaux or Peters of Cluny; all drank wine, and ll were probably sleepy after dinner; while Abélard's writings re, for the most part, exceedingly hard reading. The clergy knew quite well what they were doing; the judgment was certain long in advance, and the council was called only to register it. Political trials were usually mere forms.

The appeal to Rome seems to have been taken seriously by Bernard, which is surprising unless the character of Innocent II inspired his friends with doubts unknown to us. Innocent owed everything to Bernard, while Abélard owed everything to Innocent. The Pope was not in a position to alienate the French Church or the French King. To any one who knows only what is now to be known, Bernard seems to have been sure of the Curia, yet he wrote in a tone of excitement as though he feared Abélard's influence there even more than at home. He became abusive; Abélard was a crawling viper (coluber tortuosus) who had come out of his hole (egressus est de caverna sua), and after the manner of a hydra (in similitudinem hydrae), after having one head cut off at Soissons, had thrown out seven more. He was a monk without rule; a prelate without responsibility; an abbot without discipline; 'disputing with boys; conversing with women.' The charges in themselves seem to be literally true, and would not in some later centuries have been thought very serious; neither faith nor morals were impugned. On the other hand, Abélard never affected or aspired to be a saint, while Bernard always affected to judge the acts and motives of his fellow-creatures from a standpoint of more than worldly charity. Bernard had no right to Abélard's vices; he claimed to be judged by a higher standard; but his temper was none of the best, and his pride was something of the worst; which gave to Peter the Venerable occasion for turning on him sharply with a rebuke that cut to the bone: 'You perform all the difficult religious duties,' wrote Peter to the saint

who wrought miracles; 'you fast; you watch; you suffer; bu you will not endure the easy ones — you do not love (non v levia ferre, ut diligas).'

This was the end of Abélard. Of course the Pope confirme the judgment, and even hurried to do so in order that he migh not be obliged to give Abélard a hearing. The judgment wa not severe, as judgments went; indeed, it amounted to littl more than an order to keep silence, and, as it happened, wa never carried into effect. Abélard, at best a nervous invalid started for Rome, but stopped at Cluny, perhaps the mos agreeable stopping-place in Europe. Personally he seems t have been a favourite of Abbot Peter the Venerable, whos love for Bernard was not much stronger than Abélard's o Suger's. Bernard was an excessively sharp critic, and spared worldliness, or what he thought lack of spirituality, in no pre late whatever; Clairvaux existed for nothing else, politically than as a rebuke to them all, and Bernard's enmity was thei bond of union. Under the protection of Peter the Venerable the most amiable figure of the twelfth century, and in the mos agreeable residence in Europe, Abélard remained unmolested at Cluny, occupied, as is believed, in writing or revising hi treatises, in defiance of the council. He died there two year later, April 21, 1142, in full communion, still nominal Abbot o Saint-Gildas, and so distinguished a prelate that Peter the Ven erable thought himself obliged to write a charming letter t Héloïse at the Paraclete not far away, condoling with her or the loss of a husband who was the Socrates, the Aristotle, the Plato, of France and the West; who, if among logicians he had rivals, had no master; who was the prince of study, learned eloquent, subtle, penetrating; who overcame everything by the force of reason, and was never so great as when he passed to true philosophy, that of Christ.

All this was in Latin verses, and seems sufficiently strong considering that Abélard's philosophy had been so recently and so emphatically condemned by the entire Church, including Peter the Venerable himself. The twelfth century had thi singular charm of liberty in practice, just as its architecture

new no mathematical formula of precision; but Peter's letter o Héloïse went further still, and rang with absolute passion:

Thus, dear and venerable sister in God, he to whom you are united, after your tie in the flesh, by the better and stronger bond of the divine love; he, with whom, and under whom, you have served the Lord, the Lord now takes, in your place, like another you, and warms in His bosom; and, for the day of His coming, when shall sound the voice of the archangel and the trumpet of God descending from heaven, He keeps him to restore him to you by His grace.

XV. The Mystics

THE schoolmen of the twelfth century thought they could reach God by reason; the Council of Sens, guided by Saint Bernard, replied that the effort was futile and likely to be mischievous. The council made little pretence of knowing or caring what method Abélard followed; they condemned any effort at all on that line; and no sooner had Bernard silenced the Abbot of Saint-Gildas for innovation than he turned about and silenced the Bishop of Poitiers for conservatism. Neither in the twelfth nor in any other century could three men have understood alike the meaning of Gilbert de la Porée, who seems to one high authority unworthy of notice and to another worthy of an elaborate but quite unintelligible commentary. When M. Rousselet and M. Hauréau judge so differently of a voluminous writer, the Council at Rheims which censured Bishop Gilbert in 1148 can hardly have been clear in mind. One dare hazard no more than a guess at Gilbert's offence, but the guess is tolerably safe that he, like Abélard, insisted on discussing and analyzing the Trinity. Gilbert seems to have been a rigid realist, and he reduced to a correct syllogism the idea of the ultimate substance — God. To make theology a system capable of scholastic definition he had to suppose behind the active deity, a passive abstraction, or absolute substance without attributes; and then the attributes — justice, mercy, and the rest — fell into rank as secondary substances. 'Formam dei divinitatem appellant.' Bernard answered him by insisting with his usual fiery conviction that the Church should

ay down the law, once for all, and inscribe it with iron and liamond, that Divinity — Divine Wisdom — is God. In hilosophy and science the question seems to be still open. Whether anything ultimate exists — whether substance is more han a complex of elements — whether the 'thing in itself' is reality or a name — is a question that Faraday and Clerk-Maxwell seem to answer as Bernard did, while Haeckel answers t as Gilbert did; but in theology even a heretic wonders how doubt was possible. The absolute substance behind the ttributes seems to be pure Spinoza.

This supposes that the heretic understands what Gilbert or Haeckel meant, which is certainly a mistake; but it is possible hat he may see in part what Bernard meant and this is enough f it is all. Abélard's necessitarianism and Gilbert's Spinozism, f Bernard understood them right, were equally impossible heology, and the Church could by no evasion escape the neces-ity of condemning both. Unfortunately, Bernard could not ut his foot down so roughly on the schools without putting it n Aristotle as well; and, for at least sixty years after the Council f Rheims, Aristotle was either tacitly or expressly prohibited. One cannot stop to explain why Aristotle himself would have een first to forbid the teaching of what was called by his name n the Middle Ages; but you are bound to remember that this eriod between 1140 and 1200 was that of Transition architec-ure and art. One must go to Noyon, Soissons, and Laon to tudy the Church that trampled on the schools; one must ecall how the peasants of Normandy and the Chartrain were rusading for the Virgin in 1145, and building her flèches at Chartres and Saint-Pierre-sur-Dives while Bernard was con-lemning Gilbert at Rheims in 1148; we must go to the poets to ee what they all meant by it; but the sum is an emotion — lear and strong as love and much clearer than logic — whose harm lies in its unstable balance. The Transition is the quilibrium between the love of God — which is faith — and he logic of God — which is reason; between the round arch nd the pointed. One may not be sure which pleases most, but ne need not be harsh toward people who think that the

moment of balance is exquisite. The last and highest momer is seen at Chartres, where, in 1200, the charm depends on th constant doubt whether emotion or science is uppermost. A Amiens, doubt ceases; emotion is trained in school; Thoma Aquinas reigns.

Bernard of Clairvaux and Thomas of Aquino were bot artists — very great artists, if the Church pleases — and on need not decide which was the greater; but between them a region of pure emotion — of poetry and art — which is mor interesting than either. In every age man has been apt to drear uneasily, rolling from side to side, beating against imaginar bars, unless, tired out, he has sunk into indifference or scepti cism. Religious minds prefer scepticism. The true saint a profound sceptic; a total disbeliever in human reason, wh has more than once joined hands on this ground with some wh were at best sinners. Bernard was a total disbeliever in scho lasticism; so was Voltaire. Bernard brought the society of h time to share his scepticism, but could give the society no othe intellectual amusement to relieve its restlessness. His crusad failed; his ascetic enthusiasm faded; God came no nearer. there was in all France, between 1140 and 1200, a more typica Englishman of the future Church of England type than Joh of Salisbury, he has left no trace; and John wrote a descriptio of his time which makes a picturesque contrast with the pictur painted by Abélard, his old master, of the century at its begin ning. John weighed Abélard and the schools against Bernar and the cloister, and coolly concluded that the way to truth le rather through Citeaux, which brought him to Chartres a Bishop in 1176, and to a mild scepticism in faith. 'I prefer t doubt,' he said, 'rather than rashly define what is hidden.' Th battle with the schools had then resulted only in creating thre kinds of sceptics: the disbelievers in human reason; the passiv agnostics; and the sceptics proper, who would have bee atheists had they dared. The first class was represented by th School of Saint-Victor; the second by John of Salisbury himsel the third, by a class of schoolmen whom he called Cornificii, a though they made a practice of inventing horns of dilemm

n which to fix their opponents; as, for example, they asked whether a pig which was led to market was led by the man or he cord. One asks instantly: What cord? — whether Grace, or instance, or Free Will?

Bishop John used the science he had learned in the school nly to reach the conclusion that, if philosophy were a science t all, its best practical use was to teach charity — love. Even he early, superficial debates of the schools, in 1100–50, had so xhausted the subject that the most intelligent men saw how ttle was to be gained by pursuing further those lines of thought. The twelfth century had already reached the point where the eventeenth century stood when Descartes renewed the attempt o give a solid, philosophical basis for deism by his celebrated Cogito, ergo sum.' Although that ultimate fact seemed new o Europe when Descartes revived it as the starting-point of his emonstration, it was as old and familiar as Saint Augustine o the twelfth century, and as little conclusive as any other ssumption of the Ego or the Non-Ego. The schools argued, ccording to their tastes, from unity to multiplicity, or from ultiplicity to unity; but what they wanted was to connect the wo. They tried realism and found that it led to pantheism. They tried nominalism and found that it ended in materialism. They attempted a compromise in conceptualism which begged he whole question. Then they lay down, exhausted. In the eventeenth century the same violent struggle broke out again, nd wrung from Pascal the famous outcry of despair in which he French language rose, perhaps for the last time, to the grand tyle of the twelfth century. To the twelfth century it belongs; o the century of faith and simplicity; not to the mathematical ertainties of Descartes and Leibnitz and Newton, or to the athematical abstractions of Spinoza. Descartes had proclaimed his famous conceptual proof of God: 'I am conscious f myself, and must exist; I am conscious of God and He must xist.' Pascal wearily replied that it was not God he doubted, ut logic. He was tortured by the impossibility of rejecting an's reason by reason; unconsciously sceptical, he forced imself to disbelieve in himself rather than admit a doubt of

God. Man had tried to prove God, and had failed: 'Th metaphysical proofs of God are so remote (éloignées) from th reasoning of men, and so contradictory (impliquées, far-fetched that they make little impression; and even if they served t convince some people, it would only be during the instant tha they see the demonstration; an hour afterwards they fear t have deceived themselves.' Moreover, this kind of proof coul lead only to a speculative knowledge, and to know God onl in that way was not to know Him at all. The only way to reac God was to deny the value of reason, and to deny reason wa scepticism:

En voyant l'aveuglement et la misère de l'homme et ces contrariétés étonnantes qui se découvrent dans sa nature; et regardant tout l'univers muet, et l'homme sans lumière, abandonné à lui-même et comme égaré dans ce recoin de l'univers, sans savoir qui l'y a mis, ce qu'il y est venu faire, ce qu'il deviendra en mourant; j'entre en effroi comme un homme qu'on aurait porté endormi dans une île déserte et effroyable, et qui s'éveillerait sans connaître où il est et sans avoir aucun moyen d'en sortir. Et sur cela j'admire comment on n'entre pas en désespoir d'un si misérable état. Je vois d'autres personnes auprès de moi de semblable nature, et je leur demande s'ils sont mieux instruits que moi, et ils me disent que non. Et sur cela, ces misérables égarés, ayant regardé autour d'eux, et ayant vu quelques objets plaisants, s'y sont donnés et s'y sont attachés. Pour moi je n'ai pu m'y arrêter ni me reposer dans la société de ces personnes, en tout semblables à moi, misérables comme moi, impuissants comme moi. Je vois qu'ils ne m'aideraient pas à mourir; je mourrai seul; il faut donc faire comme si j'étais seul: or, si j'étais seul, je ne bâtirais pas des maisons; je ne m'embarrasserais point dans des occupations tumultuaires; je ne chercherais l'estime de personne, mais je tâcherais seulement à découvrir la vérité.

When I see the blindness and misery of man and the astonishing contradictions revealed in his nature; and observe the whole universe mute, and man without light, abandoned to himself, as though lost in this corner of the universe, without knowing who put him here, or what he has come here to do, or what will become of him in dying; I fear like a man who has been carried when asleep into a desert and fearful island, and has waked without knowing where he is and without having means of rescue. And thereupon I wonder how man escapes despair at so miserable a estate. I see others about me, like myself, and I ask them if they are better informed than I, and they tell me no. And then these wretched wanderers after looking about them and seeing some pleasant object, have given themselves up and attached themselves to it. As for me, I cannot stop there, or rest in the company of these persons, wholly like myself, miserable like me, impotent like me. I see that they would not help me to die; I shall die alone; I must then act as though alone; but if I were alone I should not build houses; I should not fret myself with bustling occupations; I should seek the esteem of no one, but I should try only to discover the truth

Ainsi, considérant combien il y a d'apparence qu'il y a autre chose que ce que je vois, j'ai recherché si ce Dieu dont tout le monde parle n'aurait pas laissé quelques marques de lui. Je regarde de toutes parts et ne vois partout qu' obscurité. La nature ne m'offre rien que ne soit matière de doute et d'inquiétude. Si je n'y voyais rien qui marquât une divinité, je me déterminerais à n'en rien croire. Si je voyais partout les marques d'un Créateur, je me reposerais en paix dans la foi. Mais voyant trop pour nier, et trop peu pour m'assurer, je suis dans un état à plaindre, et où j'ai souhaité cent fois que si un Dieu soutient la nature, elle le marquât sans équivoque; et que, si les marques qu'elle en donne sont trompeuses, elle les supprimât tout à fait; qu'elle dit tout ou rien, afin que je visse quel parti je dois suivre.

So, considering how much appearance there is that something exists other than what I see, I have sought whether this God of Whom every one talks may not have left some marks of Himself. I search everywhere, and see only obscurity everywhere. Nature offers me nothing but matter of possible doubt and disquiet. If I saw there nothing to mark a divinity, I should make up my mind to believe nothing of it. If I saw everywhere the marks of a Creator, I should rest in peace in faith. But seeing too much to deny, and too little to affirm, I am in a pitiable state, where I have an hundred times wished that, if a God supports nature, she would show it without equivocation; and that, if the marks she gives are deceptive, she would suppress them wholly; that she say all or nothing, that I may see my path.

This is the true Prometheus lyric, but when put back in its place it refuses to rest at Port-Royal which has a right to nothing but precision; it has but one real home — the Abbaye-de-Saint-Victor. The mind that recoils from itself can only commit a sort of ecstatic suicide; it must absorb itself in God; and in the bankruptcy of twelfth-century science the Western Christian seemed actually on the point of attainment; he, like Pascal, touched God behind the veil of scepticism.

The schools had already proved one or two points which need never have been discussed again. In essence, religion was love; in no case was it logic. Reason can reach nothing except through the senses; God, by essence, cannot be reached through the senses; if He is to be known at all, He must be known by contact of spirit with spirit, essence with essence; directly; by emotion; by ecstasy; by absorption of our existence in His; by substitution of his spirit for ours. The world had no need to wait five hundred years longer in order to hear this same result reaffirmed by Pascal. Saint Francis of Assisi had affirmed it loudly enough, even if the voice of Saint Bernard had been less powerful than it was. The Virgin had asserted it in tones

more gentle, but any one may still see how convincing, who stops a moment to feel the emotion that lifted her wonderful Chartres spire up to God.

The Virgin, indeed, made all easy, for it was little enough she cared for reason or logic. She cared for her baby, a simple matter, which any woman could do and understand. That, and the grace of God, had made her Queen of Heaven. The Trinity had its source in her — totius Trinitatis nobile Triclinium — and she was maternity. She was also poetry and art. In the bankruptcy of reason, she alone was real.

So Guillaume de Champeaux, half a century dead, came to life again in another of his creations. His own Abbey of Saint-Victor, where Abélard had carried on imaginary disputes with him, became the dominant school. As far as concerns its logic, we had best pass it by. The Victorians needed logic only to drive away logicians, which was hardly necessary after Bernard had shut up the schools. As for its mysticism, all training is much alike in idea, whether one follows the six degrees of contemplation taught by Richard of Saint-Victor, or the eightfold noble way taught by Gautama Buddha. The theology of the school was still less important, for the Victorians contented themselves with orthodoxy only in the sense of caring as little for dogma as for dialectics; their thoughts were fixed on higher emotions. Not Richard the teacher, but Adam the poet, represents the school to us, and when Adam dealt with dogma he frankly admitted his ignorance and hinted his indifference; he was, as always, conscientious; but he was not always, or often, as cold. His statement of the Trinity is a marvel; but two verses of it are enough:

Digne loqui de personis
Vim transcendit rationis,
  Excedit ingenia.
Quid sit gigni, quid processus,
Me nescire sum professus,
  Sed fide non dubia.

Qui sic credit, non festinet,
Et a via non declinet
  Insolenter regia.

Of the Trinity to reason
Leads to licence or to treason
  Punishment deserving.
What is birth and what procession
Is not mine to make profession,
  Save with faith unswerving.

Thus professing, thus believing,
Never insolently leaving
  The highway of our faith,

Servet fidem, formet mores,	Duty weighing, law obeying,
Nec attendat ad errores	Never shall we wander straying
Quos damnat Ecclesia.	Where heresy is death.

Such a school took natural refuge in the Holy Ghost and the Virgin — Grace and Love — but the Holy Ghost, as usual, profited by it much less than the Virgin. Comparatively little of Adam's poetry is expressly given to the Saint Esprit, and too large a part of this has a certain flavour of dogma:

Qui procedis ab utroque	The Holy Ghost is of the Father and
Genitore Genitoque	of the Son; neither made nor created nor
Pariter, Paraclite!	begotten, but proceeding.
. . . .	
Amor Patris, Filiique	The whole three Persons are coeternal
Par amborum et utrique	together; and coequal.
Compar et consimilis!	

This sounds like a mere versification of the Creed, yet when Adam ceased to be dogmatic and broke into true prayer, his verse added a lofty beauty even to the Holy Ghost; a beauty too serious for modern rhyme:

Oh, juvamen oppressorum,	Oh, helper of the heavy-laden,
Oh, solamen miserorum,	Oh, solace of the miserable,
Pauperum refugium,	Of the poor, the refuge,
Da contemptum terrenorum!	Give contempt of earthly pleasures!
Ad amorem supernorum	To the love of heavenly treasures
Trahe desiderium!	Lift our hearts' desire!
Consolator et fundator,	Consolation and foundation,
Habitator et amator,	Dearest friend and habitation
Cordium humilium,	Of the lowly-hearted,
Pelle mala, terge sordes,	Dispel our evil, cleanse our foulness,
Et discordes fac concordes,	And our discords turn to concord,
Et affer praesidium!	And bring us succour!

Adam's scholasticism was the most sympathetic form of mediaeval philosophy. Even in prose, the greatest writers have not often succeeded in stating simply and clearly the fact that infinity can make itself finite, or that space can make itself bounds, or that eternity can generate time. In verse, Adam did it as easily as though he were writing any other miracle — as Gaultier de Coincy told the Virgin's — and any one who thinks that the task was as easy as it seems, has only to try it and see

whether he can render into a modern tongue any single word which shall retain the whole value of the word which Adam has chosen:

Ne periret homo reus	To death condemned by awful sentence,
Redemptorem misit Deus,	God recalled us to repentance,
Pater unigenitum;	Sending His only Son;
Visitavit quos amavit	Whom He loved He came to cherish;
Nosque vitae revocavit	Whom His justice doomed to perish,
Gratia non meritum.	By grace to life He won.
Infinitus et Immensus,	Infinity, Immensity,
Quem non capit ullus sensus	Whom no human eye can see
Nec locorum spatia,	Or human thought contain,
Ex eterno temporalis,	Made of Infinity a space,
Ex immenso fit localis,	Made of Immensity a place,
Ut restauret omnia.	To win us Life again.

The English verses, compared with the Latin, are poor enough, with the canting jingle of a cheap religion and a thin philosophy, but by contrast and comparison they give higher value to the Latin. One feels the dignity and religious quality of Adam's chants the better for trying to give them an equivalent. One would not care to hazard such experiments on poetry of the highest class like that of Dante and Petrarch, but Adam was conventional both in verse and thought, and aimed at obtaining his effects from the skilful use of the Latin sonorities for the purposes of the chant. With dogma and metaphysics he dealt boldly and even baldly as he was required to do, and successfully as far as concerned the ear or the voice; but poetry was hardly made for dogma; even the Trinity was better expressed mathematically than by rhythm. With the stronger emotions, such as terror, Adam was still conventional, and showed that he thought of the chant more than of the feeling and exaggerated the sound beyond the value of the sense. He could never have written the 'Dies Irae.' He described the shipwreck of the soul in magnificent sounds without rousing an emotion of fear; the raging waves and winds that swept his bark past the abysses and up to the sky were as conventional as the sirens, the dragons, the dogs, and the pirates that lay in wait. The mast nodded as usual; the sails were rent; the sailors

ceased work; all the machinery was classical; only the prayer to the Virgin saved the poetry from sinking like the ship; and yet, when chanted, the effect was much too fine to bear translation:

Ave, Virgo singularis,
Mater nostri Salutaris,
Quae vocaris Stella Maris,
Stella non erratica;
Nos in hujus vitae mari
Non permitte naufragari,
Sed pro nobis Salutari
Tuo semper supplica!

Saevit mare, fremunt venti,
Fluctus surgunt turbulenti;
Navis currit, sed currenti
Tot occurrunt obvia!
Hic sirenes voluptatis,
Draco, canes cum piratis,
Mortem pene desperatis
Haec intentant omnia.

Post abyssos, nunc ad coelum
Furens unda fert phaselum;
Nutat malus, fluit velum,
Nautae cessat opera;
Contabescit in his malis
Homo noster animalis;
Tu nos, Mater spiritalis,
Pereuntes libera!

Finer still is the famous stanza sung at Easter, in which Christ rises, the Lion of Judah, in the crash of the burst gates of death, at the roar of the Father Lion:

Sic de Juda, leo fortis,
Fractis portis dirae mortis,
Die surgens tertia,
Rugiente voce patris
Ad supernae sinum matris
Tot revexit spolia.

For terror or ferocity or images of pain, the art of the twelfth century had no use except to give a higher value to their images of love. The figures on the west portal of Chartres are alive with the spirit of Adam's poetry, but it is the spirit of the Virgin. Like Saint Bernard, Adam lavished his affections on Mary, and even

more than Saint Bernard he could claim to be her poet-laureate. Bernard was not himself author of the hymn 'Stella Maris' which brought him the honour of the Virgin's personal recognition, but Adam was author of a dozen hymns in which her perfections were told with equal fervour, and which were sung at her festivals. Among these was the famous

Salve, Mater Pietatis,
Et totius Trinitatis
Nobile Triclinium!

a compliment so refined and yet so excessive that the Venerable Thomas Cantimpratensis who died a century later, about 1280, related in his 'Apiarium' that when 'venerabilis Adam' wrote down these lines, Mary herself appeared to him and bent her head in recognition. Although the manuscripts do not expressly mention this miracle, they do contain, at that stanza, a curious note expressing an opinion, apparently authorized by the prior, that, if the Virgin had seen fit to recognize the salutation of the Venerable Adam in this manner, she would have done only what he merited: 'ab ea resalutari et regratiari meruit.'

Adam's poems are still on the shelves of most Parisian book-shops, as common as 'Aucassins' and better known than much poetry of our own time; for the mediaeval Latin rhymes have a delightful sonority and simplicity that keep them popular because they were not made to be read but to be sung. One does not forget their swing:

Infinitus et Immensus;

or —

Oh, juvamen oppressorum;

or —

Consolatrix miserorum
Suscitatrix mortuorum.

The organ rolls through them as solemnly as ever it did in the Abbey Church; but in mediaeval art so much more depends on the mass than on the measure — on the dignity than on the detail — that equivalents are impossible. Even Walter Scott was content to translate only three verses of the 'Dies Irae.'

At best, Viollet-le-Duc could reproduce only a sort of modern Gothic; a more or less effaced or affected echo of a lost emotion which the world never felt but once and never could feel again. Adam composed a number of hymns to the Virgin, and, in them all, the feeling counts for more, by far, than the sense. Supposing we choose the simplest and try to give it a modern version, aiming to show, by comparison, the difference of sound; one can perhaps manage to recover a little of the simplicity, but give it the grand style one cannot; or, at least, if any one has ever done both, it is Walter Scott, and merely by placing side by side the 'Dies Irae' and his translation of it, one can see at a glance where he was obliged to sacrifice simplicity only to obtain sound:

Dies irae, dies illa,	That day of wrath, that dreadful day,
Solvet seclum in favilla,	When heaven and earth shall pass away,
Teste David cum Sibylla.	What power shall be the sinner's stay?
	How shall he meet that dreadful day?
Quantus tremor est futurus,	
Quando judex est venturus,	
Cuncta stricte discussurus!	When shrivelling like a parchèd scroll
	The flaming heavens together roll;
Tuba mirum spargens sonum	When louder yet and yet more dread
Per sepulchra regionum,	Swells the high trump that wakes the
Coget omnes ante thronum.	dead.

As translation the last line is artificial.

The 'Dies Irae' does not belong, in spirit, to the twelfth century; it is sombre and gloomy like the Last Judgments on the thirteenth-century portals; it does not love. Adam loved. His verses express the Virgin; they are graceful, tender, fervent, and they hold the same dignity which cannot be translated:

In hac valle lacrimarum	In this valley full of tears,
Nihil dulce, nihil carum,	Nothing softens, nothing cheers,
Suspecta sunt omnia;	All is suspected lure;
Quid hic nobis erit tutum,	What safety can we hope for, here,
Cum nec ipsa vel virtutum	When even virtue faints for fear
Tuta sit victoria!	Her victory be not sure!
Caro nobis adversatur,	Within, the flesh a traitor is,
Mundus carni suffragatur	Without, the world encompasses,
In nostram perniciem;	A deadly wound to bring.
Hostis instat, nos infestans,	The foe is greedy for our spoils,
Nunc se palam manifestans,	Now clasping us within his coils,
Nunc occultans rabiem.	Or hiding now his sting.

Et peccamus et punimur,
Et diversis irretimur
  Laqueis venantium.
O Maria, mater Dei,
Tu, post Deum, summa spei,
  Tu dulce refugium;

Tot et tantis irretiti,
Non valemus his reniti
  Ne vi nec industria;
Consolatrix miserorum,
Suscitatrix mortuorum,
  Mortis rompe retia!

We sin, and penalty must pay,
And we are caught, like beasts of prey,
  Within the hunter's snares.
Nearest to God! oh, Mary Mother!
Hope can reach us from none other,
  Sweet refuge from our cares;

We have no strength to struggle longer,
For our bonds are more and stronger
  Than our hearts can bear!
You who rest the heavy-laden,
You who lead lost souls to Heaven,
  Burst the hunter's snare!

The art of this poetry of love and hope, which marked the mystics, lay of course in the background of shadows which marked the cloister. 'Inter vania nihil vanius est homine.' Man is an imperceptible atom always trying to become one with God. If ever modern science achieves a definition of energy, possibly it may borrow the figure: Energy is the inherent effort of every multiplicity to become unity. Adam's poetry was an expression of the effort to reach absorption through love, not through fear; but to do this thoroughly he had to make real to himself his own nothingness; most of all, to annihilate pride, for the loftiest soul can comprehend that an atom — say, of hydrogen — which is proud of its personality, will never merge in a molecule of water. The familiar verse: 'Oh, why should the spirit of mortal be proud?' echoes Adam's epitaph to this day:

Haeres peccati, natura filius irae,
  Exiliique reus nascitur omnis homo.

Unde superbit homo, cujus conceptio culpa,
  Nasci poena, labor vita, necesse mori?

Heir of sin, by nature son of wrath,
  Condemned to exile, every man is born.

Whence is man's pride, whose conception fault,
  Birth pain, life labour, and whose death is sure?

Four concluding lines, not by him, express him even better:

Hic ego qui jaceo, miser et miserabilis Adam,
  Unam pro summo munere posco precem.
Peccavi, fateor; veniam peto; parce fatenti;
  Parce, pater: fratres, parcite; parce, Deus!

One does not conceive that Adam insisted so passionately on his sins because he thought them — or himself — important before the Infinite. Chemistry does not consider an atom of oxygen as in itself important, yet if it wishes to get a volume of pure gas, it must separate the elements. The human soul was an atom that could unite with God only as a simple element. The French mystics showed in their mysticism the same French reasonableness; the sense of measure, of logic, of science; the allegiance to form; the transparency of thought, which the French mind has always shown on its surface like a shell of nacre. The mystics were in substance rather more logical than the schoolmen and much more artistic in their correctness of line and scale. At bottom, French saints were not extravagant. One can imagine a Byzantine asserting that no French saint was ever quite saintly. Their aims and ideals were very high, but not beyond reaching and not unreasonable. Drag the French mind as far from line and logic as space permits, the instant it is freed it springs back to the classic and tries to look consequent.

This paradox, that the French mystics were never mystical, runs through all our travels, so obstinately recurring in architecture, sculpture, legend, philosophy, religion, and poetry, that it becomes tiresome; and yet it is an idea that, in spite of Matthew Arnold and many other great critics, never has got lodgment in the English or German mind, and probably never will. Every one who loves travel will hope that it never may. If you are driven to notice it as the most distinctive mark of French art, it is not at all for the purpose of arguing a doubtful law, but only in order to widen the amusement of travel. We set out to travel from Mont-Saint-Michel to Chartres, and no farther; there we stop; but we may still look across the boundary to Assisi for a specimen of Italian Gothic architecture, a scheme of colour decoration, or still better for a mystic to compare with the Bernadines and Victorians. Every one who knows anything of religion knows that the ideal mystic saint of western Europe was Francis of Assisi, and that Francis, though he loved France, was as far as possible from being French; though not in the least

French, he was still the finest flower from the French mediaeval garden; and though the French mystics could never have understood him, he was what the French mystics would have liked to be or would have thought they liked to be as long as they knew him to be not one of themselves. As an Italian or as a Spaniard, Francis was in harmony with his world; as a Frenchman, he would have been out of place even at Clairvaux, and still more among his own Cordeliers at the doors of the Sorbonne.

Francis was born in 1186, at the instant when French art was culminating, or about to culminate, in the new cathedrals of Laon and Chartres, on the ruins of scholastic religion and in the full summer of the Courts of Love. He died in 1226, just as Queen Blanche became Regent of France and when the Cathedral of Beauvais was planned. His life precisely covered the most perfect moment of art and feeling in the thousand years of pure and confident Christianity. To an emotional nature like his, life was still a phantasm or 'concept' of crusade against real or imaginary enemies of God, with the 'Chanson de Roland' for a sort of evangel, and a feminine ideal for a passion. He chose for his mistress 'domina nostra paupertas,' and the rules of his order of knighthood were as visionary as those of Saint Bernard were practical. 'Isti sunt fratres mei milites tabulae rotundae, qui latitant in desertis'; his Knights of the Round Table hid themselves for their training in deserts of poverty, simplicity, humility, innocence of self, absorption in nature, in the silence of God, and, above all, in love and joy incarnate, whose only influence was example. Poverty of body in itself mattered nothing; what Francis wanted was poverty of pride, and the external robe or the bare feet were outward and necessary forms of protection against its outward display. Against riches or against all external and visible vanity, rules and laws could be easily enforced if it were worth while, although the purest humility would be reached only by those who were indifferent and unconscious of their external dress; but against spiritual pride the soul is defenceless, and of all its forms the subtlest and the meanest is pride of intellect. If 'nostra

domina paupertas' had a mortal enemy, it was not the pride beneath a scarlet robe, but that in a schoolmaster's ferule, and of all schoolmasters the vainest and most pretentious was the scholastic philosopher. Satan was logic. Lord Bacon held much the same opinion. 'I reject the syllogism,' was the starting-point of his teaching as it was the essence of Saint Francis's, and the reasons of both men were the same though their action was opposite. 'Let men please themselves as they will in admiring and almost adoring the human mind, this is certain: that, as an uneven mirror distorts the rays of objects according to its own figure and section, so the mind . . . cannot be trusted. . . .' Bacon's first object was the same as that of Francis, to humiliate and if possible destroy the pride of human reason; both of them knew that this was their most difficult task, and Francis, who was charity incarnate, lost his self-control whenever he spoke of the schools, and became almost bitter, as though in constant terror of a poison or a cancer. 'Praeodorabat etiam tempora non longe ventura in quibus jam praesciebat scientiam inflativam debere esse occasionem ruinae.' He foresaw the time not far off when puffed-up science would be the ruin of his 'domina paupertas.' His struggle with this form of human pride was desperate and tragical in its instant failure. He could not make even his novices understand what he meant. The most impossible task of the mind is to reject in practice the reflex action of itself, as Bacon pointed out, and only the highest training has sometimes partially succeeded in doing it. The schools — ancient, mediaeval, or modern — have almost equally failed, but even the simple rustics who tried to follow Francis could not see why the rule of poverty should extend to the use of a psalter. Over and over again he explained vehemently and dramatically as only an Italian or a Spaniard could, and still they failed to catch a notion of what he meant.

Quum ergo venisset beatus Franciscus ad locum ubi erat ille novitius, dixit ille novitius: 'Pater, mihi esset magna consolatio habere psalterium, sed licet generalis illud mihi concesserit, tamen vellem ipsum habere, pater, de con-

So when Saint Francis happened to come to the place where the novice was, the novice said: 'Father, it would be a great comfort to me to have a psalter, but though my general should grant it, still I would rather have it,

scientia tua.' Cui beatus Franciscus respondit: 'Carolus imperator, Rolandus et Oliverus et omnes palatini et robusti viri qui potentes fuerunt in proelio, prosequendo infideles cum multa sudore et labore usque ad mortem, habuerunt de illis victoriam memorialiter, et ad ultimum ipsi sancti martyres sunt mortui pro fide Christi in certamine. Nunc autem multi sunt qui sola narratione eorum quae illi fecerunt volunt recipere honorem et humanam laudem. Ita et inter nos sunt multi qui solum recitando et praedicando opera quae sancti fecerunt volunt recipere honorem et laudem; . . . postquam habueris psalterium, concupisces et volueris habere breviarium; et postquam habueris breviarium, sedebis in cathedra tanquam magnus prelatus et dices fratri tuo: Apporta mihi breviarium!'

Haec autem dicens beatus Franciscus cum magno fervore spiritus accepit de cinere et posuit super caput suum, et ducendo manum super caput suum in circuitu sicut ille qui lavat caput, dicebat: 'Ego breviarium! ego breviarium!' et sic reiteravit multoties ducendo manum per caput. Et stupefactus et verecundatus est frater ille. . . . Elapsis autem pluribus mensibus quum esset beatus Franciscus apud locum sanctae Mariae de Portiuncula, juxta cellam post domum in via, praedictus frater iterum locutus est ei de psalterio. Cui beatus Franciscus dixit: 'Vade et facias de hoc sicut dicet tibi minister tuus!' Quo audito, frater ille coepit redire per viam unde venerat. Beatus autem Franciscus remanens in via coepit considerare illud quod dixerat illi fratri, et statim clamavit post eum, dicens: 'Expecta me, frater! expecta!' Et ivit usque ad eum et ait illi: 'Revertere mecum, frater, et ostende mihi locum ubi dixi tibi quod faceres de psalterio sicut diceret minister tuus.' Quum ergo pervenissent ad locum,

father, with your knowledge too.' Saint Francis answered: 'The Emperor Charlemagne, Roland and Oliver, and all the palatines and strong men who were potent in battle, pursuing the infidels with much toil and sweat even to death, triumphed over them memorably [without writing it?], and at last these holy martyrs died in the contest for the faith of Christ. But now there are many who, merely by telling of what those men did, want to receive honour and human praise. So, too, among us are many who, merely by reciting and preaching the works which the saints have done, want to receive honour and praise; . . . After you have got the psalter, you will covet and want a breviary; and after getting the breviary, you will sit on your throne like a bishop, and will say to your brother: "Bring me the breviary!"'

While saying this, Saint Francis with great vehemence took up a handful of ashes and spread it over his head; and moving his hand about his head in a circle as though washing it, said: 'I, breviary! I, breviary!' and so kept on repeatedly moving his hand about his head; and stupefied and ashamed was that novice. . . . But several months afterwards when Saint Francis happened to be near Sta Maria de Portiuncula, by the cell behind the house on the road, the same brother again spoke to him about the psalter. Saint Francis replied: 'Go and do about it as your director says.' On this the brother turned back, but Saint Francis, standing in the road, began to reflect on what he had said, and suddenly called after him: 'Wait for me, brother! wait!' and going after him, said: 'Return with me, brother, and show me the place where I told you to do as your director should say, about the psalter.' When they had come back to it, Saint Francis bent before the brother, and said: 'Mea culpa, brother, mea culpa! because

eatus Franciscus genuflexit coram ratre illo, et dixit: 'Mea culpa, frater! nea culpa! quia quicunque vult esse rater Minor non debet habere nisi unicam, sicut regula sibi concedit, et ordam et femoralia et qui manifesta ecessitate coguntur calciamenta.'

whoever wishes to be a Minorite must have nothing but a tunic, as the rule permits, and the cord, and the loincloth, and what covering is manifestly necessary for the limbs.'

So vivid a picture of an actual mediaeval saint stands out upon his simple background as is hardly to be found elsewhere in all he records of centuries, but if the brother himself did not understand it and was so shamed and stupefied by Francis's vehemence, the world could understand it no better; the Order itself was ashamed of Saint Francis because they understood him too well. They hastened to suppress this teaching against science, although it was the life of Francis's doctrine. He taught that the science of the schools led to perdition because it was puffed up with emptiness and pride. Humility, simplicity, poverty were alone true science. They alone led to heaven. Before the tribunal of Christ, the schoolmen would be condemned, 'and, with their dark logic (opinionibus tenebrosis) shall be plunged into outer darkness with the spirits of the darkness.' They were devilish, and would perish with the devils.

One sees instantly that neither Francis of Assisi nor Bacon of Verulam could have hoped for peace with the schools; twelfth-century ecstasy felt the futility of mere rhetoric quite as keenly as seventeenth-century scepticism was to feel it; and yet when Francis died in 1226 at Assisi, Thomas was just being born at Aquino some two hundred kilometres to the southward. True scholasticism had not begun. Four hundred years seem long for the human mind to stand still — or go backward; the more because the human mind was never better satisfied with itself than when thus absorbed in its mirror; but with that chapter we have nothing to do. The pleasantest way to treat it was that of Saint Francis; half-serious, half-jesting; as though, after all, in the thought of infinity, four hundred years were at most only a seriocomic interlude. At Assisi, once, when a theologian attacked Fra Egidio by the usual formal arraignment in syllogisms, the brother waited until the conclusions were laid

down, and then, taking out a flute from the folds of his rob he played his answer in rustic melodies. The soul of Sain Francis was a rustic melody and the simplest that ever reache so high an expression. Compared with it, Theocritus and Virg are as modern as Tennyson and ourselves.

All this shows only what Saint Francis was not; to understan what he was and how he goes with Saint Bernard and Sain Victor through the religious idyll of Transition architecture one must wander about Assisi with the 'Floretum' or 'Fioretti in one's hand; — the legends which are the gospel of Franci as the evangels are the gospel of Christ, who was reincarnated i Assisi. We have given a deal of time to showing our ow sceptical natures how simple the architects and decorators c Chartres were in their notions of the Virgin and her wants but French simple-mindedness was already complex compare with Italian. The Virgin was human; Francis was elementar nature itself, like sun and air; he was Greek in his joy of life:

... Recessit inde et venit inter Cannarium et Mevanium. Et respexit quasdam arbores juxta viam in quibus residebat tanta multitudo avium diversarum quod nunquam in partibus illis visa similis multitudo. In campo insuper juxta praedictas arbores etiam multitudo maxima residebat. Quam multitudinem sanctus Franciscus respiciens et admirans, facto super eum Spiritu Dei, dixit sociis: 'Vobis hic me in via exspectantibus, ibo et praedicabo sororibus nostris aviculis.' Et intravit in campum ad aves quae residebant in terra. Et statim quum praedicare incepit omnes aves in arboribus residentes descenderunt ad eum et simul cum aliis de campo immobiles permanserunt, quum tamen ipse inter eas iret plurimas tunica contingendo. Et nulla earum penitus movebatur, sicut recitavit frater Jacobus de Massa, sanctus homo, qui omnia supradicta habuit ab ore fratris Massei, qui fuit unus de iis qui tunc erant socii sancti patris.

... He departed thence and cam between Cannara and Bevagna; an near the road he saw some trees o which perched so great a number birds as never in those parts had bee seen the like. Also in the field beyon near these same trees, a very grea multitude rested on the ground. Th multitude, Saint Francis seeing wit wonder, the spirit of God descendin on him he said to his companions: 'Wa for me on the road, while I go an preach to our sisters the little birds And he went into the field where th birds were on the ground. And as soo as he began to preach, all the birds i the trees came down to him and wit those in the field stood quite still, eve when he went among them touchin many with his robe. Not one of ther moved, as Brother James of Mass related, a saintly man who had th whole story from the mouth of Brothe Masseo who was one of those then wit the sainted father.

Quibus avibus sanctus Franciscus ait: Multum tenemini Deo, sorores meae ves, et debetis eum semper et ubique ıudare propter liberum quem ubique abetis volatum, propter vestitum uplicatum et triplicatum, propter abitum pictum et ornatum, propter ictum sine vestro labore paratum, ropter cantum a Creatore vobis ıtimatum, propter numerum ex Dei enedictione multiplicatum, propter emen vestrum a Deo in arca reserva- ım, propter elementum aeris vobis eputatum. Vos non seminatis neque ıetitis, et Deus vos pascit; et dedit obis flumina et fontes ad potandum, ıontes et colles, saxa et ibices ad efugium, et arbores altas ad nidifican- um; et quum nec filare nec texere iatis, praebet tam vobis quam vestris liis necessarium indumentum. Unde ıultum diligit vos Creator qui tot eneficia contulit. Quapropter cavete, rores meae aviculae, ni sitis ingratae d semper laudare Deum studete.'

To these birds, Saint Francis said: 'Much are you bound to God, birds, my sisters, and everywhere and always must you praise him for the free flight you everywhere have; for the double and triple covering; for the painted and decorated robe; for the food prepared without your labour; for the song taught you by the Creator; for your number multiplied by God's blessing; for your seed preserved by God in the ark; for the element of air allotted to you. You neither sow nor reap, and God feeds you; and has given you rivers and springs to drink at, mountains and hills, rocks and wild goats for refuge, and high trees for nesting; and though you know neither how to spin nor to weave, He gives both you and your children all the garments you need. Whence much must the Creator love you, Who confers so many blessings. Therefore take care, my small bird sisters, never to be ungrateful, but always strive to praise God.'

Fra Ugolino, or whoever wrote from the dictation of Brother ames of Massa, after the tradition of Brother Masseo of Marig- ano reported Saint Francis's sermon in absolute good faith as aint Francis probably made it and as the birds possibly received . All were God's creatures, brothers and sisters, and God alone new or knows whether or how far they understand each other; ut Saint Francis, in any case, understood them and believed ıat they were in sympathy with him. As far as the birds or olves were concerned, it was no great matter, but Francis id not stop with vertebrates or even with organic forms. 'Nor as it surprising,' said the 'Speculum,' 'if fire and other creatures metimes revered and obeyed him; for, as we who were with im very frequently saw, he held them in such affection and so uch delighted in them, and his soul was moved by such pity nd compassion for them, that he would not see them roughly andled, and talked with them with such evident delight as they were rational beings':

Nam quadam vice, quum sederet juxta ignem, ipso nesciente, ignis invasit pannos ejus de lino, sive brachas, juxta genu, quumque sentiret calorem ejus nolebat ipsum extinguere. Socius autem ejus videns comburi pannos ejus cucurrit ad eum volens extinguere ignem, ipse vero prohibuit ei, dicens: 'Noli, frater, carissime, noli male facere igni!' Et sic nullo modo voluit quod extingueret ipsum. Ille vero festinanter ivit ad fratrem qui erat guardianus ipsius, et duxit eum ad beatum Franciscum, et statim contra voluntatem beati Francisci, extinxit ignem. Unde quacunque necessitate urgente nunquam voluit extinguere ignem vel lampadem vel candelam, tantum pietate movebatur ad ipsum. Nolebat etiam quod frater projiceret ignem vel lignum fumigantem de loco ad locum sicut solet fieri, sed volebat ut plane poneret ipsum in terra ob reverentiam illius cujus est creatura.

For once when he was sitting by th fire, a spark, without his knowing i caught his linen drawers and set ther burning near the knee, and when h felt the heat he would not extinguish it but his companion, seeing his clothe on fire, ran to put it out, and he forbad it, saying: 'Don't, my dearest brother don't hurt the fire!' So he utterl refused to let him put it out, and th brother hurried off to get his guardian and brought him to Saint Francis, an together they put out the fire at onc against Saint Francis's will. So, n matter what the necessity, he woul never put out fire or a lamp or candle so strong was his feeling for it; he woul not even let a brother throw fire o a smoking log from place to place, as i usual, but wanted it placed gentl (piano) on the ground, out of respec for Him Whose creature it is.

The modern tourist, having with difficulty satisfied himsel that Saint Francis acted thus in good faith, immediately ex claims that he was a heretic and should have been burned; but in truth, the immense popular charm of Saint Francis, as of the Virgin, was precisely his heresies. Both were illogical and heretical by essence; — in strict discipline, in the days of the Holy Office, a hundred years later, both would have been burned by the Church, as Jeanne d'Arc was, with infinitely less reason, in 1431. The charm of the twelfth-century Church was that it knew how to be illogical — no great moral authority ever knew it better — when God Himself became illogical. I cared no more than Saint Francis, or Lord Bacon, for the syllogism. Nothing in twelfth-century art is so fine as the air and gesture of sympathetic majesty with which the Church drew aside to let the Virgin and Saint Francis pass and take the lead — for a time. Both were human ideals too intensely realized to be resisted merely because they were illogical. The Church bowed and was silent.

This does not concern us. What the Church thought or inks is its own affair, and what it chooses to call orthodox is rthodox. We have been trying only to understand what the Virgin and Saint Francis thought, which is matter of fact, not f faith. Saint Francis was even more outspoken than the Virgin. he calmly set herself above dogma, and, with feminine indif-erence to authority, overruled it. He, having asserted in the rongest terms the principle of obedience, paid no further atten-on to dogma, but, without the least reticence, insisted on ractices and ideas that no Church could possibly permit or vow. Toward the end of his life, his physician cauterized his ce for some neuralgic pain:

Et posito ferro in igne pro coctura enda, beatus Franciscus volens con-rtare spiritum suum ne pavesceret, locutus est ad ignem: 'Frater mi, nis, nobilis et utilis inter alias creatu-s, esto mihi curialis in hac hora quia im te dilexi et diligam amore illius qui eavit te. Deprecor etiam creatorem strum qui nos creavit ut ita tuum lorem temperet ut ipsum sustinere leam.' Et oratione finita signavit nem signo crucis.

When the iron was put on the fire for making the cautery, Saint Francis, wishing to encourage himself against fear, spoke thus to the fire: 'My brother, fire, noblest and usefullest of creatures, be gentle to me now, because I have loved and will love you with the love of Him who created you. Our Creator, too, Who created us both, I implore so to temper your heat that I may have strength to bear it.' And having spoken, he signed the fire with the cross.

With him, this was not merely a symbol. Children and saints an believe two contrary things at the same time, but Saint rancis had also a complete faith of his own which satisfied him holly. All nature was God's creature. The sun and fire, air nd water, were neither more nor less brothers and sisters than arrows, wolves, and bandits. Even 'daemones sunt castalli omini nostri'; the devils are wardens of our Lord. If Saint rancis made any exception from his universal law of brother-ood it was that of the schoolmen, but it was never expressed. ven in his passionate outbreak, in the presence of Saint ominic, at the great Chapter of his Order at Sancta Maria de ortiuncula in 1218, he did not go quite to the length of denying ie brotherhood of schoolmen, although he placed them far elow the devils, and yet every word of this address seems to ob with the anguish of his despair at the power of the school nti-Christ:

Quum beatus Franciscus esset in capitulo generali apud Sanctam Mariam de Portiuncula ... et fuerunt ibi quinque millia fratres, quamplures fratres sapientes et scientiati iverunt ad dominum Ostiensem qui erat ibidem, et dixerunt ei: 'Domine, volumus ut suadetis fratri Francisco quod sequatur consilium fratrum sapientium et permittat se interdum duci ab eis.' Et allegabant regulam sancti Benedicti, Augustini et Bernardi qui docent sic et sic vivere ordinate. Quae omnia quum retulisset cardinalis beato Francisco per modum admonitionis, beatus Franciscus, nihil sibi respondens, cepit ipsum per manum et duxit eum ad fratres congregatos in capitulo, et sic locutus est fratribus in fervore et virtute Spiritus sancti:

'Fratres mei, fratres mei, Dominus vocavit me per viam simplicitatis et humilitatis, et hanc viam ostendit mihi in veritate pro me et pro illis qui volunt mihi credere et imitari. Et ideo volo quod non nominetis mihi aliquam regulam neque sancti Benedicti neque sancti Augustini neque sancti Bernardi, neque aliquam viam et formam vivendi praeter illam quae mihi a Domino est ostensa misericorditer et donata. Et dixit mihi Dominus quod volebat me esse unum pauperem et stultum idiotam [magnum fatuum] in hoc mundo et noluit nos ducere per viam aliam quam per istam scientiam. Sed per vestram scientiam et sapientiam Deus vos confundet et ego confido in castallis Domini [idest daemonibus] quod per ipsos puniet vos Deus et adhuc redibitis ad vestrum statum cum vituperio vestro velitis nolitis.'

When Saint Francis was at the Ge
eral Chapter held at Sancta Maria
Portiuncula ... and five thousar
brothers were present, a number
them who were schoolmen went
Cardinal Hugolino who was there, ar
said to him: 'My lord, we want you
persuade Brother Francis to follow th
council of the learned brothers, an
sometimes let himself be guided b
them.' And they suggested the rule
Saint Benedict or Augustine or Bernar
who require their congregations to liv
so and so, by regulation. When th
Cardinal had repeated all this to Sair
Francis by way of counsel, Sair
Francis, making no answer, took hir
by the hand and led him to the brothe
assembled in Chapter, and in th
fervour and virtue of the Holy Ghos
spoke thus to the brothers:

'My brothers, my brothers, God ha
called me by the way of simplicity an
humility, and has shown me in verit
this path for me and those who want t
believe and follow me; so I want yo
to talk of no Rule to me, neither Sair
Benedict nor Saint Augustine nor Sair
Bernard, nor any way or form of Lif
whatever except that which God ha
mercifully pointed out and granted t
me. And God said that he wanted m
to be a pauper [poverello] and an idic
— a great fool — in this world, an
would not lead us by any other path o
science than this. But by your scienc
and syllogisms God will confound you
and I trust in God's warders, the devil
that through them God shall punis
you, and you will yet come back t
your proper station with shame
whether you will or no.'

The narration continues: 'Tunc cardinalis obstupuit valde e
nihil respondit. Et omnes fratres plurimum timuerunt.'

One feels that the reporter has not exaggerated a word; or
the contrary, he softened the scandal, because in his time the

Cardinal had gained his point, and Francis was dead. One an hear Francis beginning with some restraint, and gradually arried away by passion till he lost control of himself and his nguage: '"God told me, with his own words, that he meant ie to be a beggar and a great fool, and would not have us on ny other terms; and as for your science, I trust in God's devils ho will beat you out of it, as you deserve." And the Cardinal as utterly dumbfounded and answered nothing; and all the rothers were scared to death.' The Cardinal Hugolino was great schoolman, and Dominic was then founding the famous rder in which the greatest of all doctors, Albertus Magnus, as about to begin his studies. One can imagine that the ardinal 'obstupuit valde,' and that Dominic felt shaken in his heme of school instruction. For a single instant, in the flash Francis's passion, the whole mass of five thousand monks in state of semi-ecstasy recoiled before the impassable gulf that pened between them and the Church.

No one was to blame — no one ever is to blame — because od wanted contradictory things, and man tried to carry out, he saw them, God's trusts. The schoolmen saw their duty in ie direction; Francis saw his in another; and, apparently, hen both lines had been carried, after such fashion as might e, to their utmost results, and five hundred years had been evoted to the effort, society declared both to be failures. erhaps both may some day be revived, for the two paths seem be the only roads that can exist, if man starts by taking for anted that there is an object to be reached at the end of his urney. The Church, embracing all mankind, had no choice it to march with caution, seeking God by every possible means intellect and study. Francis, acting only for himself, could row caution aside and trust implicitly in God, like the chil-en who went on crusade. The two poles of social and political iilosophy seem necessarily to be organization or anarchy; an's intellect or the forces of nature. Francis saw God in ature, if he did not see nature in God; as the builders of hartres saw the Virgin in their apse. Francis held the simplest id most childlike form of pantheism. He carried to its last

point the mystical union with God, and its necessary consequence of contempt and hatred for human intellectual processes. Even Saint Bernard would have thought his ideas wanting in that 'mesure' which the French mind so much prizes. At the same time we had best try, as innocently as may be, to realize that no final judgment has yet been pronounced, either by the Church or by society or by science, on either or any of these points; and until mankind finally settles to a certainty where it means to go, or whether it means to go anywhere — what its object is, or whether it has an object — Saint Francis may still prove to have been its ultimate expression. In that case, his famous chant — the 'Cantico del Sole' — will be the last word of religion, as it was probably its first. Here it is — too sincere for translation:

CANTICO DEL SOLE

... Laudato sie, misignore, con tucte le tue creature
spetialmente messor lo frate sole
lo quale iorno et allumini noi per loi
et ellu e bellu e radiante cum grande splendore
de te, altissimo, porta significatione.

Laudato si, misignore, per sora luna e le stelle
in celu lai formate clarite et pretiose et belle.
Laudato si, misignore, per frate vento
et per aere et nubilo et sereno et onne tempo
per lo quale a le tue creature dai sustentamento.

Laudato si, misignore, per sor aqua
la quale e multo utile et humile et pretiosa et casta.
Laudato si, misignore, per frate focu
per lo quale enallumini la nocte
ed ello e bello et jocondo et robustoso et forte.

Laudato si, misignore, per sora nostra matre terra
la quale ne sustenta et governa
et produce diversi fructi con coloriti flori et herba.
. . . . . .
Laudato si, misignore, per sora nostra morte corporale
de la quale nullu homo vivente.po skappare
guai acquelli ke morrano ne le peccata mortali....

The verses, if verses they are, have little or nothing in common with the art of Saint Bernard or Adam of Saint-Victor. What

ever art they have, granting that they have any, seems to go back to the cave-dwellers and the age of stone. Compared with the naïveté of the 'Cantico del Sole,' the 'Chanson de Roland' or the 'Iliad' is a triumph of perfect technique. The value is not in the verse. The 'Chant of the Sun' is another 'Pons Seclorum' — or perhaps rather a 'Pons Sanctorum' — over which only children and saints can pass. It is almost a paraphrase of the sermon to the birds. 'Thank you, mi signore, for messor brother sun, in especial, who is your symbol; and for sister moon and the stars; and for brother wind and air and sky; and for sister water; and for brother fire; and for mother earth! We are all yours, mi signore! We are your children; your household; your feudal family! but we never heard of a Church. We are all varying forms of the same ultimate energy; shifting symbols of the same absolute unity; but our only unity, beneath you, is nature, not law! We thank you for no human institutions, even for those established in your name; but, with all our hearts we thank you for sister our mother Earth and its fruits and coloured flowers!'

Francis loved them all — the brothers and sisters — as intensely as a child loves the taste and smell of a peach, and as simply; but behind them remained one sister whom no one loved, and for whom, in his first verses, Francis had rendered no thanks. Only on his death-bed he added the lines of gratitude for 'our sister death,' the long-sought, never-found sister of the schoolmen, who solved all philosophy and merged multiplicity in unity. The solution was at least simple; one must decide for one's self, according to one's personal standards, whether or not it is more sympathetic than that with which we have got lastly to grapple in the works of Saint Thomas Aquinas.

XVI. Saint Thomas Aquinas

LONG before Saint Francis's death, in 1226, the French mystics had exhausted their energies and the siècle had taken new heart. Society could not remain forever balancing between thought and act. A few gifted natures could absorb themselves in the absolute, but the rest lived for the day, and needed shelter and safety. So the Church bent again to its task, and bade the Spaniard Dominic arm new levies with the best weapons of science, and flaunt the name of Aristotle on the Church banners along with that of Saint Augustine. The year 1215, which happened to be the date of Magna Charta and other easily fixed events, like the birth of Saint Louis, may serve to mark the triumph of the schools. The pointed arch revelled at Rheims and the Gothic architects reached perfection at Amiens just as Francis died at Assisi and Thomas was born at Aquino. The Franciscan Order itself was swept with the stream that Francis tried to dam, and the great Franciscan schoolman, Alexander Hales, in 1222, four years before the death of Francis, joined the order and began lecturing as though Francis himself had lived only to teach scholastic philosophy.

The rival Dominican champion, Albertus Magnus, began his career a little later, in 1228. Born of the noble Swabian family of Bollstadt, in 1193, he drifted, like other schoolmen, to Paris, and the Rue Maître Albert, opposite Notre Dame, still records his fame as a teacher there. Thence he passed to a school established by the order at Cologne, where he was lecturing with

great authority in 1243 when the general superior of the order brought up from Italy a young man of the highest promise to be trained as his assistant.

Thomas, the new pupil, was born under the shadow of Monte Cassino in 1226 or 1227. His father, the Count of Aquino, claimed descent from the imperial line of Swabia; his mother, from the Norman princes of Sicily; so that in him the two most energetic strains in Europe met. His social rank was royal, and the order set the highest value on it. He took the vows in 1243, and went north at once to help Albertus at Cologne. In 1245, the order sent Albertus back to Paris, and Thomas with him. There he remained till 1248 when he was ordered to Cologne as assistant lecturer, and only four years afterwards, at twenty-five years old, he was made full professor at Paris. His industry and activity never rested till his death in 1274, not yet fifty years old, when he bequeathed to the Church a mass of manuscript that tourists will never know enough to estimate except by weight. His complete works, repeatedly printed, fill between twenty and thirty quarto volumes. For so famous a doctor, this is almost meagre. Unfortunately his greatest work, the 'Summa Theologiae,' is unfinished — like Beauvais Cathedral.

Perhaps Thomas's success was partly due to his memory which is said to have been phenomenal; for, in an age when cyclopaedias were unknown, a cyclopaedic memory must have counted for half the battle in these scholastic disputes where authority could be met only by authority; but in this case, memory was supported by mind. Outwardly Thomas was heavy and slow in manner, if it is true that his companions called him 'the big dumb ox of Sicily'; and in fashionable or court circles he did not enjoy reputation for acute sense of humour. Saint Louis's household offers a picture not wholly clerical, least of all among the King's brothers and sons; and perhaps the dinner-table was not much more used then than now to abrupt interjections of theology into the talk about hunting and hounds; but however it happened, Thomas one day surprised the company by solemnly announcing — 'I have a

decisive argument against the Manicheans!' No wit or humour could be more to the point — between two saints that were to be — than a decisive argument against enemies of Christ, and one greatly regrets that the rest of the conversation was not reported, unless, indeed, it is somewhere in the twenty-eight quarto volumes; but it probably lacked humour for courtiers.

The twenty-eight quarto volumes must be closed books for us. None but Dominicans have a right to interpret them. No Franciscan — or even Jesuit — understands Saint Thomas exactly or explains him with authority. For summer tourists to handle these intricate problems in a theological spirit would be altogether absurd; but, for us, these great theologians were also architects who undertook to build a Church Intellectual, corresponding bit by bit to the Church Administrative, both expressing — and expressed by — the Church Architectural. Alexander Hales, Albert the Great, Thomas Aquinas, Duns Scotus, and the rest, were artists; and if Saint Thomas happens to stand at their head as type, it is not because we choose him or understand him better than his rivals, but because his order chose him rather than his master Albert, to impose as authority on the Church; and because Pope John XXII canonized him on the ground that his decisions were miracles; and because the Council of Trent placed his 'Summa' among the sacred books on their table; and because Innocent VI said that his doctrine alone was sure; and finally, because Leo XIII very lately made a point of declaring that, on the wings of Saint Thomas's genius, human reason has reached the most sublime height it can probably ever attain.

Although the Franciscans, and, later, the Jesuits, have not always shown as much admiration as the Dominicans for the genius of Saint Thomas, and the mystics have never shown any admiration whatever for the philosophy of the schools, the authority of Leo XIII is final, at least on one point and the only one that concerns us. Saint Thomas is still alive and overshadows as many schools as he ever did; at all events, as many as the Church maintains. He has outlived Descartes and Leibnitz and a dozen other schools of philosophy more or less serious in

heir day. He has mostly outlived Hume, Voltaire, and the nilitant sceptics. His method is typical and classic; his sen-ences, when interpreted by the Church, seem, even to an un-rained mind, intelligible and consistent; his Church Intellec-ual remains practically unchanged, and, like the Cathedral f Beauvais, erect, although the storms of six or seven centuries ave prostrated, over and over again, every other social or olitical or juristic shelter. Compared with it, all modern sys-ems are complex and chaotic, crowded with self-contradic-ions, anomalies, impracticable functions and outworn inheri-ances; but beyond all their practical shortcomings is their frag-nentary character. An economic civilization troubles itself bout the universe much as a hive of honey-bees troubles about he ocean, only as a region to be avoided. The hive of Saint Thomas sheltered God and man, mind and matter, the universe nd the atom, the one and the multiple, within the walls of an armonious home.

Theologians, like architects, were supposed to receive their Church complete in all its lines; they were modern judges who nterpreted the law, but never invented it. Saint Thomas merely elected between disputed opinions, but he allowed himself to vander very far afield, indeed, in search of opinions to dispute. The field embraced all that existed, or might have existed, or ould never exist. The immense structure rested on Aristotle nd Saint Augustine at the last, but as a work of art it stood lone, like Rheims or Amiens Cathedral, as though it had no ntecedents. Then, although, like Rheims, its style was never neant to suit modern housekeeping and is ill-seen by the École des Beaux Arts, it reveals itself in its great mass and in-elligence as a work of extraordinary genius; a system as ad-nirably proportioned as any cathedral and as complete; a uccess not universal either in art or science.

Saint Thomas's architecture, like any other work of art, is est studied by itself as though he created it outright; otherwise tourist would never get beyond its threshold. Beginning with he foundation which is God and God's active presence in His Church, Thomas next built God into the walls and towers of

His Church, in the Trinity and its creation of mind and matte in time and space; then finally he filled the Church by unitin mind and matter in man, or man's soul, giving to humanity free will that rose, like the flèche, to heaven. The foundation – the structure — the congregation — are enough for student of art; his ideas of law, ethics, and politics; his vocabulary, hi syllogisms, his arrangement are, like the drawings of Villard d Honnecourt's sketch-book, curious but not vital. After the elev enth-century Romanesque Church of Saint Michael came th twelfth-century Transition Church of the Virgin, and all merge and ended at last in the thirteenth-century Gothic Cathedra of the Trinity. One wants to see the end.

The foundation of the Christian Church should be — as th simple deist might suppose — always the same, but Sain Thomas knew better. His foundation was Norman, not French it spoke the practical architect who knew the mathematics o his art, and who saw that the foundation laid by Saint Bernard Saint Victor, Saint Francis, the whole mystical, semi-mystical Cartesian, Spinozan foundation, past or future, could not bea the weight of the structure to be put on it. Thomas began by sweeping the ground clear of them. God must be a concrete thing, not a human thought. God must be proved by the senses like any other concrete thing; 'nihil est in intellectu quin prius fuerit in sensu'; even if Aristotle had not affirmed the law, Thomas would have discovered it. He admitted at once that God could not be taken for granted.

The admission, as every boy-student of the Latin Quarter knew, was exceedingly bold and dangerous. The greatest logi-cians commonly shrank from proving unity by multiplicity. Thomas was one of the greatest logicians that ever lived; the question had always been at the bottom of theology; he de-liberately challenged what every one knew to be an extreme peril. If his foundation failed, his Church fell. Many critics have thought that he saw dangers four hundred years ahead. The time came, about 1650–1700, when Descartes, deserting Saint Thomas, started afresh with the idea of God as a concept, and at once found himself charged with a deity that contained

he universe; nor did the Cartesians — until Spinoza made it clear — seem able or willing to see that the Church could not accept this deity because the Church required a God who caused the universe. The two deities destroyed each other. One was passive; the other active. Thomas warned Descartes of a logical quicksand which must necessarily swallow up any Church, and which Spinoza explored to the bottom. Thomas said truly that every true cause must be proved as a cause, not merely as a sequence; otherwise they must end in a universal energy or substance without causality — a source.

Whatever God might be to others, to His Church he could not be a sequence or a source. That point had been admitted by William of Champeaux, and made the division between Christians and infidels. On the other hand, if God must be proved as a true cause in order to warrant the Church or the State in requiring men to worship Him as Creator, the student became the more curious — if a churchman, the more anxious — to be assured that Thomas succeeded in his proof, especially since he did not satisfy Descartes and still less Pascal. That the mystics should be dissatisfied was natural enough, since they were committed to the contrary view, but that Descartes should desert was a serious blow which threw the French Church into consternation from which it never quite recovered.

'I see motion,' said Thomas: 'I infer a motor!' This reasoning, which may be fifty thousand years old, is as strong as ever it was; stronger than some more modern inferences of science; but the average mechanic stated it differently. 'I see motion,' he admitted: 'I infer energy. I see motion everywhere; I infer energy everywhere.' Saint Thomas barred this door to materialism by adding: 'I see motion; I cannot infer an infinite series of motors: I can only infer, somewhere at the end of the series, an intelligent, fixed motor.' The average modern mechanic might not dissent but would certainly hesitate. 'No doubt!' he might say; 'we can conduct our works as well on that as on any other theory, or as we could on no theory at all; but, if you offer it as proof, we can only say that we have not yet reduced all motion to one source or all energies to one law,

much less to one act of creation, although we have tried our best.' The result of some centuries of experiment tended to raise rather than silence doubt, although, even in his own day, Thomas would have been scandalized beyond the resources of his Latin had Saint Bonaventure met him at Saint Louis's dinner-table and complimented him, in the King's hearing, on having proved, beyond all Franciscan cavils, that the Church Intellectual had necessarily but one first cause and creator — himself.

The Church Intellectual, like the Church Architectural, implied not one architect, but myriads, and not one fixed, intelligent architect at the end of the series, but a vanishing vista without a beginning at any definite moment; and if Thomas pressed his argument, the twentieth-century mechanic who should attend his conférences at the Sorbonne would be apt to say so. 'What is the use of trying to argue me into it? Your inference may be sound logic, but is not proof. Actually we know less about it than you did. All we know is the thing we handle, and we cannot handle your fixed, intelligent prime motor. To your old ideas of form we have added what we call force, and we are rather further than ever from reducing the complex to unity. In fact, if you are aiming to convince me, I will tell you flatly that I know only the multiple, and have no use for unity at all.'

In the thirteenth century men did not depend so much as now on actual experiment, but the nominalist said in effect the same thing. Unity to him was a pure concept, and any one who thought it real would believe that a triangle was alive and could walk on its legs. Without proving unity, philosophers saw no way to prove God. They could only fall back on an attempt to prove that the concept of unity proved itself, and this phantasm drove the Cartesians to drop Thomas's argument and assert that 'the mere fact of having within us the idea of a thing more perfect than ourselves, proves the real existence of that thing.' Four hundred years earlier Saint Thomas had replied in advance that Descartes wanted to prove altogether too much, and Spinoza showed mathematically that Saint Thomas

ıd been in the right. The finest religious mind of the time — ıscal — admitted it and gave up the struggle, like the mystics Saint-Victor.

Thus some of the greatest priests and professors of the Church, ıcluding Duns Scotus himself, seemed not wholly satisfied that homas's proof was complete, but most of them admitted that was the safest among possible foundations, and that it showed, architecture, the Norman temper of courage and caution. he Norman was ready to run great risks, but he would rather asp too little than too much; he narrowed the spacing of his iers rather than spread them too wide for safe vaulting. Beveen Norman blood and Breton blood was a singular gap, as enan and every other Breton has delighted to point out. oth Abélard and Descartes were Breton. The Breton seized ıore than he could hold; the Norman took less than he would ave liked.

God, then, is proved. What the schools called form, what ience calls energy, and what the intermediate period called ıe evidence of design, made the foundation of Saint Thomas's athedral. God is an intelligent, fixed prime motor — not a ncept, or proved by concepts; — a concrete fact, proved by ıe senses of sight and touch. On that foundation Thomas built. he walls and vaults of his Church were more complex than ıe foundation; especially the towers were troublesome. Dogma, ıe vital purpose of the Church, required support. The most eighty dogma, the central tower of the Norman cathedral, as the Trinity, and between the Breton solution which was o heavy, and the French solution which was too light, the orman Thomas found a way. Remembering how vehemently ıe French Church, under Saint Bernard, had protected the rinity from all interference whatever, one turns anxiously to e what Thomas said about it; and unless one misunderstands ım — as is very likely, indeed, to be the case, since no one may ven profess to understand the Trinity — Thomas treated it as mply as he could. 'God, being conscious of Himself, thinks imself; his thought is Himself, his own reflection in the Verb - the so-called Son.' 'Est in Deo intelligente seipsum Verbum

Dei quasi Deus intellectus.' The idea was not new, and as idea went it was hardly a mystery; but the next step was naïf: — God as a double consciousness, loves Himself, and realizes Himself in the Holy Ghost. The third side of the triangle is love or grace.

Many theologians have found fault with this treatment of the subject, which seemed open to every objection that had been made to Abélard, Gilbert de la Porée, or a thousand other logicians. They commonly asked why Thomas stopped the Deity's self-realizations at love, or inside the triangle, since these realizations were real, not symbolic, and the square was at least as real as any other combination of line. Thomas replied that knowledge and will — the Verb and the Holy Ghost — were alone essential. The reply did not suit every one, even among doctors, but since Saint Thomas rested on this simple assertion, it is no concern of ours to argue the theology. Only as art, one can afford to say that the form is more architectural than religious; it would surely have been suspicious to Saint Bernard. Mystery there was none, and logic little. The concept of the Holy Ghost was childlike; for a pupil of Aristotle it was inadmissible, since it led to nothing and helped no step toward the universe.

Admitting, if necessary, the criticism, Thomas need not admit the blame, if blame there were. Every theologian was obliged to stop the pursuit of logic by force, before it dragged him into paganism and pantheism. Theology begins with the universal — God — who must be a reality, not a symbol; but it is forced to limit the process of God's realizations somewhere, or the priest soon becomes a worshipper of God in sticks and stones. Theologists had commonly chosen, from time immemorial, to stop at the Trinity; within the triangle they were wholly realist, but they could not admit that God went on to realize Himself in the square and circle, or that the third member of the Trinity contained multiplicity, because the Trinity was a restless weight on the Church piers, which, like the central tower, constantly tended to fall, and needed to be lightened. Thomas gave it the lightest form possible, and there fixed it.

Then came his great tour-de-force, the vaulting of his broad ıve; and, if ignorance is allowed an opinion, even a lost soul ay admire the grand simplicity of Thomas's scheme. He ept away the horizontal lines altogether, leaving them barely a part of decoration. The whole weight of his arches fell, in the latest Gothic, where the eye sees nothing to break e sheer spring of the nervures, from the rosette on the key- ne a hundred feet above down to the church floor. In homas's creation nothing intervened between God and his orld; secondary causes became ornaments; only two forces, od and man, stood in the Church.

The chapter of Creation is so serious, and Thomas's crea- n, like every other, is open to so much debate, that no student n allow another to explain it; and certainly no man what- er, either saint or sceptic, can ever yet have understood Crea- n aright unless divinely inspired; but whatever Thomas's eory was as he meant it, he seems to be understood as holding at every created individual — animal, vegetable, or mineral - was a special, divine act. Whatever has form is created, and hatever is created takes form directly from the will of God, hich is also his act. The intermediate universals — the sec- ndary causes — vanish as causes; they are, at most, sequences relations; all merge in one universal act of will; instantaneous, finite, eternal.

Saint Thomas saw God, much as Milton saw him, resplendent

> That glorious form, that light unsufferable,
> And that far-beaming blaze of Majesty,
> Wherewith he wont, at Heaven's high council-table,
> To sit the midst of Trinal Unity;

cept that, in Thomas's thought, the council-table was a ork-table, because God did not take counsel; He was an act. he Trinity was an infinite possibility of will; nothing within but

> The baby image of the giant mass
> Of things to come at large.

either time nor space, neither matter nor mind, not even force isted, nor could any intelligence conceive how, even though

they should exist, they could be united in the lowest association
A crystal was as miraculous as Socrates. Only abstract force
or what the schoolmen called form, existed undeveloped from
eternity, like the abstract line in mathematics.

Fifty or a hundred years before Saint Thomas settled the
Church dogma, a monk of Citeaux or some other abbey,
certain Alain of Lille, had written a Latin poem, as abstruse
an allegory as the best, which had the merit of painting the
scene of man's creation as far as concerned the mechanical
process much as Thomas seems to have seen it. M. Hauréau
has printed an extract (vol. I, p. 352). Alain conceded to the
weakness of human thought, that God was working in time and
space, or rather on His throne in heaven, when nature, pro-
posing to create a new and improved man, sent Reason and
Prudence up to ask Him for a soul to fit the new body. Having
passed through various adventures and much scholastic in-
struction, the messenger Prudence arrived, after having dropped
her dangerous friend Reason by the way. The request was
respectfully presented to God, and favourably received. God
promised the soul, and at once sent His servant Noys —
Thought — to the storehouse of ideas, to choose it:

Ipse Deus rem prosequitur, producit in actum	God Himself pursues the task, and sees in act
Quod pepigit. Vocat ergo Noym quae praepaert illi	What He promised. So He calls Noys to seek
Numinis exemplar, humanae mentis Idaeam,	A copy of His will, Idea of the human mind,
Ad cujus formam formetur spiritus omni	To whose form the spirit should be shaped,
Munere virtutum dives, qui, nube caducae	Rich in every virtue, which, veiled in garb
Carnis odumbratus veletur corporis umbra.	Of frail flesh, is to be hidden in a shade of body,
Tunc Noys ad regis praeceptum singula rerum	Then Noys, at the King's order, turning one by one
Vestigans exempla, novam perquirit Idaeam.	Each sample, seeks the new Idea.
Inter tot species, speciem vix invenit illam	Among so many images she hardly finds that
Quam petit; offertur tandem quaesita petenti.	Which she seeks; at last the sought one appears.

Hanc formam Noys ipsa Deo praesentat ut ejus	This form Noys herself brings to God for Him
Formet ad exemplar animam. Tunc ille sigillum	To form a soul to its pattern. He takes the seal,
Sumit, ad ipsius formae vestigia formam	And gives form to the soul after the model
Dans animae, vultum qualem deposcit Idaea	Of the form itself, stamping on the sample
Imprimit exemplo; totas usurpat imago	The figure such as the Idea requires. The seal
Exemplaris opes, loquiturque figura sigillum.	Covers the whole field, and the impression expresses the stamp.

The translation is probably full of mistakes; indeed, one is permitted to doubt whether Alain himself accurately understood the process; but in substance he meant that God contained a storehouse of ideas, and stamped each creation with one of these forms. The poets used a variety of figures to help out their logic, but that of the potter and his pot was one of the most common. Omar Khayyám was using it at the same time with Alain of Lille, but with a difference: for his pot seems to have been matter alone, and his soul was the wine it received from God; while Alain's soul seems to have been the form and not the contents of the pot.

The figure matters little. In any case God's act was the union of mind with matter by the same act or will which created both. No intermediate cause or condition intervened; no secondary influence had anything whatever to do with the result. Time had nothing to do with it. Every individual that has existed or shall exist was created by the same instantaneous act, for all time. 'When the question regards the universal agent who produces beings *and* time, we cannot consider him as acting *now* and *before*, according to the succession of time.' God emanated time, force, matter, mind, as He might emanate gravitation, not as a part of His substance but as an energy of His will, and maintains them in their activity by the same act, not by a new one. Every individual is a part of the direct act; not a secondary outcome. The soul has no father or mother. Of all errors one of the most serious is to suppose that the soul descends by generation. 'Having life and action of its own, it

subsists without the body; . . . it must therefore be produced directly, and since it is not a material substance, it cannot be produced by way of generation; it must necessarily be created by God. Consequently to suppose that the intelligence [or intelligent soul] is the effect of generation is to suppose that it is not a pure and simple substance, but corruptible like the body. It is therefore heresy to say that this soul is transmitted by generation.' What is true of the soul should be true of all other form, since no form is a material substance. The utmost possible relation between any two individuals is that God may have used the same stamp or mould for a series of creations, and especially for the less spiritual: 'God is the first model for all things. One may also say that, among His creatures some serve as types or models for others because there are some which are made in the image of others'; but generation means sequence, not cause. The only true cause is God. Creation is His sole act, in which no second cause can share. 'Creation is more perfect and loftier than generation, because it aims at producing the whole substance of the being, though it starts from absolute nothing.'

Thomas Aquinas, when he pleased, was singularly lucid, and on this point he was particularly positive. The architect insisted on the controlling idea of his structure. The Church was God, and its lines excluded interference. God and the Church embraced all the converging lines of the universe, and the universe showed none but lines that converged. Between God and man, nothing whatever intervened. The individual was a compound of form, or soul, and matter; but both were always created together, by the same act, out of nothing. 'Simpliciter fatendum est animas simul cum corporibus creari et infundi.' It must be distinctly understood that souls were not created before bodies, but that they were created at the same time as the bodies they animate. Nothing whatever preceded this union of two substances which did not exist: 'Creatio est productio alicujus rei secundum suam totam substantiam, nullo praesupposito, quod sit vel increatum vel ab aliquo creatum.' Language can go no further in exclusion of every possible

receding, secondary, or subsequent cause, 'Productio universalis entis a Deo non est motus nec mutatio, sed est quaedam emplex emanatio.' The whole universe is, so to speak, a simple nanation from God.

The famous junction, then, is made! — that celebrated fusion the universal with the individual, of unity with multiplicity, God and nature, which had broken the neck of every philoophy ever invented; which had ruined William of Champeaux nd was to ruin Descartes; this evolution of the finite from the finite was accomplished. The supreme triumph was as easily ffected by Thomas Aquinas as it was to be again effected, four undred years later, by Spinoza. He had merely to assert the ct: 'It is so! it cannot be otherwise!' 'For the thousandth and undred-thousandth time; — what is the use of discussing this rime motor, this Spinozan substance, any longer? We know is there!' that — as Professor Haeckel very justly repeats for e millionth time — is enough.

One point, however, remained undetermined. The Prime lotor and His action stood fixed, and no one wished to disturb im; but this was not the point that had disturbed William of hampeaux. Abélard's question still remained to be answered. ow did Socrates differ from Plato — Judas from John — homas Aquinas from Professor Haeckel? Were they, in fact vo, or one? What made an individual? What was God's ntimetre measure? The abstract form or soul which existed a possibility in God, from all time — was it one or many? o the Church, this issue overshadowed all else, for, if humanity as one and not multiple, the Church, which dealt only with dividuals, was lost. To the schools, also, the issue was vital, r, if the soul or form was already multiple from the first, nity was lost; the ultimate substance and prime motor itself ecame multiple; the whole issue was reopened.

To the consternation of the Church, and even of his own rder, Thomas, following closely his masters, Albert and ristotle, asserted that the soul was measured by matter. Division occurs in substances in ratio of quantity, as Aristotle ys in his "Physics." And so dimensional quantity is a principle

of individuation.' The soul is a fluid absorbed by matter i proportion to the absorptive power of the matter. The soul : an energy existing in matter proportionately to the dimensiona quantity of the matter. The soul is a wine, greater or less i quantity according to the size of the cup. In our report of th great debate of 1110, between Champeaux and Abélard, w have seen William persistently tempting Abélard to fall int this admission that matter made the man; — that the universa equilateral triangle became an individual if it were shaped i metal, the matter giving it reality which mere form could no give; and Abélard evading the issue as though his life depende on it. In fact, had Abélard dared to follow Aristotle into wha looked like an admission that Socrates and Plato were identica as form and differed only in weight, his life might have beer the forfeit. How Saint Thomas escaped is a question closely connected with the same inquiry about Saint Francis of Assisi A Church which embraced, with equal sympathy, and withir a hundred years, the Virgin, Saint Bernard, William of Champeaux and the School of Saint-Victor, Peter the Venerable, Saint Francis of Assisi, Saint Dominic, Saint Thomas Aquinas, and Saint Bonaventure, was more liberal than any modern State can afford to be. Radical contradictions the State may perhaps tolerate, though hardly, but never embrace or profess. Such elasticity long ago vanished from human thought.

Yet only Dominicans believe that the Church adopted this law of individualization, or even assented to it. If M. Jourdain is right, Thomas was quickly obliged to give it another form: that, though all souls belonged to the same species, they differed in their aptitudes for uniting with particular bodies. 'This soul is commensurate with this body, and not with that other one.' The idea is double; for either the souls individualized themselves, and Thomas abandoned his doctrine of their instantaneous creation, with the bodies, out of nothing; or God individualized them in the act of creation, and matter had nothing to do with it. The difficulty is no concern of ours, but the great scholars who took upon themselves to explain it made it worse, until at last one gathers only that Saint Thomas held

one of three views: either the soul of humanity was individualized by God, or it individualized itself, or it was divided by ratio of quantity, that is, by matter. This amounts to saying that one knows nothing about it, which we knew before and may admit with calmness; but Thomas Aquinas was not so happily placed, between the Church and the schools. Humanity had a form common to itself, which made it what it was. By some means this form was associated with matter; in fact, matter was only known as associated with form. If, then, God, by an instantaneous act, created matter and gave it form according to the dimensions of the matter, innocent ignorance might infer that there was, in the act of God, one world-soul and one world-matter, which He united in different proportions to make men and things. Such a doctrine was fatal to the Church. No greater heresy could be charged against the worst Arab or Jew, and Thomas was so well aware of his danger that he recoiled from it with a vehemence not at all in keeping with his supposed phlegm. With feverish eagerness to get clear of such companions, he denied and denounced, in all companies, in season and out of season, the idea that intellect was one and the same for all men, differing only with the quantity of matter it accompanied. He challenged the adherent of such a doctrine to battle; 'let him take the pen if he dares!' No one dared, seeing that even Jews enjoyed a share of common sense and had seen some of their friends burn at the stake not very long before for such opinions, not even openly maintained; while uneducated people, who are perhaps incapable of receiving intellect at all, but for whose instruction and salvation the great work of Saint Thomas and his scholars must chiefly exist, cannot do battle because they cannot understand Thomas's doctrine of matter and form which to them seems frank pantheism.

So it appeared to Duns Scotus also, if one may assert in the Doctor Subtilis any opinion without qualification. Duns began his career only about 1300, after Thomas's death, and stands, therefore, beyond our horizon; but he is still the pride of the Franciscan Order and stands second in authority to the great Dominican alone. In denying Thomas's doctrine that matter

individualizes mind, Duns laid himself open to the worse charge of investing matter with a certain embryonic, independent, shadowy soul of its own. Scot's system, compared with that of Thomas, tended toward liberty. Scot held that the excess of power in Thomas's prime motor neutralized the power of his secondary causes, so that these appeared altogether superfluous. This is a point that ought to be left to the Church to decide, but there can be no harm in quoting, on the other hand, the authority of some of Scot's critics within the Church, who have thought that his doctrine tended to deify matter and to keep open the road to Spinoza. Narrow and dangerous was the border-line always between pantheism and materialism, and the chief interest of the schools was in finding fault with each other's paths.

The opinions in themselves need not disturb us, although the question is as open to dispute as ever it was and perhaps as much disputed; but the turn of Thomas's mind is worth study. A century or two later, his passion to be reasonable, scientific, architectural would have brought him within range of the Inquisition. Francis of Assisi was not more archaic and cave-dweller than Thomas of Aquino was modern and scientific. In his effort to be logical he forced his Deity to be as logical as himself, which hardly suited Omnipotence. He hewed the Church dogmas into shape as though they were rough stones. About no dogma could mankind feel interest more acute than about that of immortality, which seemed to be the single point vitally necessary for any Church to prove and define as clearly as light itself. Thomas trimmed down the soul to half its legitimate claims as an immortal being by insisting that God created it from nothing in the same act or will by which He created the body and united the two in time and space. The soul existed as form for the body, and had no previous existence. Logic seemed to require that when the body died and dissolved, after the union which had lasted, at most, only an instant or two of eternity, the soul, which fitted that body and no other, should dissolve with it. In that case the Church dissolved, too, since it had no reason for existence except the soul. Thomas met the

difficulty by suggesting that the body's form might take permanence from the matter to which it gave form. That matter should individualize mind was itself a violent wrench of logic, but that it should also give permanence — the one quality it did not possess — to this individual mind seemed to many learned doctors a scandal. Perhaps Thomas meant to leave the responsibility on the Church, where it belonged as a matter not of logic but of revealed truth. At all events, this treatment of mind and matter brought him into trouble which few modern logicians would suspect.

The human soul having become a person by contact with matter, and having gained eternal personality by the momentary union, was finished, and remains to this day for practical purposes unchanged; but the angels and devils, a world of realities then more real than man, were never united with matter, and therefore could not be persons. Thomas admitted and insisted that the angels, being immaterial — neither clothed in matter, nor stamped on it, nor mixed with it — were universals; that is, each was a species in himself, a class, or perhaps what would be now called an energy, with no other individuality than he gave himself.

The idea seems to modern science reasonable enough. Science has to deal, for example, with scores of chemical energies which it knows little about except that they always seem to be constant to the same conditions; but every one knows that in the particular relation of mind to matter the battle is as furious as ever. The soul has always refused to live in peace with the body. The angels, too, were always in rebellion. They insisted on personality, and the devils even more obstinately than the angels. The dispute was — and is — far from trifling. Mind would rather ignore matter altogether. In the thirteenth century mind did, indeed, admit that matter was something — which it quite refuses to admit in the twentieth — but treated it as a nuisance to be abated. To the pure in spirit one argued in vain that spirit must compromise; that nature compromised; that God compromised; that man himself was nothing but a somewhat clumsy compromise. No argument served. Mind

insisted on absolute despotism. Schoolmen as well as mystics would not believe that matter was what it seemed — if, indeed, it existed; — unsubstantial, shifty, shadowy; changing with incredible swiftness into dust, gas, flame; vanishing in mysterious lines of force into space beyond hope of recovery; whirled about in eternity and infinity by that mind, form, energy, or thought which guides and rules and tyrannizes and is the universe. The Church wanted to be pure spirit; she regarded matter with antipathy as something foul, to be held at arms' length lest it should stain and corrupt the soul; the most she would willingly admit was that mind and matter might travel side by side, like a double-headed comet, on parallel lines that never met, with a pre-established harmony that existed only in the prime motor.

Thomas and his master Albert were almost alone in imposing on the Church the compromise so necessary for its equilibrium. The balance of matter against mind was the same necessity in the Church Intellectual as the balance of thrusts in the arch of the Gothic cathedral. Nowhere did Thomas show his architectural obstinacy quite so plainly as in thus taking matter under his protection. Nothing would induce him to compromise with the angels. He insisted on keeping man wholly apart, as a complex of energies in which matter shared equally with mind. The Church must rest firmly on both. The angels differed from other beings below them precisely because they were immaterial and impersonal. Such rigid logic outraged the spiritual Church. Perhaps Thomas's sudden death in 1274 alone saved him from the fate of Abélard, but it did not save his doctrine. Two years afterwards, in 1276, the French and English churches combined to condemn it. Étienne Tempier, Bishop of Paris, presided over the French Synod; Robert Kilwardeby, of the Dominican Order, Archbishop of Canterbury, presided over the Council at Oxford. The synods were composed of schoolmen as well as churchmen, and seem to have been the result of a serious struggle for power between the Dominican and Franciscan Orders. Apparently the Church compromised between them by condemning the errors of both. Some of these errors, springing from Alexander Hales and his

Franciscan schools, were in effect the foundation of another Church. Some were expressly charged against Brother Thomas. 'Contra fratrem Thomam' the councils forbade teaching that — 'quia intelligentiae non habent materiam, Deus non potest plures ejusdem speciei facere; et quod materia non est in angelis'; further, the councils struck at the vital centre of Thomas's system — 'quod Deus non potest individua multiplicare sub una specie sine materia'; and again in its broadest form — 'quod formae non accipiunt divisionem nisi secundam materiam.' These condemnations made a great stir. Old Albertus Magnus, who was the real victim of attack, fought for himself and for Thomas. After a long and earnest effort, the Thomists rooted out opposition in the order, and carried their campaign to Rome. After fifty years of struggle, by use of every method known in Church politics, the Dominican Order, in 1323, caused John XXII to canonize Thomas and in effect affirm his doctrine.

The story shows how modern, how heterodox, how material, how altogether new and revolutionary the system of Saint Thomas seemed at first even in the schools; but that was the affair of the Church and a matter of pure theology. We study only his art. Step by step, stone by stone, we see him build his church-building like a stonemason, 'with the care that the twelfth-century architects put into' their work, as Viollet-le-Duc saw some similar architect at Rouen, building the tower of Saint-Romain: 'He has thrown over his work the grace and finesse, the study of detail, the sobriety in projections, the perfect harmony,' which belongs to his school, and yet he was rigidly structural and Norman. The foundation showed it; the elevation, which is God, developed it; the vaulting, with its balance of thrusts in mind and matter, proved it; but he had still the hardest task in art, to model man.

The cathedral, then, is built, and God is built into it, but, thus far, God is there alone, filling it all, and maintains the equilibrium by balancing created matter separately against created mind. The proportions of the building are superb; nothing so lofty, so large in treatment, so true in scale, so elo-

quent of multiplicity in unity, has ever been conceived elsewhere; but it was the virtue or the fault of superb structures like Bourges and Amiens and the Church universal that they seemed to need man more than man needed them; they were made for crowds, for thousands and tens of thousands of human beings; for the whole human race, on its knees, hungry for pardon and love. Chartres needed no crowd, for it was meant as a palace of the Virgin, and the Virgin filled it wholly; but the Trinity made their church for no other purpose than to accommodate man, and made man for no other purpose than to fill their church; if man failed to fill it, the church and the Trinity seemed equally failures. Empty, Bourges and Beauvais are cold; hardly as religious as a wayside cross; and yet, even empty, they are perhaps more religious than when filled with cattle and machines. Saint Thomas needed to fill his Church with real men, and although he had created his own God for that special purpose, the task was, as every boy knew by heart, the most difficult that Omnipotence had dealt with.

God, as Descartes justly said, we know! but what is man? The schools answered: Man is a rational animal! So was apparently a dog, or a bee, or a beaver, none of which seemed to need churches. Modern science, with infinite effort, has discovered and announced that man is a bewildering complex of energies, which helps little to explain his relations with the ultimate substance or energy or prime motor whose existence both science and schoolmen admit; which science studies in laboratories and religion worships in churches. The man whom God created to fill his Church, must be an energy independent of God; otherwise God filled his own Church with his own energy. Thus far, the God of Saint Thomas was alone in His Church. The beings He had created out of nothing — Omar's pipkins of clay and shape — stood against the walls, waiting to receive the wine of life, a life of their own. Of that life, energy, will, or wine — whatever the poets or professors called it — God was the only cause, as He was also the immediate cause, and support. Thomas was emphatic on that point. God is the cause of energy as the sun is the cause of colour: 'prout sol dicitur causa mani-

estationis coloris.' He not only gives forms to his pipkins, or nergies to his agents, but He also maintains those forms in being: 'dat formas creaturis agentibus et eas tenet in esse.' He acts directly, not through secondary causes, on everything and every one: 'Deus in omnibus intime operatur.' If, for an instant, God's action, which is also His will, were to stop, the universe would not merely fall to pieces, but would vanish, and must then be created anew from nothing: 'Quia non habet radicem in aere, statim cessat lumen, cessante actione solis. Sic autem se habet omnis creatura ad Deum sicut aer ad solem illuminantem.' God radiates energy as the sun radiates light, and 'the whole fabric of nature would return to nothing' if that radiation ceased even for an instant. Everything is created by one instantaneous, eternal, universal act of will, and by the same act is maintained in being.

Where, then — in what mysterious cave outside of creation — could man, and his free will, and his private world of responsibilities and duties, lie hidden? Unless man was a free agent in a world of his own beyond constraint, the Church was a fraud, and it helped little to add that the State was another. If God was the sole and immediate cause and support of everything in His creation, God was also the cause of its defects, and could not — being Justice and Goodness in essence — hold man responsible for His own omissions. Still less could the State or Church do it in His name.

Whatever truth lies in the charge that the schools discussed futile questions by faulty methods, one cannot decently deny that in this case the question was practical and the method vital. Theist or atheist, monist or anarchist must all admit that society and science are equally interested with theology in deciding whether the universe is one or many, a harmony or a discord. The Church and State asserted that it was a harmony, and that they were its representatives. They say so still. Their claim led to singular but unavoidable conclusions, with which society has struggled for seven hundred years, and is still struggling.

Freedom could not exist in nature, or even in God, after the single, unalterable act or will which created. The only possible

free will was that of God before the act. Abélard with his rigid logic averred that God had no freedom; being Himself whatever is most perfect, He produced necessarily the most perfect possible world. Nothing seemed more logical, but if God acted necessarily, His world must also be of necessity the only possible product of His act, and the Church became an impertinence, since man proved only fatuity by attempting to interfere. Thomas dared not disturb the foundations of the Church, and therefore began by laying down the law that God — previous to His act — could choose, and had chosen, whatever scheme of creation He pleased, and that the harmony of the actual scheme proved His perfections. Thus he saved God's free will.

This philosophical apse would have closed the lines and finished the plan of his church-choir had the universe not shown some divergencies or discords needing to be explained. The student of the Latin Quarter was then harder to convince than now that God was Infinite Love and His world a perfect harmony, when perfect love and harmony showed them, even in the Latin Quarter, and still more in revealed truth, a picture of suffering, sorrow, and death; plague, pestilence, and famine; inundations, droughts, and frosts; catastrophes world-wide and accidents in corners; cruelty, perversity, stupidity, uncertainty, insanity; virtue begetting vice; vice working for good; happiness without sense, selfishness without gain, misery without cause, and horrors undefined. The students in public dared not ask, as Voltaire did, 'avec son hideux sourire,' whether the Lisbon earthquake was the final proof of God's infinite goodness, but in private they used the *argumentum ad personam divinam* freely enough, and when the Church told them that evil did not exist, the ribalds laughed.

Saint Augustine certainly tempted Satan when he fastened the Church to this doctrine that evil is only the privation of good, an *amissio boni*; and that good alone exists. The point was infinitely troublesome. Good was order, law, unity. Evil was disorder, anarchy, multiplicity. Which was truth? The Church had committed itself to the dogma that order and unity were the ultimate truth, and that the anarchist should be burned.

ne could do nothing else, and society supported her — still pports her; yet the Church, who was wiser than the State, id always seen that Saint Augustine dealt with only half the estion. She knew that evil might be an excess of good as well absence of it; that good leads to evil, evil to good; and that, as ascal says, 'three degrees of polar elevation upset all juris-rudence; a meridian decides truth; fundamental laws change; ghts have epochs. Pleasing Justice! bounded by a river or mountain! truths on this side the Pyrences! errors beyond!' homas conceded that God Himself, with the best intentions, ight be the source of evil, and pleaded only that his action ight in the end work benefits. He could offer no proof of it, ut he could assume as probable a plan of good which became ne more perfect for the very reason that it allowed great berty in detail.

One hardly feels Saint Thomas here in all his force. He offers ggestion rather than proof; — apology — the weaker because f obvious effort to apologize — rather than defence, for Infinite oodness, Justice, and Power; scoffers might add that he in-ented a new proof *ab defectu*, or argument for proving the perfec-on of a machine by the number of its imperfections; but at all vents, society has never done better by way of proving its right enforce morals or unity of opinion. Unless it asserts law, it an only assert force. Rigid theology went much further. In od's providence, man was as nothing. With a proper sense of uty, every solar system should be content to suffer, if thereby ne efficiency of the Milky Way were improved. Such theology nocked Saint Thomas, who never wholly abandoned man in rder to exalt God. He persistently brought God and man gether, and if he erred, the Church rightly pardons him ecause he erred on the human side. Whenever the path lay rough the valley of despair he called God to his aid, as though e felt the moral obligation of the Creator to help His creation. At best the vision of God, sitting forever at His work-table, illing the existence of mankind exactly as it is, while conscious at, among these myriad arbitrary creations of His will, hardly ne in a million could escape temporary misery or eternal

damnation, was not the best possible background for a Church as the Virgin and the Saviour frankly admitted by taking the foreground; but the Church was not responsible for it. Mankind could not admit an anarchical — a dual or a multiple — universe. The world was there, staring them in the face, with all its chaotic conditions, and society insisted on its unity in self-defence. Society still insists on treating it as unity, though no longer affecting logic. Society insists on its free will, although free will has never been explained to the satisfaction of any but those who much wish to be satisfied, and although the words in any common sense implied not unity but duality in creation. The Church had nothing to do with inventing this riddle — the oldest that fretted mankind. Apart from all theological interferences — fall of Adam or fault of Eve, Atonement, Justification, or Redemption — either the universe was one, or it was two, or it was many; either energy was one, seen only in powers of itself, or it was several; either God was harmony, or He was discord. With practical unanimity, mankind rejected the dual or multiple scheme; it insisted on unity. Thomas took the question as it was given him. The unity was full of defects; he did not deny them; but he claimed that they might be incidents, and that the admitted unity might even prove their beneficence. Granting this enormous concession, he still needed a means of bringing into the system one element which vehemently refused to be brought: that is, Man himself, who insisted that the universe was a unit, but that he was a universe; that energy was one, but that he was another energy; that God was omnipotent, but that man was free. The contradiction had always existed, exists still, and always must exist, unless man either admits that he is a machine, or agrees that anarchy and chaos are the habit of nature, and law and order its accident. The agreement may become possible, but it was not possible in the thirteenth century nor is it now. Saint Thomas's settlement could not be a simple one or final, except for practical use, but it served, and it holds good still.

No one ever seriously affirmed the literal freedom of will. Absolute liberty is absence of restraint; responsibility is re-

raint; therefore, the ideally free individual is responsible only
) himself. This principle is the philosophical foundation of
narchism, and, for anything that science has yet proved, may
e the philosophical foundation of the universe; but it is fatal
) all society and is especially hostile to the State. Perhaps the
Church of the thirteenth century might have found a way to use
ven this principle for a good purpose; certainly, the influence
f Saint Bernard was sufficiently unsocial and that of Saint
rancis was sufficiently unselfish to conciliate even anarchists
f the militant class; but Saint Thomas was working for the
Church and the State, not for the salvation of souls, and his chief
bject was to repress anarchy. The theory of absolute free will
ever entered his mind, more than the theory of material free
ill would enter the mind of an architect. The Church gave
im no warrant for discussing the subject in such a sense. In
act, the Church never admitted free will, or used the word when
could be avoided. In Latin, the term used was 'liberum
rbitrium' — free choice — and in French to this day it re-
ains in strictness 'libre arbitre' still. From Saint Augustine
ownwards the Church was never so unscientific as to admit of
berty beyond the faculty of choosing between paths, some
eading through the Church and some not, but all leading to
he next world; as a criminal might be allowed the liberty of
hoosing between the guillotine and the gallows, without
nfringing on the supremacy of the judge.

Thomas started from that point, already far from theoretic
reedom. 'We are masters of our acts,' he began, 'in the sense
hat we can choose such and such a thing; now, we have not to
hoose our end, but the means that relate to it, as Aristotle
ays.' Unfortunately, even this trenchant amputation of man's
ree energies would not accord with fact or with logic. Ex-
erience proved that man's power of choice in action was very
ar from absolute, and logic seemed to require that every choice
hould have some predetermining cause which decided the will
) act. Science affirmed that choice was not free — could not
e free — without abandoning the unity of force and the founda-
ion of law. Society insisted that its choice must be left free,

whatever became of science or unity. Saint Thomas was re quired to illustrate the theory of 'liberum arbitrium' by choosin a path through these difficulties, where path there was obviousl none.

Thomas's method of treating this problem was sure to be a scientific as the vaulting of a Gothic arch. Indeed, one follow it most easily by translating his school-vocabulary into moder technical terms. With very slight straining of equivalents Thomas might now be written thus:

By the term God, is meant a prime motor which supplies al energy to the universe, and acts directly on man as well as or all other creatures, moving him as a mechanical motor migh do; but man, being specially provided with an organism mor complex than the organisms of other creatures, enjoys an ex ceptional capacity for reflex action — a power of reflection — which enables him within certain limits to choose betwee paths; and this singular capacity is called free choice or fre will. Of course, the reflection is not choice, and though a man' mind reflected as perfectly as the facets of a lighthouse lantern it would never reach a choice without an energy which impel it to act.

Now let us read Saint Thomas:

> Some kind of an agent is required to determine one's choice that agent is reflection. Man reflects, then, in order to learn wha choice to make between the two acts which offer themselves. Bu reflection is, in its turn, a faculty of doing opposite things, for w can reflect or not reflect; and we are no further forward tha before. One cannot carry back this process infinitely, for in tha case one would never decide. The fixed point is not in man since we meet in him, as a being apart by himself, only the alterna tive faculties; we must, therefore, recur to the intervention of a exterior agent who shall impress on our will a movement capabl of putting an end to its hesitations: That exterior agent is nothin else than God!

The scheme seems to differ little, and unwillingly, from a system of dynamics as modern as the dynamo. Even in the prime motor, from the moment of action, freedom of wil

anished. Creation was not successive; it was one instantaneous hought and act, identical with the will, and was complete and inchangeable from end to end, including time as one of its unctions. Thomas was as clear as possible on that point: Supposing God wills anything in effect; He cannot will not o will it, because His will cannot change.' He wills that some hings shall be contingent and others necessary, but He wills in he same act that the contingency shall be necessary. 'They are contingent because God has willed them to be so, and with this object has subjected them to causes which are so.' In the same way He wills that His creation shall develop itself in time and space and sequence, but He creates these conditions as well as the events. He creates the whole, in one act, complete, unchangeable, and it is then unfolded like a rolling panorama, with its predetermined contingencies.

Man's free choice — liberum arbitrium — falls easily into place as a predetermined contingency. God is the first cause, and acts in all secondary causes directly; but while He acts mechanically on the rest of creation — as far as is known — He acts freely at one point, and this free action remains free as far as it extends on that line. Man's freedom derives from this source, but it is simply apparent, as far as he is a cause; it is a reflex action determined by a new agency of the first cause.

However abstruse these ideas may once have sounded, they are far from seeming difficult in comparison with modern theories of energy. Indeed, measured by that standard, the only striking feature of Saint Thomas's motor is its simplicity. Thomas's prime motor was very powerful, and its lines of energy were infinite. Among these infinite lines, a certain group ran to the human race, and, as long as the conduction was perfect, each man acted mechanically. In cases where the current, for any reason, was for a moment checked — that is to say, produced the effect of hesitation or reflection in the mind — the current accumulated until it acquired power to leap the obstacle. As Saint Thomas expressed it, the Prime Motor, Who was nothing else than God, intervened to decide the channel of the current. The only difference between man and a vegetable

was the reflex action of the complicated mirror which was called mind, and the mark of mind was reflective absorption or choice. The apparent freedom was an illusion arising from the extreme delicacy of the machine, but the motive power was in fact the same — that of God.

This exclusion of what men commonly called freedom was carried still further in the process of explaining dogma. Supposing the conduction to be insufficient for a given purpose; a purpose which shall require perfect conduction? Under ordinary circumstances, in ninety-nine cases out of a hundred, the conductor will be burned out, so to speak; condemned, and thrown away. This is the case with most human beings. Yet there are cases where the conductor is capable of receiving an increase of energy from the prime motor, which enables it to attain the object aimed at. In dogma, this store of reserved energy is technically called Grace. In the strict, theological sense of the word, as it is used by Saint Thomas, the exact, literal meaning of Grace is 'a motion which the Prime Motor, as a supernatural cause, produces in the soul, perfecting free will.' It is a reserved energy, which comes to aid and reinforce the normal energy of the battery.

To religious minds this scientific inversion of solemn truths seems, and is, sacrilege; but Thomas's numerous critics in the Church have always brought precisely this charge against his doctrine, and are doing so still. They insist that he has reduced God to a mechanism and man to a passive conductor of force. He has left, they say, nothing but God in the universe. The terrible word which annihilates all other philosophical systems against which it is hurled, has been hurled freely against his for six hundred years and more, without visibly affecting the Church; and yet its propriety seems, to the vulgar, beyond reasonable cavil. To Father de Régnon, of the extremely learned and intelligent Society of Jesus, the difference between pantheism and Thomism reduces itself to this: 'Pantheism, starting from the notion of an infinite substance which is the plenitude of being, concludes that there can exist no other beings than *the* being; no other realities than the absolute reality.

Thomism, starting from the efficacy of the first cause, tends to reduce more and more the efficacy of second causes, and to replace it by a passivity which receives without producing, which is determined without determining.' To students of architecture, who know equally little about pantheism and about Thomism — or, indeed, for that matter, about architecture, too — the quality that rouses most surprise in Thomism is its astonishingly scientific method. The Franciscans and the Jesuits call it pantheism, but science, too, is pantheism, or has till very recently been wholly pantheistic. Avowedly science has aimed at nothing but the reduction of multiplicity to unity, and has excommunicated, as though it were itself a Church, any one who doubted or disputed its object, its method, or its results. The effort is as evident and quite as laborious in modern science, starting as it does from multiplicity, as in Thomas Aquinas, who started from unity; and it is necessarily less successful, for its true aims, as far as it is science and not disguised religion, were equally attained by reaching infinite complexity; but the assertion or assumption of ultimate unity has characterized the Law of Energy as emphatically as it has characterized the definition of God in theology. If it is a reproach to Saint Thomas, it is equally a reproach to Clerk-Maxwell. In truth, it is what men most admire in both — the power of broad and lofty generalization.

Under any conceivable system the process of getting God and man under the same roof — of bringing two independent energies under the same control — required a painful effort, as science has much cause to know. No doubt, many good Christians and some heretics have been shocked at the tour de force by which they felt themselves suddenly seized, bound hand and foot, attached to each other, and dragged into the Church, without consent or consultation. To religious mystics, whose scepticism concerned chiefly themselves and their own existence, Saint Thomas's man seemed hardly worth herding, at so much expense and trouble, into a Church where he was not eager to go. True religion felt the nearness of God without caring to see the mechanism. Mystics like Saint Bernard, Saint Francis,

Saint Bonaventure, or Pascal had a right to make this objection since they got into the Church, so to speak, by breaking through the windows; but society at large accepted and retains Saint Thomas's man much as Saint Thomas delivered him to the Government; a two-sided being, free or unfree, responsible or irresponsible, an energy or a victim of energy, moved by choice or moved by compulsion, as the interests of society seemed for the moment to need. Certainly Saint Thomas lavished no excess of liberty on the man he created, but still he was more generous than the State has ever been. Saint Thomas asked little from man, and gave much; even as much freedom of will as the State gave or now gives; he added immortality hereafter and eternal happiness under reasonable restraints; his God watched over man's temporal welfare far more anxiously than the State has ever done, and assigned him space in the Church which he never can have in the galleries of Parliament or Congress; more than all this, Saint Thomas and his God placed man in the centre of the universe, and made the sun and the stars for his uses. No statute law ever did as much for man, and no social reform ever will try to do it; yet man bitterly complained that he had not his rights, and even in the Church is still complaining, because Saint Thomas set a limit, more or less vague, to what the man was obstinate in calling his freedom of will.

Thus Saint Thomas completed his work, keeping his converging lines clear and pure throughout, and bringing them together, unbroken, in the curves that gave unity to his plan. His sense of scale and proportion was that of the great architects of his age. One might go on studying it for a lifetime. He showed no more hesitation in keeping his Deity in scale than in adjusting man to it. Strange as it sounds, although man thought himself hardly treated in respect to freedom, yet, if freedom meant superiority, man was in action much the superior of God, Whose freedom suffered, from Saint Thomas, under restraints that man never would have tolerated. Saint Thomas did not allow God even an undetermined will; He was pure Act, and as such He could not change. Man alone was allowed, in act, to change direction. What was more curious

till, man might absolutely prove his freedom by refusing to move at all; if he did not like his life he could stop it, and habitually did so, or acquiesced in its being done for him; while God could not commit suicide or even cease for a single instant His continuous action. If man had the singular fancy of making himself absurd — a taste confined to himself but attested by evidence exceedingly strong — he could be as absurd as he liked; but God could not be absurd. Saint Thomas did not allow the Deity the right to contradict Himself, which is one of man's chief pleasures. While man enjoyed what was, for his purposes, an unlimited freedom to be wicked — a privilege which, as both Church and State bitterly complained and still complain, he has outrageously abused — God was Goodness, and could be nothing else. While man moved about his relatively spacious prison with a certain degree of ease, God, being everywhere, could not move. In one respect, at least, man's freedom seemed to be not relative but absolute, for his thought was an energy paying no regard to space or time or order or object or sense; but God's thought was His act and will at once; speaking correctly, God could not think; He is. Saint Thomas would not, or could not, admit that God was Necessity, as Abélard seems to have held, but he refused to tolerate the idea of a divine maniac, free from moral obligation to himself. The atmosphere of Saint Louis surrounds the God of Saint Thomas, and its pure ether shuts out the corruption and pollution to come — the Valois and Bourbons, the Occams and Hobbes's, the Tudors and the Medicis, of an enlightened Europe.

The theology turns always into art at the last, and ends in aspiration. The spire justifies the church. In Saint Thomas's Church, man's free will was the aspiration to God, and he treated it as the architects of Chartres and Laon had treated their famous flèches. The square foundation-tower, the expression of God's power in act — His Creation — rose to the level of the Church façade as a part of the normal unity of God's energy; and then, suddenly, without show of effort, without break, without logical violence, became a many-sided, volun-

tary, vanishing human soul, and neither Villard de Honnecourt nor Duns Scotus could distinguish where God's power ends and man's free will begins. All they saw was the soul vanishing into the skies. How it was done, one does not care to ask; in a result so exquisite, one has not the heart to find fault with 'adresse.'

About Saint Thomas's theology we need not greatly disturb ourselves; it can matter now not much, whether he put more pantheism than the law allowed or more materialism than Duns Scotus approved — or less of either — into his universe, since the Church is still on the spot, responsible for its own doctrines; but his architecture is another matter. So scientific and structural a method was never an accident or the property of a single mind even with Aristotle to prompt it. Neither his Church nor the architect's church was a sketch, but a completely studied structure. Every relation of parts, every disturbance of equilibrium, every detail of construction was treated with infinite labour, as the result of two hundred years of experiment and discussion among thousands of men whose minds and whose instincts were acute, and who discussed little else. Science and art were one. Thomas Aquinas would probably have built a better cathedral at Beauvais than the actual architect who planned it; but it is quite likely that the architect might have saved Thomas some of his errors, as pointed out by the Councils of 1276. Both were great artists; perhaps in their professions, the greatest that ever lived; and both must have been great students beyond their practice. Both were subject to constant criticism from men and bodies of men whose minds were as acute and whose learning was as great as their own. If the Archbishop of Canterbury and the Bishop of Paris condemned Thomas, the Bernardines had, for near two hundred years, condemned Beauvais in advance. Both the 'Summa Theologiae' and Beauvais Cathedral were excessively modern, scientific, and technical, marking the extreme points reached by Europe on the lines of scholastic science. This is all we need to know. If we like, we can go on to study, inch by inch, the slow decline of the art. The essence of it — the despotic central idea — was that of organic unity both in the thought and the build-

ng. From that time, the universe has steadily become more omplex and less reducible to a central control. With as much bstinacy as though it were human, it has insisted on expanding ts parts; with as much elusiveness as though it were feminine, t has evaded the attempt to impose on it a single will. Modern cience, like modern art, tends, in practice, to drop the dogma of organic unity. Some of the mediaeval habit of mind survives, ut even that is said to be yielding before the daily evidence of increasing and extending complexity. The fault, then, was ot in man, if he no longer looked at science or art as an organic whole or as the expression of unity. Unity turned itself into complexity, multiplicity, variety, and even contradiction. All experience, human and divine, assured man in the thirteenth century that the lines of the universe converged. How was he o know that these lines ran in every conceivable and inconceivable direction, and that at least half of them seemed to diverge from any imaginable centre of unity! Dimly conscious hat his Trinity required in logic a fourth dimension, how was he schoolman to supply it, when even the mathematician of oday can only infer its necessity? Naturally man tended to ose his sense of scale and relation. A straight line, or a combination of straight lines, may have still a sort of artistic unity, but what can be done in art with a series of negative symbols? Even f the negative were continuous, the artist might express at least negation; but supposing that Omar's kinetic analogy of the all and the players turned out to be a scientific formula! — upposing that the highest scientific authority, in order to btain any unity at all, had to resort to the Middle Ages for an maginary demon to sort his atoms! — how could art deal with uch problems, and what wonder that art lost unity with hilosophy and science! Art had to be confused in order to express confusion; but perhaps it was truest, so.

Some future summer, when you are older, and when I have eft, like Omar, only the empty glass of my scholasticism for you o turn down, you can amuse yourself by going on with the story fter the death of Saint Louis, Saint Thomas, and William of Lorris, and after the failure of Beauvais. The pathetic interest

of the drama deepens with every new expression, but at least you can learn from it that your parents in the nineteenth century were not to blame for losing the sense of unity in art. As early as the fourteenth century, signs of unsteadiness appeared, and, before the eighteenth century, unity became only a reminiscence. The old habit of centralizing a strain at one point, and then dividing and subdividing it, and distributing it on visible lines of support to a visible foundation, disappeared in architecture soon after 1500, but lingered in theology two centuries longer, and even, in very old-fashioned communities, far down to our own time; but its values were forgotten, and it survived chiefly as a stock jest against the clergy. The passage between the two epochs is as beautiful as the Slave of Michael Angelo; but, to feel its beauty, you should see it from above, as it came from its radiant source. Truth, indeed, may not exist; science avers it to be only a relation; but what men took for truth stares one everywhere in the eye and begs for sympathy. The architects of the twelfth and thirteenth centuries took the Church and the universe for truths, and tried to express them in a structure which should be final. Knowing by an enormous experience precisely where the strains were to come, they enlarged their scale to the utmost point of material endurance, lightening the load and distributing the burden until the gutters and gargoyles that seem mere ornament, and the grotesques that seem rude absurdities, all do work either for the arch or for the eye; and every inch of material, up and down, from crypt to vault, from man to God, from the universe to the atom, had its task, giving support where support was needed, or weight where concentration was felt, but always with the condition of showing conspicuously to the eye the great lines which led to unity and the curves which controlled divergence; so that, from the cross on the flèche and the keystone of the vault, down through the ribbed nervures, the columns, the windows, to the foundation of the flying buttresses far beyond the walls, one idea controlled every line; and this is true of Saint Thomas's Church as it is of Amiens Cathedral. The method was the same for both, and the result was an art marked by singular unity,

which endured and served its purpose until man changed his attitude toward the universe. The trouble was not in the art or the method or the structure, but in the universe itself which presented different aspects as man moved. Granted a Church, Saint Thomas's Church was the most expressive that man has made, and the great Gothic cathedrals were its most complete expression.

Perhaps the best proof of it is their apparent instability. Of all the elaborate symbolism which has been suggested for the Gothic cathedral, the most vital and most perfect may be that the slender nervure, the springing motion of the broken arch, the leap downwards of the flying buttress — the visible effort to throw off a visible strain — never let us forget that Faith alone supports it, and that, if Faith fails, Heaven is lost. The equilibrium is visibly delicate beyond the line of safety; danger lurks in every stone. The peril of the heavy tower, of the restless vault, of the vagrant buttress; the uncertainty of logic, the inequalities of the syllogism, the irregularities of the mental mirror — all these haunting nightmares of the Church are expressed as strongly by the Gothic cathedral as though it had been the cry of human suffering, and as no emotion had ever been expressed before or is likely to find expression again. The delight of its aspirations is flung up to the sky. The pathos of its self-distrust and anguish of doubt is buried in the earth as its last secret. You can read out of it whatever else pleases your youth and confidence; to me, this is all.

THE END

Index
